## List of Tables

Table S1. Calculated Values of Inter-Ring ( $\mathrm{R}_{\text {inter }}$ ), Intra-Ring ( $\mathrm{R}_{\text {intra }}$ ) Bond Distances (in $\AA$ ), Axial ( $\mathrm{R}_{\mathrm{ax}}$ ) and Equatorial ( $\mathrm{R}_{\mathrm{eq}}$ ) Bond distances (in $\AA$ ) of Central Atom with Ring Atoms, HOMO-LUMO Energy Gap ( $\Delta \mathrm{E}_{\mathrm{gap}}$, in eV ) of $\mathrm{U} @ \mathrm{Bi}_{12}{ }^{3-}$ and $\mathrm{La} @ \mathrm{Sb}_{12}{ }^{3-}$ Clusters as obtained by using PBE (B3LYP) Methods along with DEF and DEF2 basis sets. (B3LYP Calculated Properties are reported within parenthesis).

Table S2. Calculated Relative Energies (RE, in kcal mol ${ }^{-1}$ ) of $\mathrm{M} @ \mathrm{E}_{12}{ }^{6-}\left(\mathrm{M}=\mathrm{Th}^{4+}, \mathrm{Pa}^{5+}\right.$, $\mathrm{U}^{6+}, \mathrm{Np}^{7+}$; and $\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+} ; \mathrm{E}=\mathrm{Sb}$, and Bi) Clusters in $\mathrm{C}_{\mathrm{s}}$ Symmetry with Respect to the Corresponding $\mathrm{D}_{3 \mathrm{~h}}$ Isomer as obtained by using PBE/DEF Method.

Table S3. Calculated Values of Inter-Ring ( $\mathrm{R}_{\text {inter }}$ ), Intra-Ring ( $\mathrm{R}_{\text {intra }}$ ) Bond Distances (in $\AA$ ) as well as Axial $\left(\mathrm{R}_{\mathrm{ax}}\right)$ and Equatorial $\left(\mathrm{R}_{\mathrm{eq}}\right)$ Bond distances (in $\AA$ ) of Central Atom with Ring Atoms in $\mathrm{An} @ \mathrm{E}_{12}{ }^{6-}$ and $\mathrm{Ln} @ \mathrm{E}_{12}{ }^{6-}\left(\mathrm{An}=\mathrm{Th}^{4+}, \mathrm{Pa}^{5+}, \mathrm{U}^{6+}, \mathrm{Np}^{7+} ; \mathrm{Ln}=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+}\right.$; and $\mathrm{E}=\mathrm{Sb}$ and Bi ) Clusters in $\mathrm{D}_{3 \mathrm{~h}}$ Symmetry as obtained by using ${ }^{\mathrm{a}}$ B3LYP/DEF Method.

Table S4. Calculated Values of Binding Energy (BE, in eV), HOMO-LUMO Energy gap ( $\Delta \mathrm{E}_{\text {gap }}$, in eV), and Dihedral Angle (DA, in Degree) of $\mathrm{E}_{4}{ }^{2-}$ of $\mathrm{An} @ \mathrm{E}_{12}{ }^{6-}$ and $\operatorname{Ln} @ \mathrm{E}_{12}{ }^{6-}$ (An $=\mathrm{Th}^{4+}, \mathrm{Pa}^{5+}, \mathrm{U}^{6+}, \mathrm{Np}^{7+} ; \mathrm{Ln}=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+} ;$ and $\mathrm{E}=\mathrm{Sb}$ and Bi) Clusters in $\mathrm{D}_{3 \mathrm{~h}}$ Symmetry as obtained by using B3LYP/DEF Method.

