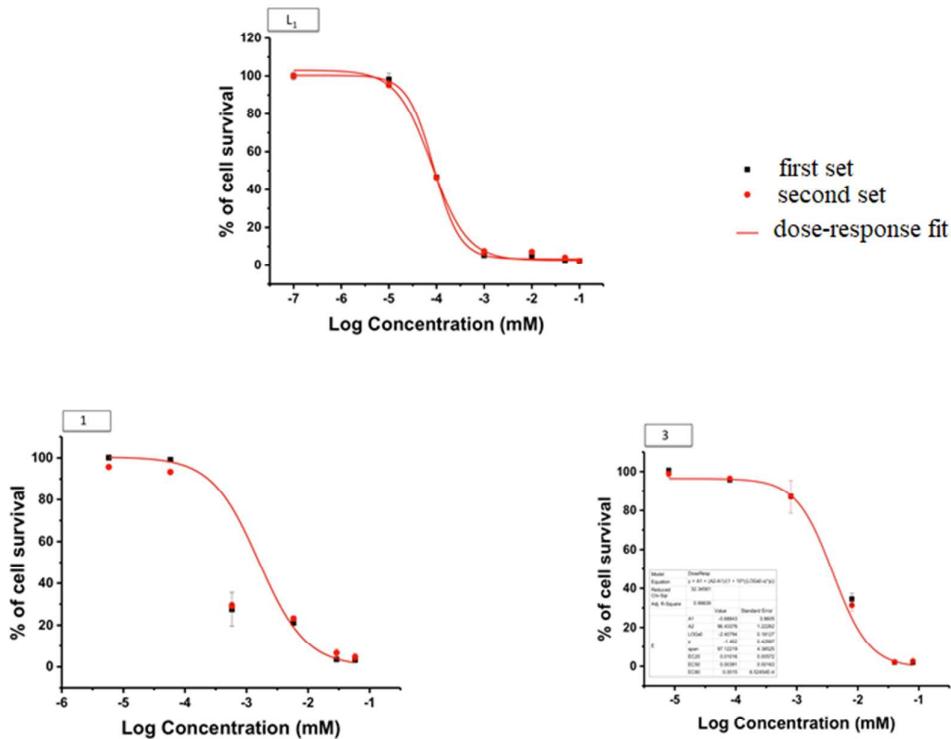

Figure S7. Examples of dose response curves for ligand **L₁** and related osmium **1** and ruthenium **3** complexes in the A2780 human ovarian cancer cell line. Experiments included 48 h of pre-incubation time, 24 h of drug exposure and 72 h of recovery time in drug-free medium. IC₅₀ values, as the inflection point of the dose-response curves, were obtained from triplicates of duplicates (black and red data sets) and their standard deviations were calculated.
