## Supporting Information

# CsF-Catalyzed transannulation reaction of oxazolones: diastereoselective synthesis of diversified trans- N -(6-0xo-1,4,5,6-tetrahydropyrimidin-5-yl)benzamides with arylidene azlactones and amidines 

Golnaz Parhizkar, ${ }^{\dagger}$ Ahmad Reza Khosropour,,* ${ }^{\dagger}$ Iraj Mohammadpoor-Baltork,*, ${ }^{\dagger}$ Elahehnaz Parhizkar, ${ }^{\dagger}$ Hadi Amiri Rudbari ${ }^{\dagger}$<br>${ }^{\dagger}$ Department of Chemistry, University of Isfahan, Isfahan 81746-73441, Iran<br>${ }^{\dagger}$ Department of Pharmaceutics, School of Pharmacy, Shiraz University of Medical Sciences, Shiraz 71468-64685, Iran<br>arkhosropour@chem.ui.ac.ir imbaltork@sci.ui.ac.ir

## Contents:

1. General Information ..... S2
2. Procedures and Analytical Data ..... S2
3. Antimicrobial Assay ..... S21
4. ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR Spectra of the Products. ..... S24
5. Crystallographic Data for Compound $\mathbf{3}\{3,1\}$ ..... S34
6. References ..... S36

## 1. General Information

Chemicals were purchased from Fluka and Merck chemical companies. The azlactone ${ }^{1}$ and amidine ${ }^{2}$ skeletons were accessed following literature protocols. The microwave system used in these experiments includes the following items: Micro-SYNTH labstation, equipped with a glass door, a dual magnetron system with pyramid shaped diffuser, 1000 W delivered power, exhaust system, magnetic stirrer, 'quality pressure' sensor for flammable organic solvents, and a ATCFO fiber optic system for automatic temperature control. The progress of the reactions was monitored by thin layer chromatography (TLC) using 0.25 mm pre-coated silica gel $\mathrm{HF}_{254}$ plates. Silica gel (230-400 mesh, silicscycle) was used for column chromatography. Melting points were determined using Stuart Scientific SMP2 apparatus. FT-IR spectra were recorded on a Nicolet-Impact 400D instrument in the range of $400-4000 \mathrm{~cm}^{-1} .{ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR spectra were recorded on a Bruker Avance 400 MHz Fourier-transform spectrometer. Coupling constants were reported in hertz. Elemental analysis was performed on a LECO, CHNS-932 analyzer. High resolution mass spectrometry (HRMS) spectra were recorded using electrospray ionization with a time-of-flight mass analyzer (ESI-TOF).

## 2. Procedures and Analytical Data

## General Procedure for the Preparation of Compounds 3\{1,1\}-3\{16,1\}

The reaction mixture of azlactones $\mathbf{1}\{1\}-\mathbf{1}\{16\} \quad(0.20 \mathrm{mmol}), \quad N-(4-$ chlorophenyl)benzimidamide ( $\mathbf{2}\{1\}, 0.046 \mathrm{~g}, 0.20 \mathrm{mmol})$, CsF ( $0.003 \mathrm{~g}, 0.10$ equivalent), and $\mathrm{CH}_{3} \mathrm{CN}(1 \mathrm{~mL})$ was subjected to MW irradiation (200 W, $70^{\circ} \mathrm{C}$ ) for the appropriate time according to Scheme 2. After completion of the reaction as monitored by TLC (eluent: petroleum ether/ethyl acetate, 5:2), the solvent evaporated
under reduced pressure and the mixture was extracted with ethyl acetate ( $3 \times 5 \mathrm{~mL}$ ). The organic layer was dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$, filtered, and concentrated under reduced pressure. Purification by silica gel column chromatography (20-40\% ethyl acetate in petroleum ether) afforded the products $\mathbf{3}\{1,1\}-\mathbf{3}\{16,1\}$.

