Chemicals and reagents. All native and mass labelled standard solutions (PFAC-MXB, FOSA, TPFOA, br-PFOS and MPFAC-MXA) were purchased from Wellington Laboratories (Canada), except eight carbon chlorinated polyfluoroalkane ether sulfonic acid (C8 Cl-PFESA), which was purified from commercial product (Shanghai Synica Co., Ltd.). The full name and abbreviation for all compounds were listed in the Table S2. HPLC grade methanol was obtained from Fisher Scientific (Pittsburgh, PA, USA). Ammonium acetate (NH₄OAc, >97%), ammonium hydroxide (v/v, 50%), acetic acid (>99.8%), formic acid (>98%) were obtained from Alfa Aesar (Ward Hill, MA, USA). High purity water (> 18.2 MΩ cm⁻¹) was used in the present study, which was prepared using a Milli-Q Advantage A10 system (Millipore, USA). Oasis WAX cartridges (150mg, 6cc) and glass fiber filter membranes (0.7μm, 47mm i.d.) were obtained from Waters Co. (Milford, MA, USA) and Sartorius Stedim Biotech (Goettingen, Germany), respectively.

Instrumental analysis for confirmation of PFBA and PFPeA. The presence of PFBA and PFPeA was confirmed using HPLC with a dual pump, autosampler and column compartment (Ultimate 3000, Thermo Fisher Scientific) coupled with an Orbitrap Fusion MS system (Thermo Fisher Scientific, Waltham, MA) and *Xcalibur* software (Thermo Fisher). An Acclaim 120 C18 column (5 μm, 4.6 mm×150 mm) was used to separate targets with an injection volume of 10μL. The mixture of methanol (eluent A) and 50mM ammonium acetate in water (eluent B) was used as mobile phase in a gradient program described as follows. The composition of eluent B started at 28% and decreased to 5% within 4 min, and then held at 5% for 3 min, followed by increasing to 28% within 0.1 min, and held at 28% until 10 min to re-equilibrate the column. The flow rate was 1.0 ml/min. The Orbitrap MS was operated in negative ESI mode and full scan mode (50-700 m/z) with a resolution of 120000. Data were acquired using *Xcalibur* software. The operation parameters were as follows: the capillary voltage at 2500V, ion transfer tube and vaporizer temperatures at 350 and 200°C, the sheath,

aux, and sweep gas flow rates at 35, 10 and 1 Arb, the higher-energy collision dissociation (HCD) energy at 43%. Figure S1 shows the chromatogram of water and blood extract sample with extracting ion at $m/z=212.9780$ (PFBA) and 262.9760 (PFPeA) with a mass accuracy of 5 ppm.

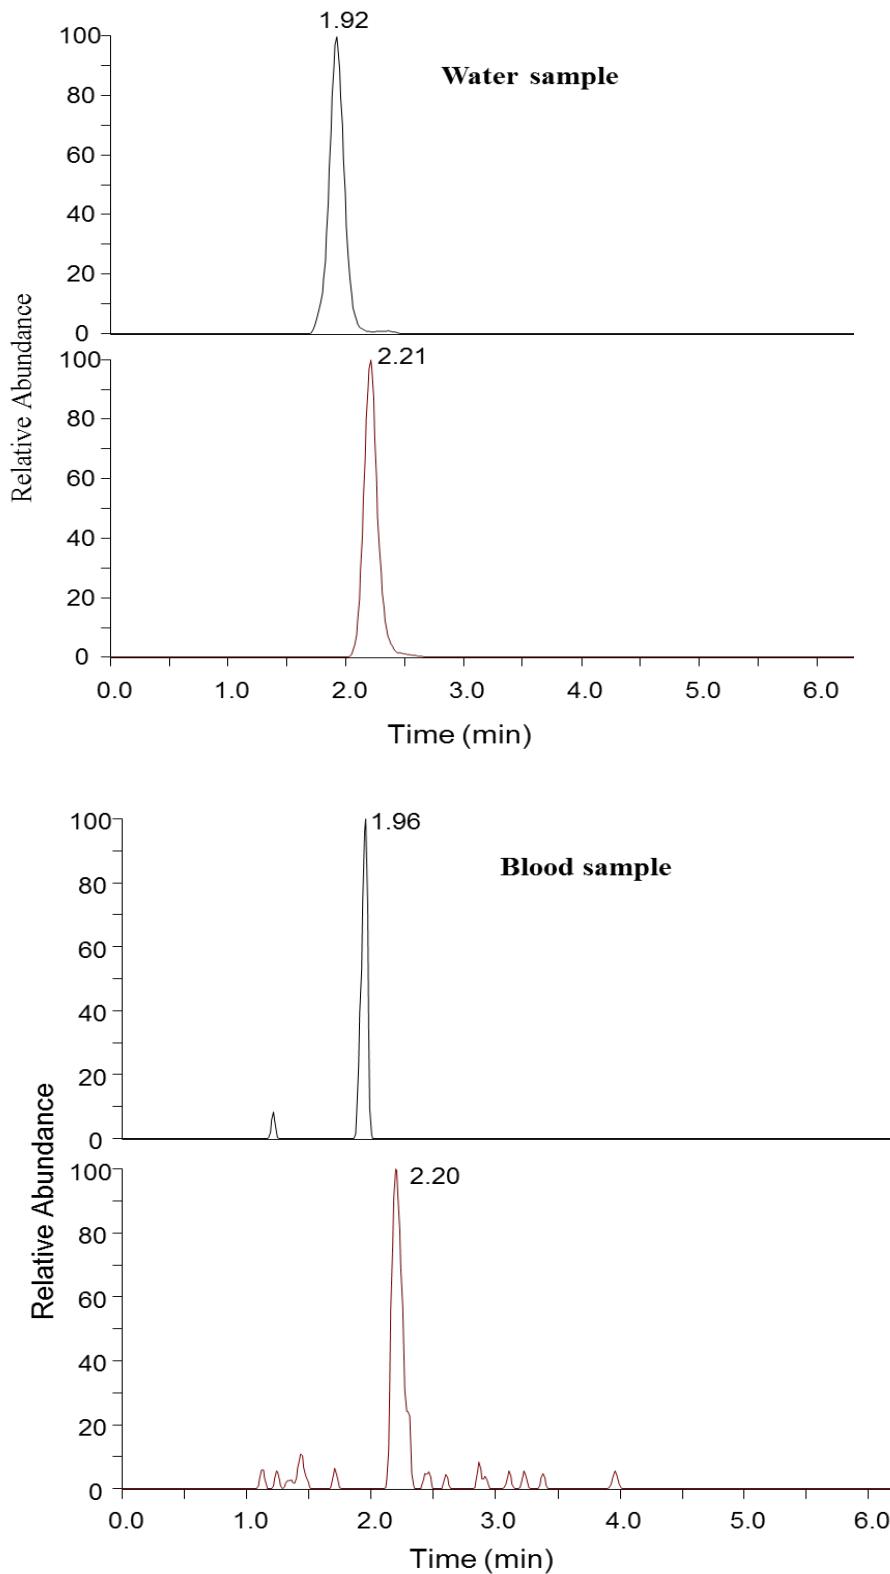

Figure S1. Chromatograms of water and blood extract samples in HR-MS at $m/z=212.9780$ (PFBA, in black) and 262.9760 (PFPeA, in red) with a mass accuracy of 5 ppm (C18 column)