Table S5. Optimized Bond Length (in, $\AA$ ), HOMO-LUMO Gap ( $\Delta \mathrm{E}$, in eV ), Binding Energy (BE, in eV ) and Dihedral Angle of $\mathrm{Sb}_{4}{ }^{2-}$ Ring (DA, in degree) of $\mathrm{Th} @ \mathrm{Sb}_{12}{ }^{2-}$, Calculated using AVDZ (without f Function), AVTZ (with f Function) and of La@ $\mathrm{Sb}_{12}{ }^{3-}$ Calculated using def-TZVP (without f Function), def-TZVPP (with f Function) and for ThO, Bond Length (in, Å), HOMO-LUMO Gap ( $\Delta \mathrm{E}$, in eV ), Binding Energy ( BE , in eV ) Calculated using AVDZ (without f Function), AVTZ (with f Function) Basis Sets. For Sb and O , def-TZVPP basis set is used.

Table S6. Calculated VDD Charge on the in Plane Atoms $\left(q_{\mathrm{eq}}\right)$, Out of Plane Atoms ( $q_{\mathrm{ax}}$ ) Overall VDD charge on Ring ( $q_{\text {ring }}$ ) and f Atomic Population $\left(f_{M}\right)$ of Central atoms of the $\mathrm{An} @ \mathrm{E}_{12}{ }^{6-}$ and $\mathrm{Ln} @ \mathrm{E}_{12}{ }^{6-}\left(\mathrm{An}=\mathrm{Th}^{4+}, \mathrm{Pa}^{5+}, \mathrm{U}^{6+}, \mathrm{Np}^{7+} ; \mathrm{Ln}=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+} ;\right.$ and $\mathrm{E}=$ Sb and Bi ) Clusters using Voronoi Deformation Density (VDD) and Natural Population

Analysis (NPA) as obtained by using PBE/TZ2P and PBE/DEF (B3LYP/ DEF) Methods, respectively.(B3LYP calculated Atomic Population is given in the parenthesis)

Table S7. Calculated Values of Bond Critical Point Electron Density ( $\rho$ in e $\mathrm{a}_{0}{ }^{-3}$ ), Laplacian of Electron Density ( $\nabla^{2} \rho$ in e $\mathrm{a}_{0}{ }^{-5}$ ), Local Electron Energy Density ( $\mathrm{E}_{\mathrm{d}}$ in au), and Ratio of Local Electron Kinetic Energy Density and Electron Density (G(r)/ $\rho$ in au) of An@ $\mathrm{Sb}_{12}{ }^{6-}$ $\left(\mathrm{An}=\mathrm{Th}^{4+}, \mathrm{Pa}^{5+}, \mathrm{U}^{6+}, \mathrm{Np}^{7+}\right)$ Clusters as obtained by using ${ }^{\text {a }} \mathrm{PBE}$ Method along with ${ }^{\mathrm{b}}$ Small Core ECP Employed with EDF.

Table S8. Calculated Values of Bond Critical Point Electron Density ( $\rho$ in e $\mathrm{a}_{0}{ }^{-3}$ ), Laplacian of Electron Density ( $\nabla^{2} \rho$ in e $\mathrm{a}_{0}{ }^{-5}$ ), Local Electron Energy Density ( $\mathrm{E}_{\mathrm{d}}$ in au), and Ratio of Local Electron Kinetic Energy Density and Electron Density (G(r)/ $\rho$ in au) of $\operatorname{Ln} @ \operatorname{Sb}_{12}{ }^{6-}$ (Ln $=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+}$ ) Clusters as obtained by using ${ }^{\text {a }}$ PBE Method along with ${ }^{\mathrm{b}}$ Small Core ECP Employed with EDF.

Table S9. Calculated Values of Bond Critical Point Electron Density ( $\rho$ in e $\mathrm{a}_{0}{ }^{-3}$ ), Laplacian of Electron Density ( $\nabla^{2} \rho$ in e $a_{0}{ }^{-5}$ ), Local Electron Energy Density ( $\mathrm{E}_{\mathrm{d}}$ in au), and Ratio of Local Electron Kinetic Energy Density and Electron Density (G(r)/ $\rho$ in au) of $\mathrm{An} @ \mathrm{Bi}_{12}{ }^{6-}$ $\left(\mathrm{An}=\mathrm{Th}^{4+}, \mathrm{Pa}^{5+}, \mathrm{U}^{6+}, \mathrm{Np}^{7+}\right)$ Clusters as obtained by using ${ }^{\text {a }} \mathrm{PBE}$ Method along with ${ }^{\mathrm{b}}$ Small Core ECP Employed with EDF.