## General Procedure for the Preparation of Compounds 3\{3,2\}-3\{3,7\}

The reaction mixture of ( $Z$ )-4-(4-chlorobenzylidene)-2-phenyloxazol-5(4H)-one ( $\mathbf{1}\{3\}$, $0.056 \mathrm{~g}, 0.20 \mathrm{mmol}$ ), amidines $\mathbf{2}\{2\}-\mathbf{2}\{7\}(0.20 \mathrm{mmol}), \mathrm{CsF}(0.003 \mathrm{~g}, 0.10$ equivalent $)$, and $\mathrm{CH}_{3} \mathrm{CN}(1 \mathrm{~mL})$ was subjected to MW irradiation $\left(200 \mathrm{~W}, 70^{\circ} \mathrm{C}\right)$ for the appropriate time according to Scheme 3. After completion of the reaction as monitored by TLC (eluent: petroleum ether/ethyl acetate, 5:2), the solvent evaporated under reduced pressure and the mixture was extracted with ethyl acetate $(3 \times 5 \mathrm{~mL})$. The organic layer was dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$, filtered, and concentrated under reduced pressure. Purification by silica gel column chromatography ( $20-40 \%$ ethyl acetate in petroleum ether) afforded the products $\mathbf{3}\{3,2\}-\mathbf{3}\{3,7\}$.

## 3. Antimicrobial Assay

The in vitro antibacterial activities of the samples were determined by agar disc diffusion method. American Type Culture Collection (ATCC) strains of Escherichia coli (ATCC 25922) as Gram-negative and Bacillus subtilis (ATCC 11778) and clinical isolates of Staphylococcus aureus as Gram-positive bacteria (standard inoculums concentration was 1-1.5 $\times 10^{8}$ c.f.u. $/ \mathrm{mL}$ ) were grown on nutrient broth medium and incubated at $37^{\circ} \mathrm{C}$ for 24 h .

Microorganisms were seeded over sterilized culture medium plates and growth inhibition zones were measured in mm using streptomycin, penicillin, and tetracycline as references antibiotics (positive control). All compounds were dissolved in DMSO in the concentration of $100 \mu \mathrm{~g} / \mathrm{mL}$ with DMSO as negative control.

Minimum Inhibitory Concentration (MIC) assay was determined applying broth dilution method. This assay shows the minimum concentration that inhibits the growth of bacteria completely. The compounds (with the concentrations of $200,100,50,25,12.5$ and $6.25 \mu \mathrm{~g} / \mathrm{mL}$ ) were two fold diluted into nutrient broth medium containing approximately $5 \times 10^{6}$ c.f.u. $/ \mathrm{mL}$ of bacteria cells. Samples incubated at $37^{\circ} \mathrm{C}$ for 24 h and the lowest concentration (highest dilution) was considered as MIC.

According to measured inhibition zones and MIC assay which are summarized in
Table S1, almost all compounds show desirable antibacterial effect.

Table S1. Inhibition Zone ( $\mathrm{mm} \pm \mathbf{S D}$ ) and Minimum Inhibitory Concentration $(\mu \mathrm{g} / \mathrm{mL})$ of Different trans- N -(6-Oxo-1,4,5,6-tetrahydropyrimidin-5yl)benzamides Derivatives Against Selected Bacteria

|  |  |  |  |  |  |  |  |  |  |

The antifungal activity also performed by disk diffusion method on potato dextrose agar medium. Strains of fungi Candida albicans (ATCC 10261) and clinical isolates of Aspergillus flavus ( $2-5 \times 10^{6}$ spores $/ \mathrm{mL}$ ) were incubated 5 days at $35^{\circ} \mathrm{C}$. Synthesized compounds with the concentration of $100 \mu \mathrm{~g} / \mathrm{mL}$ were mixed with agar and allowed to solidify. Fluconazole and nystatin as two antifungal drugs were selected as positive control samples (Table S2).

MIC of fungi was performed as the mentioned method for bacteria with differences in fungal concentration and incubation time. The nutrient broth inoculated with 2-5 $\times 10^{4}$ spores $/ \mathrm{mL}$ and incubated for 5 days at $35^{\circ} \mathrm{C}$ (Table S2).