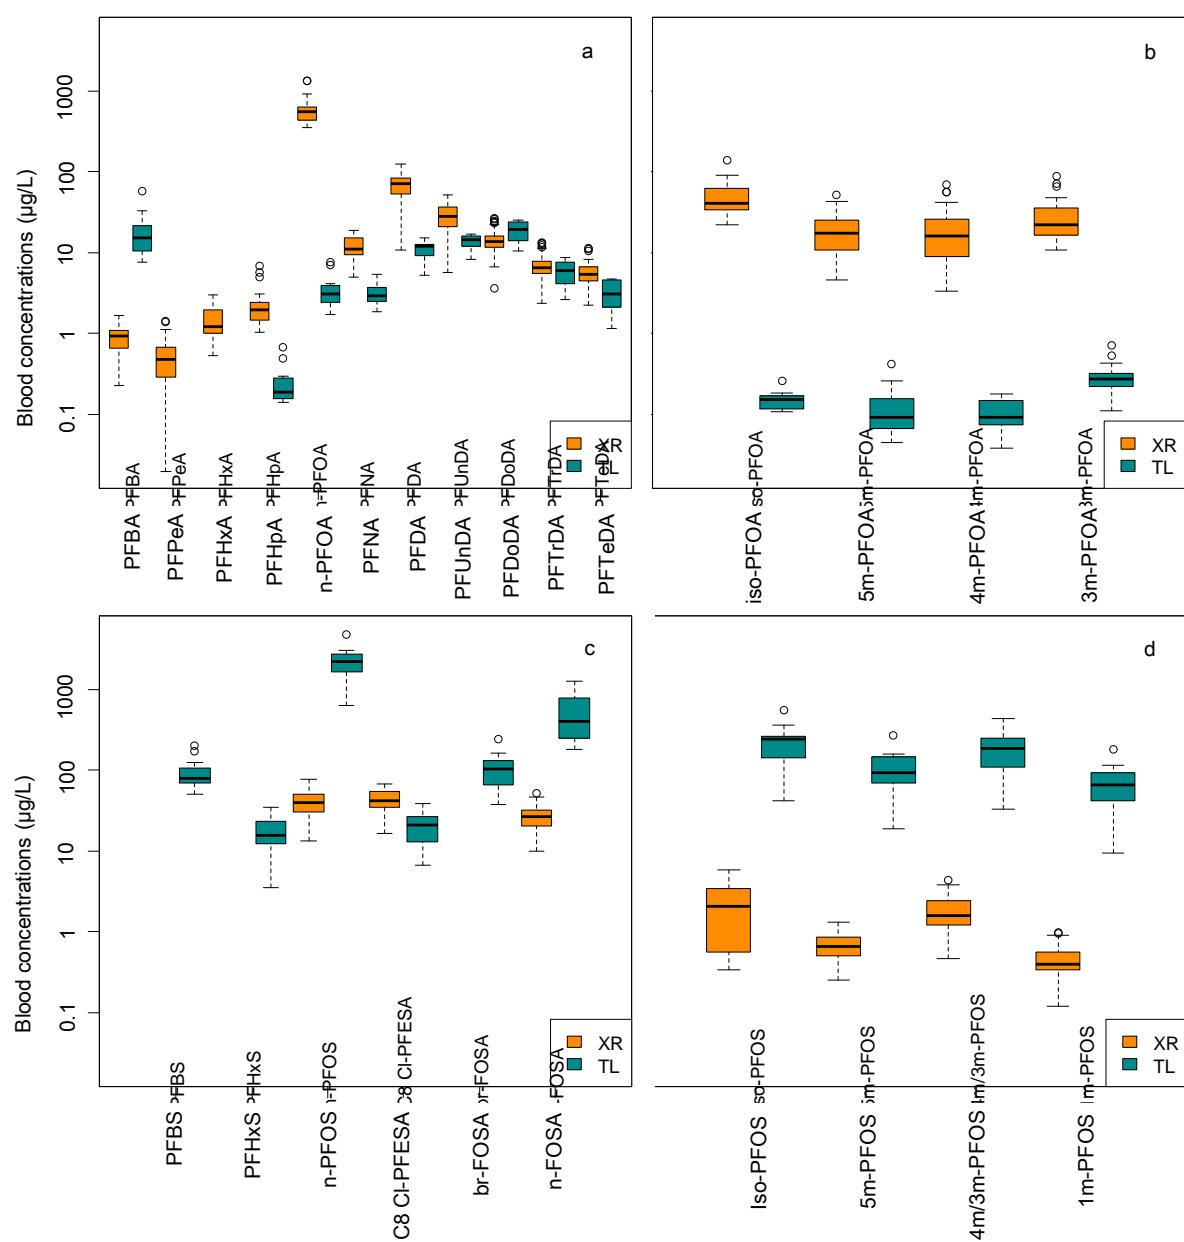

Figure S2a–d. Box-whisker plots of PFAS concentrations in blood of fish from XR (orange) and TL (blue). Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values are indicated as circles. a: PFCAs; b: br-PFOA isomers; c: PFSAs, FOSA and C8 Cl-PFESA; d: br-PFOS isomers