Table S10. Calculated Values of Bond Critical Point Electron Density ( $\rho$ in e $\mathrm{a}_{0}{ }^{-3}$ ), Laplacian of Electron Density ( $\nabla^{2} \rho$ in e $\mathrm{a}_{0}{ }^{-5}$ ), Local Electron Energy Density ( $\mathrm{E}_{\mathrm{d}}$ in au), and Ratio of
 $\left.=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+}\right)$ Clusters as obtained by using ${ }^{\text {a }}$ PBE Method along with ${ }^{\mathrm{b}}$ Small Core ECP Employed with EDF.

Table S11. Calculated Vibrational Frequencies (in $\mathrm{cm}^{-1}$ ) as Obtained by using PBE/DEF Method for $\mathrm{Ln} @ \mathrm{Sb}_{12}{ }^{6-}$ and $\mathrm{Ln} @ \mathrm{Bi}_{12}{ }^{6-}$ Clusters. (Absorption Intensities in $\mathrm{km} \mathrm{mol}^{-1}$ and Symmetry are Provided in Parenthesis.)

Table S12.Calculated Vibrational Frequencies (in $\mathrm{cm}^{-1}$ ) as Obtained by using PBE/DEF Method for $\mathrm{An} @ \mathrm{Sb}_{12}{ }^{6-}$ and $\mathrm{An} @ \mathrm{Bi}_{12}{ }^{6-}$ Clusters. (Intensities in $\mathrm{km} \mathrm{mol}^{-1}$ and Symmetry are Provided in Parenthesis.)

## List of Figures

Figure S1. Molecular orbital energy level diagram of $\operatorname{Ln} @ \mathrm{Sb}_{12}{ }^{6-}\left(\mathrm{Ln}=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \operatorname{Pr}^{5+}\right.$, $\mathrm{Nd}^{6+}$ ) clusters in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where blue lines represents mixed MOs having orbital contribution from central metal ion and ring atoms, red lines stands for the MOs corresponding to the pure orbital of ring atoms only and green lines stands for small mixed MOs having small contribution of central ion orbitals Here, the s block refers to the valence s-orbitals of Sb atoms)

Figure S2. Molecular orbital pictures of $\mathrm{Th} @ \mathrm{Sb}_{12}{ }^{2-}$ cluster in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where M stands for mixed MOs having orbital contribution from central metal atom and ring atoms, P stands for MOs corresponds to pure orbital of ring atoms alone)

Figure S3. Molecular orbital pictures of $\mathrm{La} @ \mathrm{Sb}_{12}{ }^{3-}$ cluster in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where M stands for mixed MOs having orbital contribution from central metal ion and ring atoms, P stands for MOs corresponds to pure orbital of ring atoms only and S-M stands for those MOs which are formed by the overlapping of atomic orbital of ring atoms and have very small overlapping with the atomic orbital of central atom)

Figure S4. Molecular orbital pictures of $\mathrm{U} @ \mathrm{Sb}_{12}$ cluster in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where M stands for mixed MOs having orbital contribution from central metal atom and ring atoms, P stands for MOs corresponds to pure orbital of ring atoms alone.)

Figure S5. Molecular orbital pictures of $\mathrm{Nd} @ \mathrm{Sb}_{12}$ cluster in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where M stands for mixed MOs having orbital contribution from central metal ion and ring atoms, P stands for MOs corresponds to pure orbital of ring atoms
only and $\mathrm{S}-\mathrm{M}$ stands for those MOs which are formed by the overlapping of atomic orbital of ring atoms and have very small overlapping with the atomic orbital of central atom)

Figure S6. Density of states plots of $\operatorname{Ln} @ \mathrm{Sb}_{12}{ }^{6-}\left(\mathrm{Ln}=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+}\right)$ clusters in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Arrows are showing peak corresponding to HOMO).

