

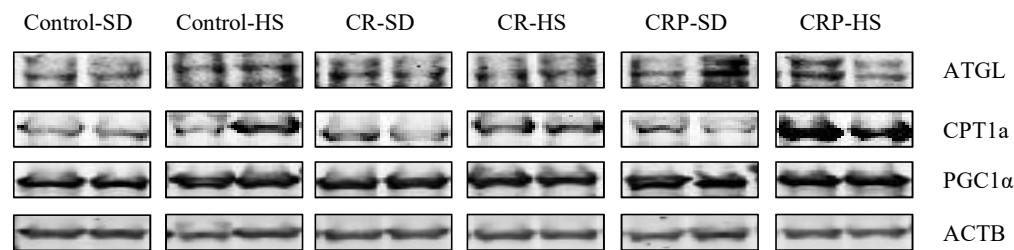

Figure S3

Representative bands of western blots performed to analyze ATGL, CPT1a and PGC1α levels in liver samples, related to Figure 3D. Two bands are shown for each experimental condition. SD: standard diet, HS: high sucrose diet, CR: offspring of calorie restricted dams, P (in CRP) indicates high-esterified pectin supplementation of the offspring. The corresponding bands of the reference protein (ACTB, β-Actin) are also shown.