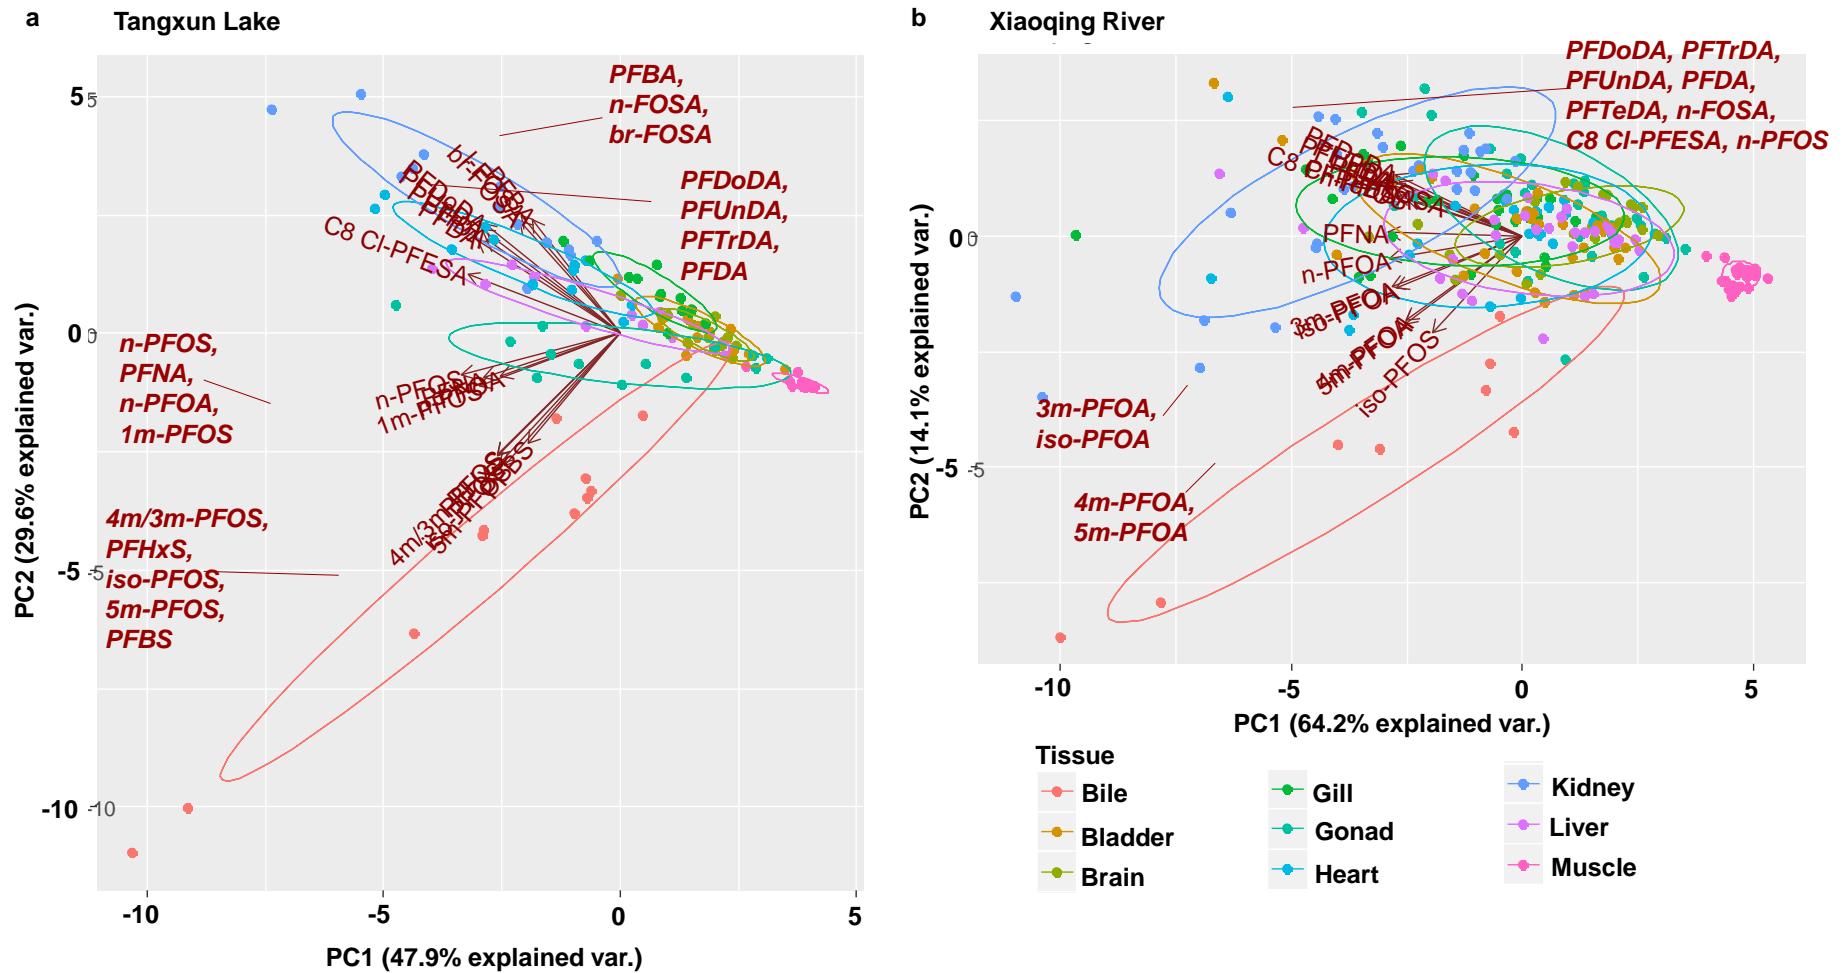

Figure S3. PCA plots for TBRs TL (a) and XR (b)

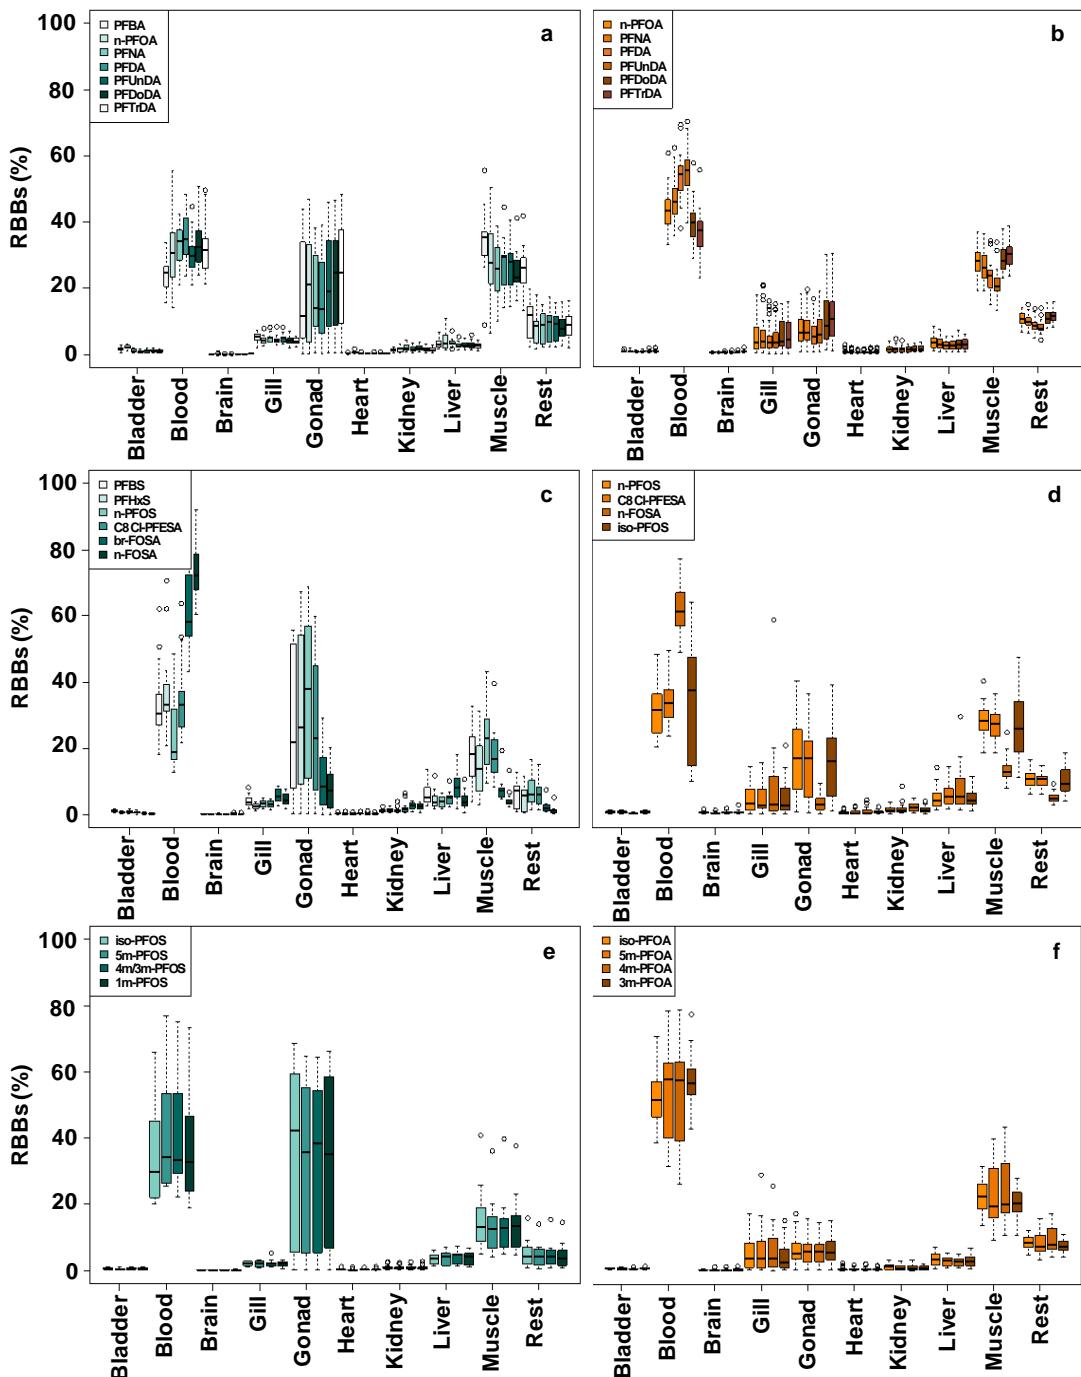

Figure S4a-f. RBBs of PFASs in TL (blue) and XR (orange). Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles. a and b: C3, C7-C13 PFCAs; c and d: PFBS, PFHxS, n-PFOS, C8 Cl-PFESA, br-FOSA and n-FOSA; e and f: br-PFOS and br-PFOA isomers.