Figure S7. Density of states plots of (a) $\mathrm{Ln} @ \mathrm{Bi}_{12}{ }^{6-}\left(\mathrm{Ln}=\mathrm{La}^{3+}, \mathrm{Ce}^{4+}, \mathrm{Pr}^{5+}, \mathrm{Nd}^{6+}\right)$ clusters and (b) $\mathrm{An} @ \mathrm{Bi}_{12}{ }^{6-}\left(\mathrm{An}=\mathrm{Th}^{4+}, \mathrm{Pa}^{5+}, \mathrm{U}^{6+}, \mathrm{Np}^{7+}\right)$ clusters in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using $\mathrm{PBE} / \mathrm{DEF}$ method. (Arrows are showing peak corresponding to HOMO).

Figure S8. Laplacian of electron density plots (a1 \& a2) and Electron density plots (b1 \& b2) of $\mathrm{Ln} @ \mathrm{Sb}_{12}{ }^{6-}$ and $\mathrm{An} @ \mathrm{Sb}_{12}{ }^{6-}$ clusters, respectively, in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method employed with EDF. (Blue dots are Bond critical point (BCP) and orange dots are ring critical point (RCP))

Figure S9. Laplacian of electron density plots (a1 \& a2) and Electron density plots (b1 \& b2) of $\mathrm{Ln} @ \mathrm{Bi}_{12}{ }^{6-}$ and $\mathrm{An} @ \mathrm{Bi}_{12}{ }^{6-}$ clusters, respectively, in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method employed with EDF. (Blue dots are bond BCP and orange dots are ring critical point (RCP))

Figure S10. Harmonic frequency plots of (a) $\mathrm{Ln} @ \mathrm{Sb}_{12}{ }^{6-}$ and (b) $\mathrm{An} @ \mathrm{Sb}_{12}{ }^{6-}$ clusters, respectively, in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method.

Figure S11. Harmonic frequency plots of (a) $\operatorname{Ln} @ \mathrm{Bi}_{12}{ }^{6-}$ and (b) $\mathrm{An} @ \mathrm{Bi}_{12}{ }^{6-}$ clusters, respectively, in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method.

Figure S12. Scalar relativistic (left panel) and spin orbit splitting (right panel) diagram of the valence molecular orbital energy levels of $\mathrm{Nd} @ \mathrm{Bi}_{12}$ system.

Figure S13. Scalar relativistic (left panel) and spin orbit splitting (right panel) diagram of the valence molecular orbital energy levels of $\mathrm{Nd} @ \mathrm{Sb}_{12}$ system.

Figure S14. Scalar relativistic (left panel) and spin orbit splitting (right panel) diagram of the valence molecular orbital energy levels of $\mathrm{U} @ \mathrm{Sb}_{12}$ system.

Table S1. Calculated Values of Inter-Ring ( $\mathbf{R}_{\text {inter }}$ ), Intra-Ring ( $\mathbf{R}_{\text {intra }}$ ) Bond Distances (in $\AA$ ), Axial ( $\mathbf{R}_{\mathrm{ax}}$ ) and Equatorial ( $\mathrm{R}_{\mathrm{eq}}$ ) Bond distances (in $\AA$ ) of Central Atom with Ring Atoms, HOMO-LUMO Energy Gap ( $\Delta \mathrm{E}_{\mathrm{gap}}$, in eV ) of U@ $@ \mathrm{Bi}_{12}{ }^{3-}$ and $\mathrm{La} @ \mathrm{Sb}_{12}{ }^{3-}$ Clusters as obtained by using PBE (B3LYP) Methods along with DEF and DEF2 basis sets. (B3LYP Calculated Properties are reported within parenthesis)

| Systems | Method | $\mathbf{R}_{\text {eq }}$ | $\mathbf{R}_{\text {ax }}$ | $\mathbf{R}_{\text {intra }}$ | $\mathbf{R}_{\text {inter }}$ | $\Delta \mathbf{E}_{\text {gap }}$ |

