

Supplementary Figure. 1. Scatter plots of the \log_{10} normalized protein intensities demonstrating the variance of protein expression level between biological replicates. R2 indicates the correlation coefficient between samples. (A) Correlation between sham operated samples. (B) Correlation between 2 DPA samples. (C) Correlation between 7 DPA samples. (D) Correlation between 14 DPA samples.

Supplementary Figure 2. GO annotation analysis on the 4003 protein groups revealed multiple significantly annotations were enriched. (A) Molecular Function. (B) Biological Process.

Supplementary Figure 2A.

Supplementary Figure 2B.