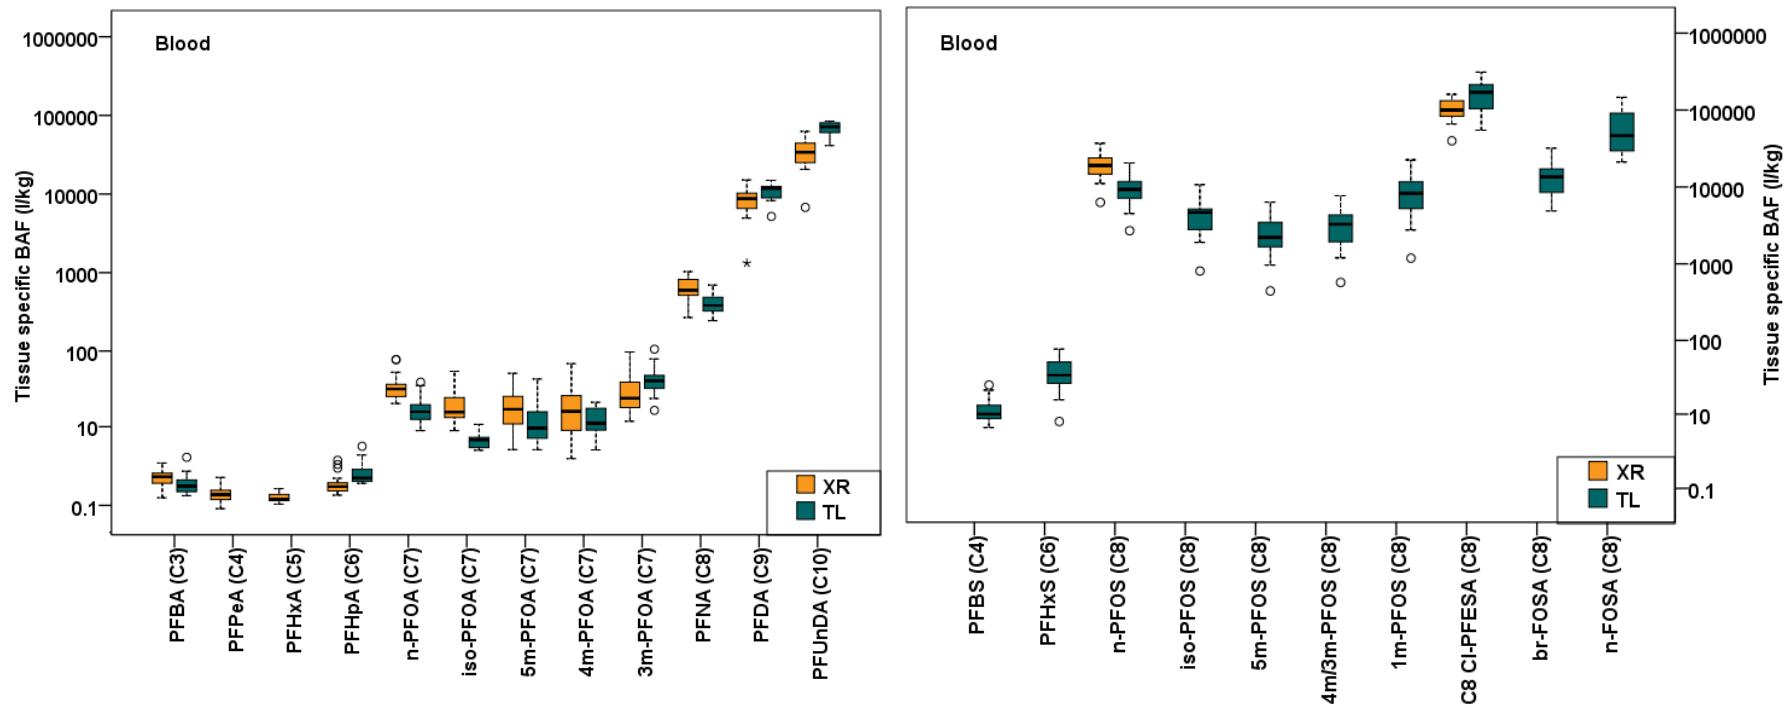

Figure S5. Tissue-specific BAF for blood with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

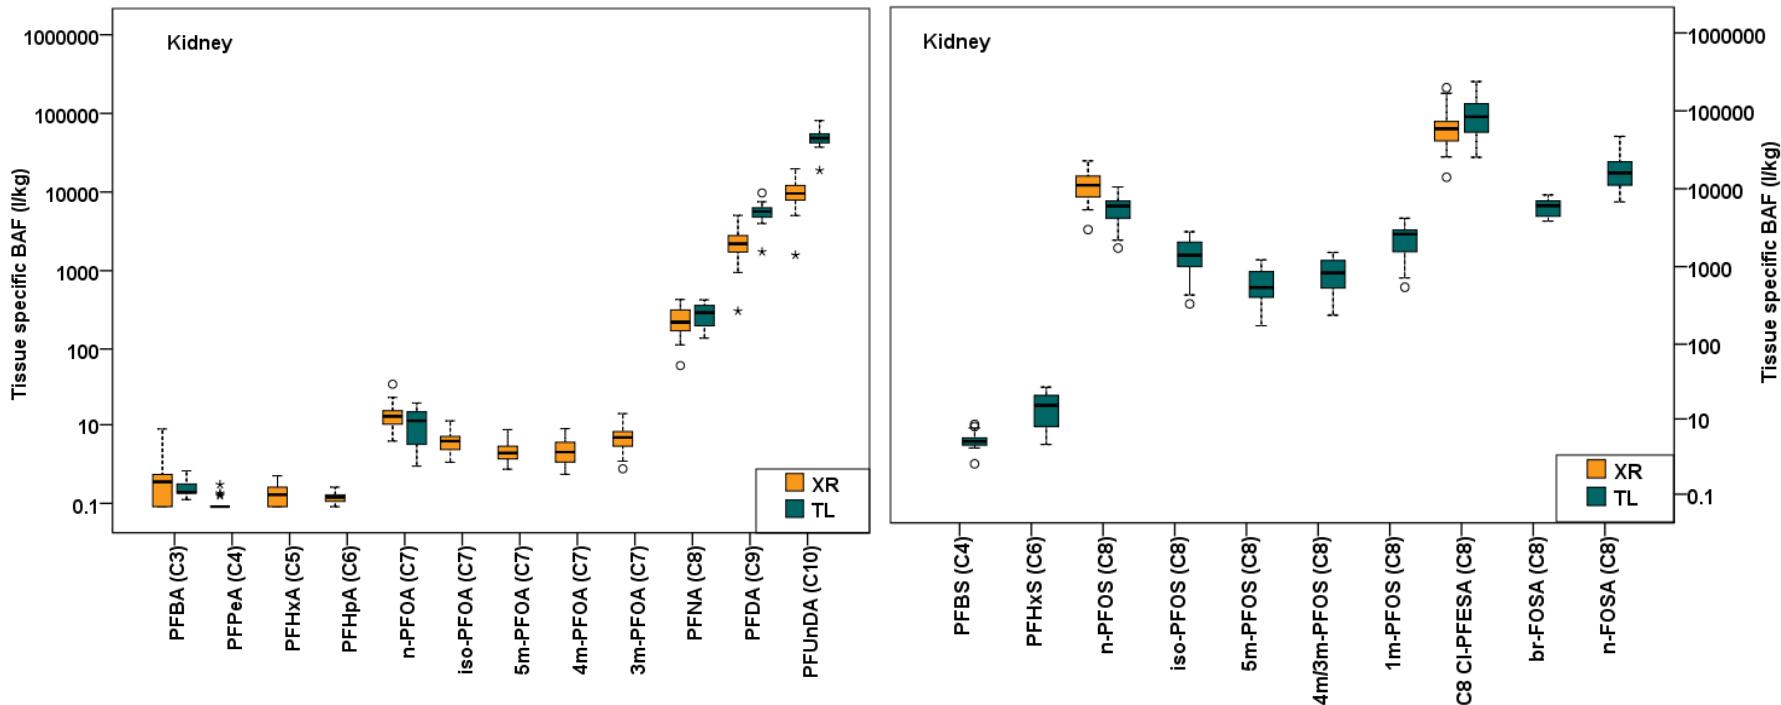

Figure S6. Tissue-specific BAF for kidney with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