Figure S1. Molecular orbital energy level diagram of $\mathbf{L n} @ \mathbf{S b}_{12}{ }^{6-}\left(\mathbf{L n}=\mathbf{L a}^{\mathbf{3 +}}, \mathbf{C e}^{\mathbf{4 +}}, \mathbf{P r}^{5+}\right.$, $\mathbf{N d}^{6+}$ ) clusters in $\mathrm{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where blue lines represents mixed MOs having orbital contribution from central metal ion and ring atoms, red lines stands for the MOs corresponding to the pure orbital of ring atoms only and green lines stands for small mixed MOs having small contribution of central ion orbitals. Here, the $s$ block refers to the valence s-orbitals of $\mathbf{S b}$ atoms)

As, it can be seen from the above MOs pictures, that no forbitals of Th are involved in the bonding with ring atoms. Therefore, in the present system, intra ring bonds are not elongated. Therefore, in $\mathrm{Th} @ \mathrm{Sb}_{12}{ }^{2-}$ system, all $\mathrm{R}_{\text {intra }}$ bonds are shorter than the $\mathrm{R}_{\text {inter }}$ bonds.

Figure S2. Molecular orbital pictures of $\mathbf{T h} @$ Sb $_{12}{ }^{\mathbf{2 -}}$ cluster in $\mathbf{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where M stands for mixed MOs having orbital contribution from central metal atom and ring atoms, $P$ stands for MOs corresponds to pure orbital of ring atoms alone)

As, it can be seen from the above MOs pictures, that no forbitals of La are involved in the bonding with ring atoms. Therefore, in the present system, intra ring bonds are not elongated. Therefore, in $\mathrm{La} @ \mathrm{Sb}_{12}{ }^{3-}$ system, all $\mathrm{R}_{\text {intra }}$ bonds are shorter than the $\mathrm{R}_{\text {inter }}$ bonds.

Figure S3. Molecular orbital pictures of $\mathbf{L a @} @$ Sb $_{12}{ }^{3-}$ cluster in $\mathbf{D}_{3 h}$ symmetry as obtained by using PBE/DEF method. (Where $M$ stands for mixed MOs having orbital contribution from central metal ion and ring atoms, $P$ stands for MOs corresponds to pure orbital of ring atoms only)

As, it can be seen from the above MOs pictures, that the $f$ orbitals of $U$ are involved in the bonding with ring atoms in $10 \mathrm{e}^{\prime}$ and $2 \mathrm{a}_{2}{ }^{\prime}$ MOs. Therefore, in the present system, intra ring bonds are elongated and became longer than the $\mathrm{R}_{\text {inter }}$ bonds.

Figure S4. Molecular orbital pictures of $\mathbf{U} @ \mathbf{S b}_{12}$ cluster in $\mathbf{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where M stands for mixed MOs having orbital contribution from central metal atom and ring atoms, $P$ stands for MOs corresponds to pure orbital of ring atoms alone)

As, it can be seen from the above MOs pictures, that the forbitals of Nd are involved in the bonding with ring atoms in $10 \mathrm{e}^{\prime}$ and $2 \mathrm{a}_{2}{ }^{\prime}$ MOs. Therefore, in the present system, intra ring bonds are elongated and became longer than the $\mathrm{R}_{\text {inter }}$ bonds.

Figure S5. Molecular orbital pictures of $\mathbf{N d} @$ Sb $_{12}$ cluster in $\mathbf{D}_{3 \mathrm{~h}}$ symmetry as obtained by using PBE/DEF method. (Where $M$ stands for mixed MOs having orbital contribution from central metal ion and ring atoms, $P$ stands for MOs corresponds to pure orbital of ring atoms only and $S-M$ stands for those MOs which are formed by the overlapping of atomic orbital of ring atoms and have very small overlapping with the atomic orbital of central atom)

Figure S6. Density of states plots of $\mathbf{L n} @ \mathbf{S b}_{12}{ }^{6-}\left(\mathbf{L n}=\mathbf{L a}^{3+}, \mathbf{C e}^{4+}, \mathbf{P r}^{\mathbf{5 +}}, \mathbf{N d}^{6+}\right)$ clusters in $D_{3 h}$ symmetry as obtained by using PBE/DEF method. (Arrows are showing peak corresponding to HOMO).