## 4. ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR Spectra of the Products

${ }^{1} \mathrm{H}$ NMR of $\mathbf{3}\{1,1\}$

${ }^{13} \mathrm{C}$ NMR of $\mathbf{3}\{1,1\}$

${ }^{1} \mathrm{H}$ NMR of $\mathbf{3}\{2,1\}$

${ }^{13} \mathrm{C}$ NMR of $\mathbf{3}\{2,1\}$

${ }^{13} \mathrm{C}$ NMR of $\mathbf{3}\{3,1\}$

${ }^{1}$ H NMR of $\mathbf{3}\{4,1\}$

${ }^{13}$ C NMR of $\mathbf{3}\{4,1\}$

${ }^{13}$ C NMR of $\mathbf{3}\{5,1\}$

${ }^{1} \mathrm{H}$ NMR of $\mathbf{3}\{14,1\}$

${ }^{13} \mathrm{C}$ NMR of $\mathbf{3}\{14,1\}$

${ }^{13} \mathrm{NMR}$ of $3\{15,1\}$
${ }^{13} \mathrm{C}$ NMR of $\mathbf{3}\{16,1\}$

${ }^{13}$ C NMR of $\mathbf{3}\{3,2\}$

${ }^{13} \mathrm{C}$ NMR of $\mathbf{3}\{3,3\}$

${ }^{1}$ H NMR of $\mathbf{3}\{17,1\}$

## 5. Crystallographic Data for Compound 3\{3,1\}

X-ray crystal structure of compound $\mathbf{3}\{3,1\}$ (after purification and crystallization of the major product)

Crystal data and structure refinement for compound $\mathbf{3}\{3,1\}$

| Empirical formula | $\mathrm{C}_{29} \mathrm{H}_{21} \mathrm{Cl}_{2} \mathrm{~N}_{3} \mathrm{O}_{2}$ |  |  |
| :--- | :--- | :--- | :---: |
| Formula weight | 514.10 |  |  |
| Temperature | $298(2) \mathrm{K}$ |  |  |
| Wavelength | $0.71073 \AA$ |  |  |
| Crystal system | Orthorhombic |  |  |
| Space group | Pna2(1) |  |  |
| Unit cell dimensions | $\mathrm{a}=29.879(6) \AA$ | $\alpha=90^{\circ}$ |  |
|  | $\mathrm{b}=10.897(2) \AA$ | $\beta=90^{\circ}$ |  |
|  | $\mathrm{c}=9.1788(18) \AA$ | $\gamma=90^{\circ}$ |  |
| Volume | $2988.5(10) \AA^{3}$ |  |  |
| Z | 4 |  |  |
| Calculated density | $1.317 \mathrm{Mg} / \mathrm{m}^{3}$ |  |  |
| Absorption coefficient | $0.324 \mathrm{~mm}^{-1}$ |  |  |
| F(000) | 1232 |  |  |
| Theta range for data collection | 2.77 to $25.00^{\circ}$ |  |  |

| Limiting indices | $-35<=\mathrm{h}<=35,-12<=\mathrm{k}<=11,-10<=\mathrm{l}<=10$ |
| :--- | :--- |
| Reflections collected / unique | $9566 / 4944[\mathrm{R}(\mathrm{int})=0.0490]$ |
| Completeness to theta $=25.00$ | $98.3 \%$ |
| Refinement method | Full-matrix least-squares on $\mathrm{F}^{2}$ |
| Data / restraints / parameters | $4944 / 1 / 371$ |
| Goodness-of-fit on $\mathrm{F}^{2}$ | 0.931 |
| Final R indices [I>2sigma(I)] | $\mathrm{R} 1=0.0348, \mathrm{wR} 2=0.0580$ |
| R indices (all data) | $\mathrm{R} 1=0.0945, \mathrm{wR} 2=0.0686$ |
| Largest diff. peak and hole | 0.131 and $-0.147 \mathrm{e} . \AA^{-3}$ |