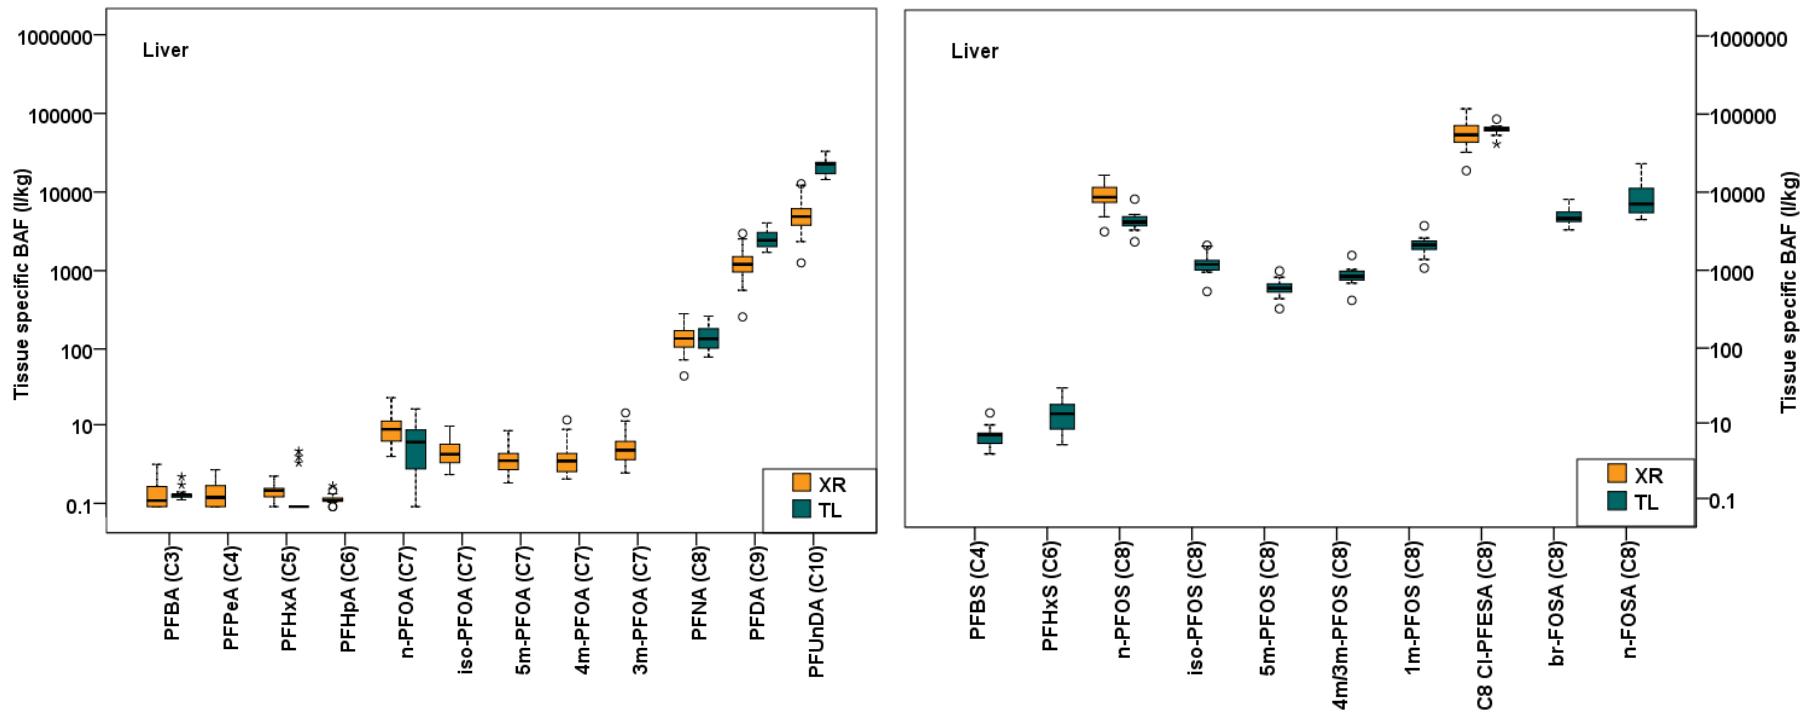

Figure S7. Tissue-specific BAF for liver with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

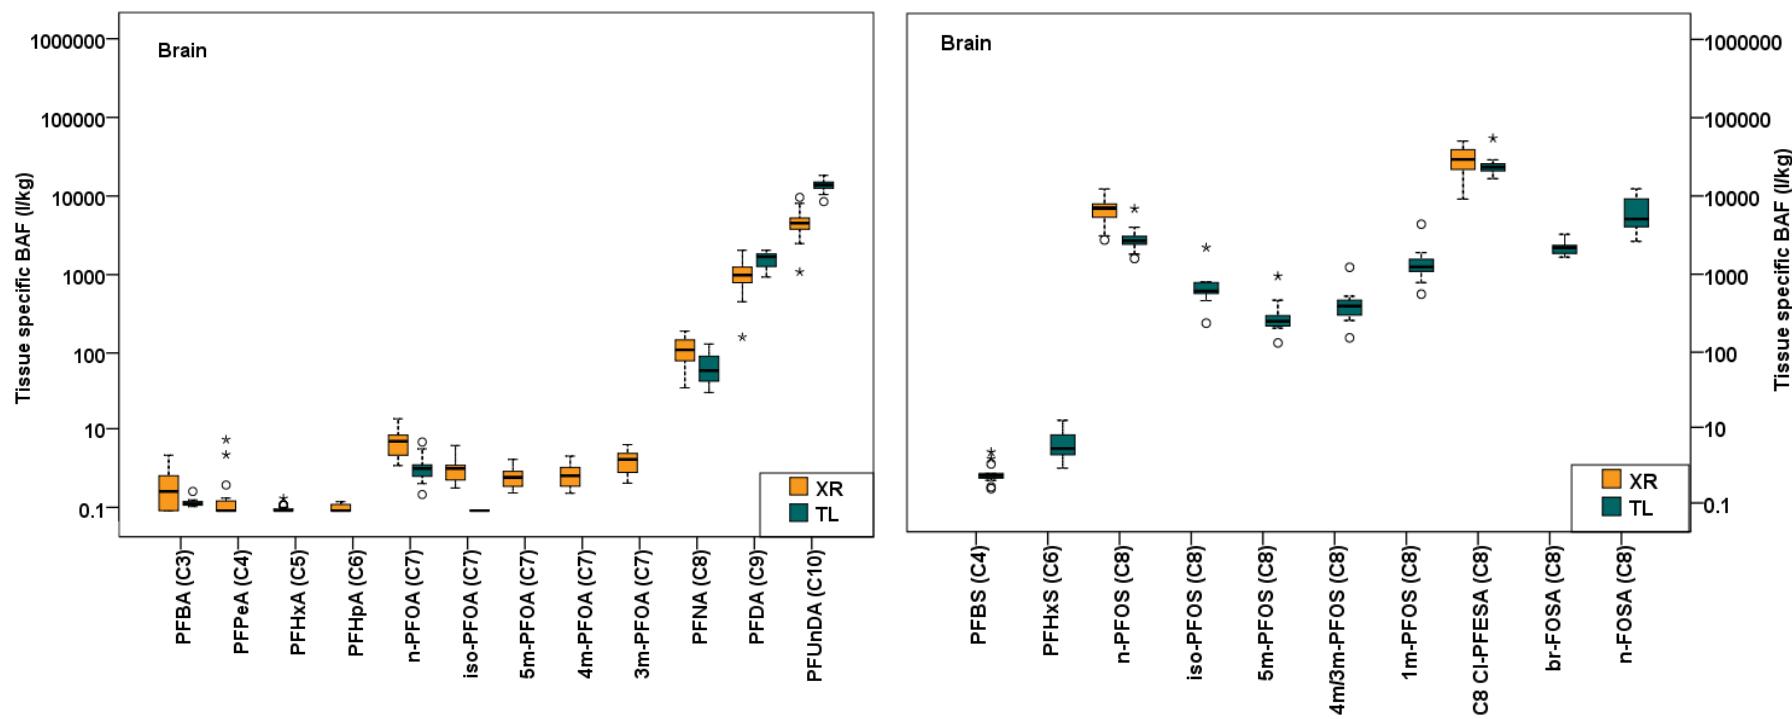

Figure S8. Tissue-specific BAF for brain with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

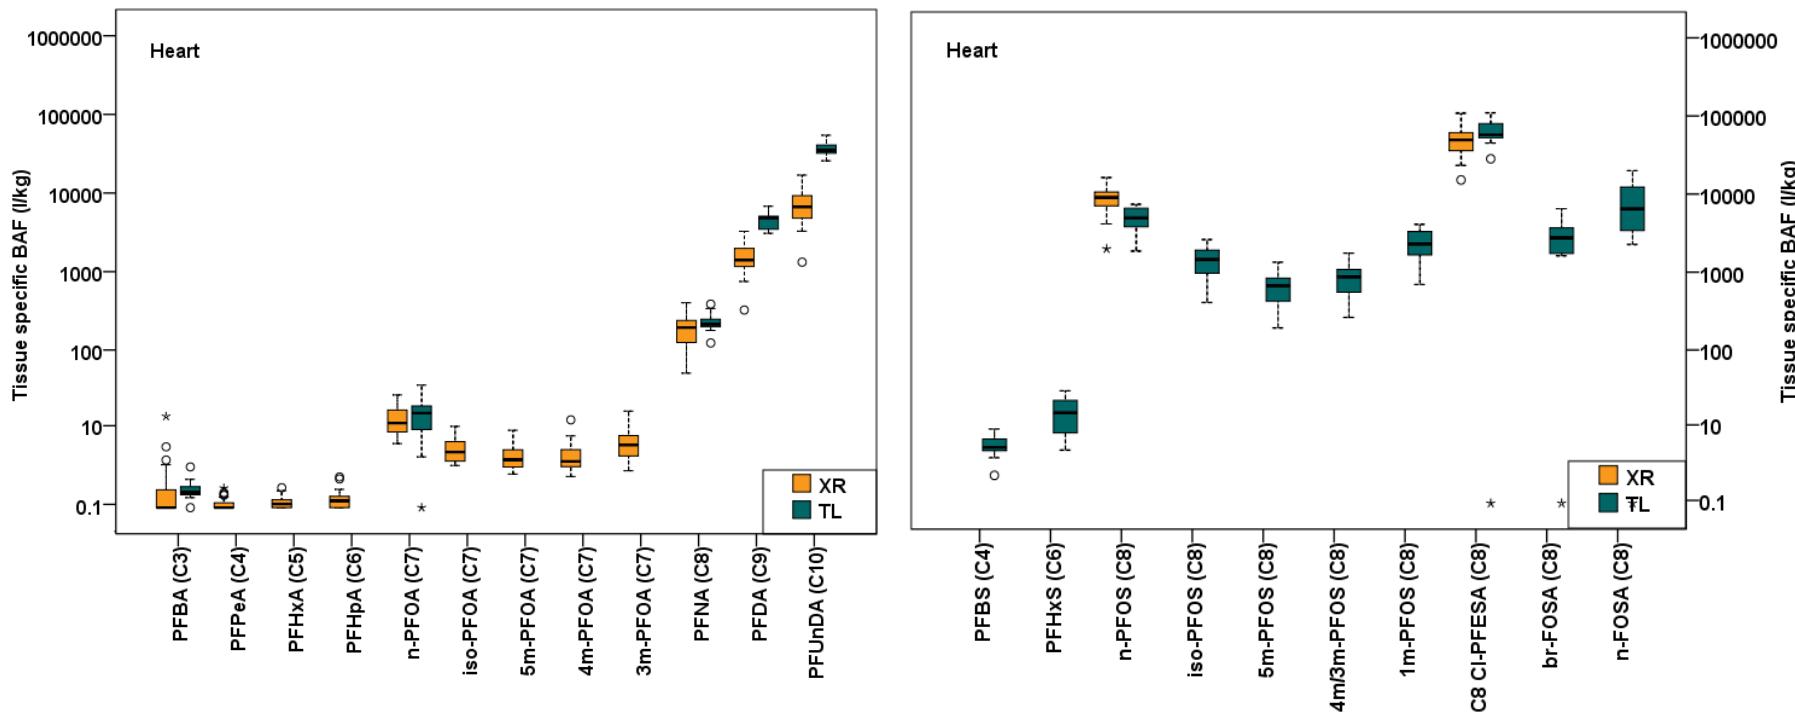

Figure S9. Tissue-specific BAF for heart with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

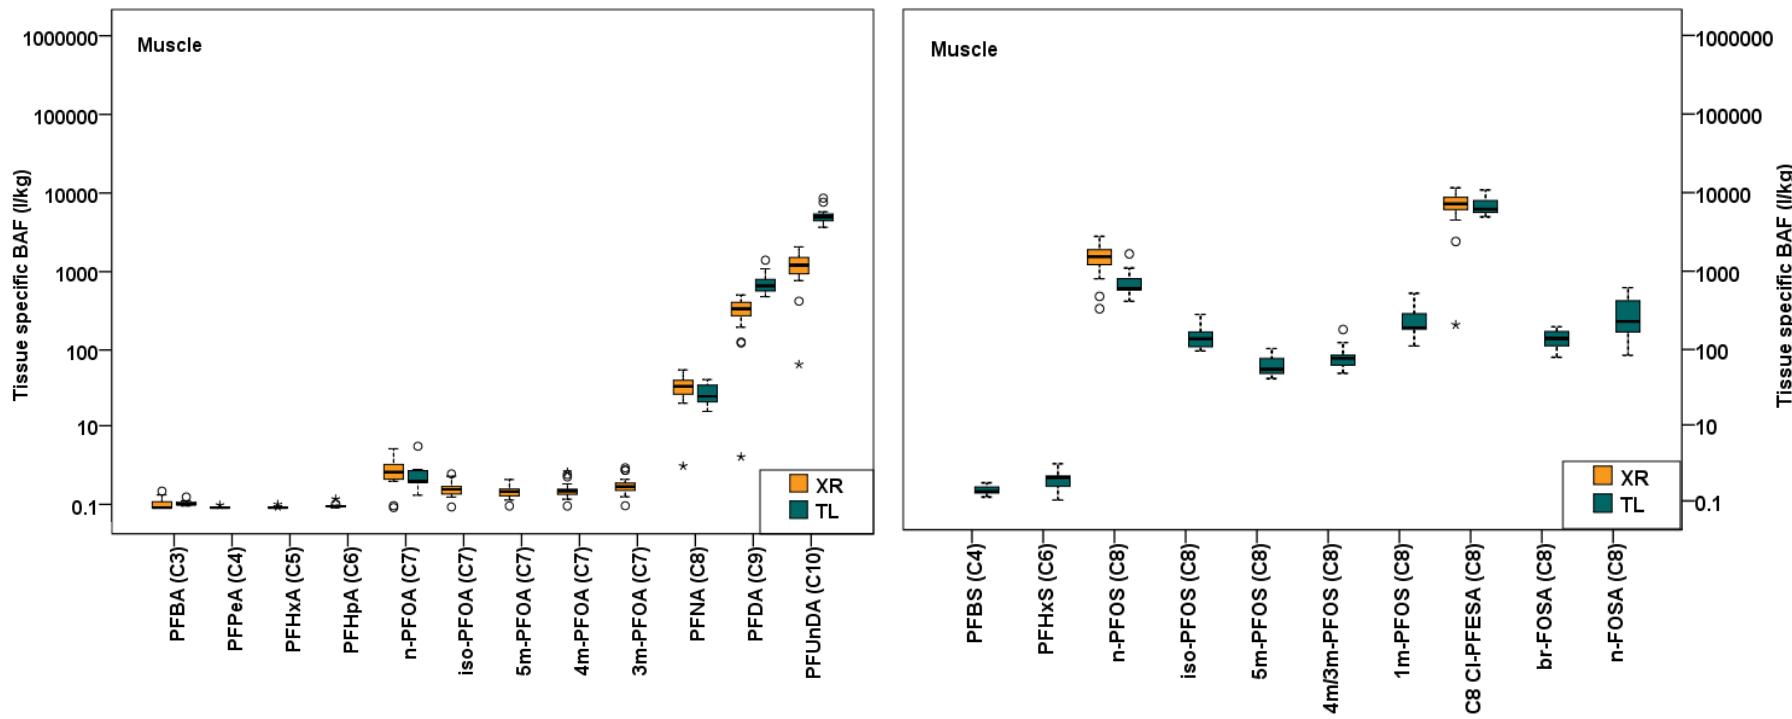

Figure S10. Tissue-specific BAF for muscle with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

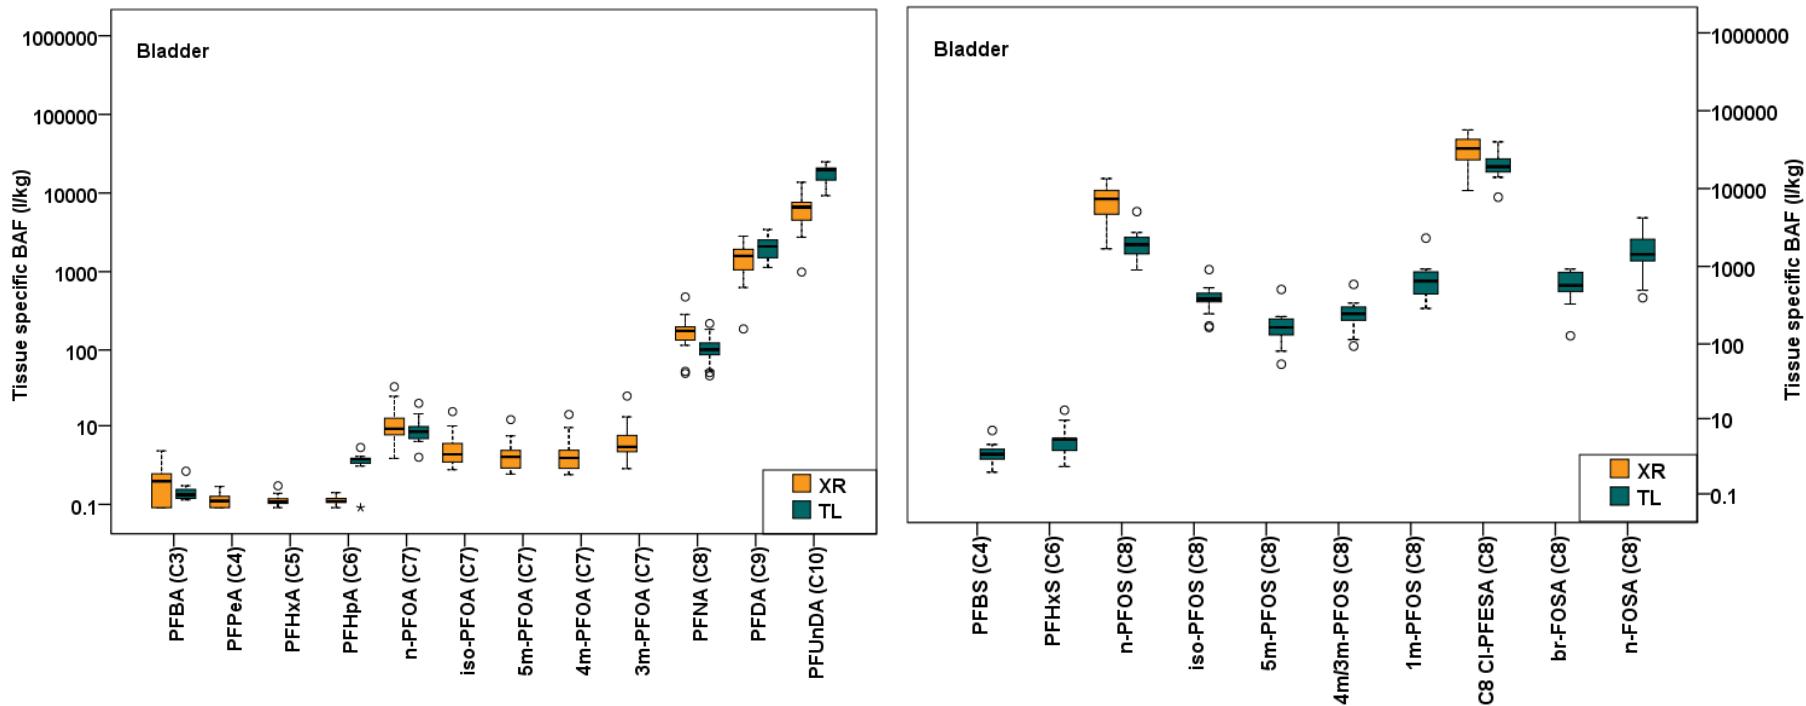

Figure S11. Tissue-specific BAF for bladder with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

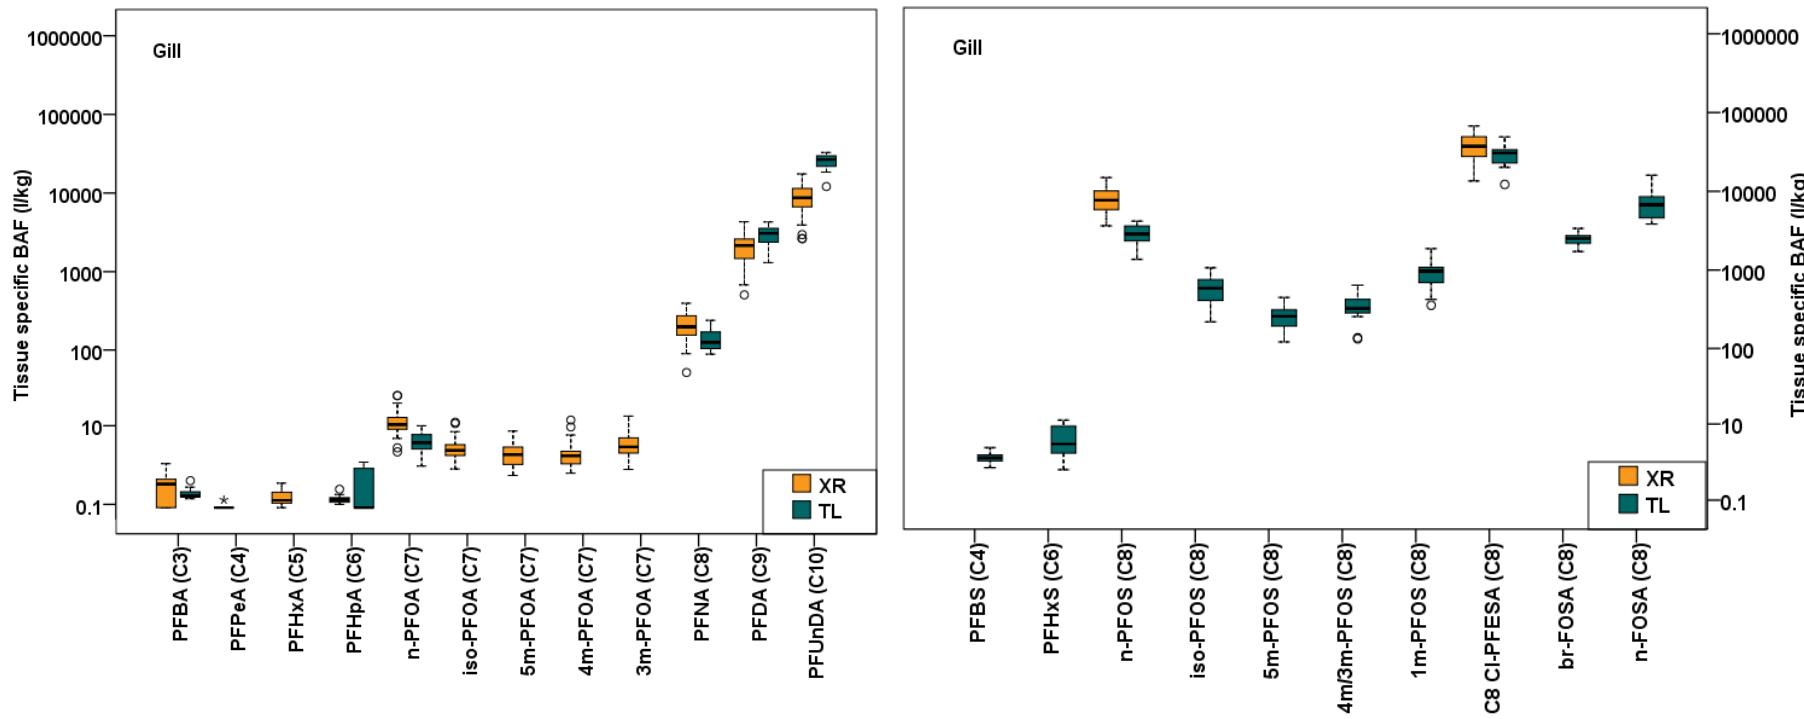

Figure S12. Tissue-specific BAF for gill with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.

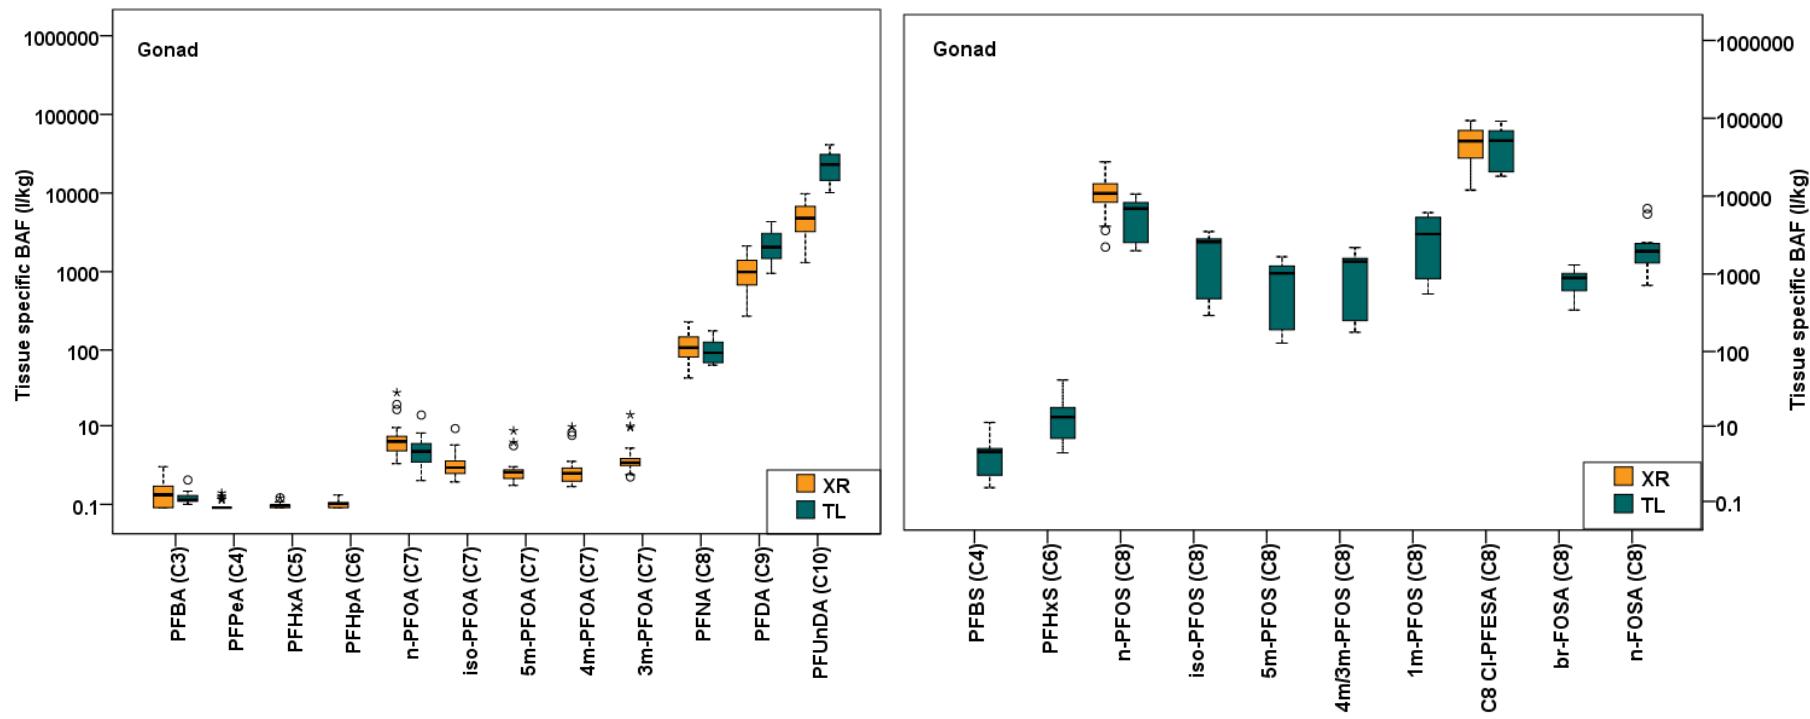

Figure S13. Tissue-specific BAF for gonads with varying chain-length, isomeric structures and functional groups for XR (orange) and TL (blue).

Data with <80% detected concentrations in all tissues were excluded. Boxes indicate 25th, 50th and 75th percentiles and whiskers indicate 5th and 95th percentiles. Extreme values in the data sets are indicated as circles.
