Table S2. Fugacity sampling ancillary data

Table S3. Air, snow, seawater and plankton recoveries

Table S4. Ambient air PCB and OCP concentrations ( $\text{pg m}^{-3}$ )

Table S5. Air equilibrated in-situ with soil/snow PCBs and OCPs concentrations ( $\text{pg m}^{-3}$ )

Table S6. PCBs and OCPs  $\ln f_s/f_a$  ratios

Table S7. PCBs and OCPs surface snow concentrations ( $\text{pg L}^{-1}$ )

Table S8. PCBs and OCPs correlations with snow density

Table S9. PCBs and HCB net air-snow diffusive fluxes ( $\text{ng m}^{-2} \text{d}^{-1}$ )

Table S10. PCBs and OCPs surface seawater concentrations ( $\text{pg L}^{-1}$ )

Table S11. Plankton PCBs and OCPs concentrations ( $\text{ng g}_{\text{dw}}^{-1}$ )

Table S12. Gross diffusive absorption fluxes of PCBs and HCB to coastal seawater ( $\text{pg m}^{-2} \text{d}^{-1}$ )

Table S13. Gross diffusive volatilization fluxes of PCBs and HCB from coastal seawater ( $\text{pg m}^{-2} \text{ d}^{-1}$ )

Table S14. PCBs and HCB net air-seawater diffusive fluxes ( $\text{pg m}^{-2} \text{ d}^{-1}$ ). Negative values mean net absorption fluxes.

Table S15. Summary of literature works reporting POPs in snow and air.

Figure S1: Congener profiles of PCBs in air, snow, seawater and plankton from coastal Livingston island.

Figure S2. PCB-149 and PCB-187 ambient air and air equilibrated in-situ with soil/snow correlations with temperature.

Figure S3. Soil-air fugacity ratios ( $\ln f_s/f_a$ ) versus the octanol-air partition coefficient ( $K_{OA}$ ), and snow-air fugacity ratios versus  $K_{OA}$ .

Figure S4. PCBs  $\ln f_s/f_a$  ratios versus Log  $K_{OA}$  bare soil and soil with vegetation.

Figure S5. HCB  $\ln f_s/f_a$  ratios versus Log  $K_{OA}$ .

Figure S6. Diffusive snow-air fluxes of polychlorinated biphenyls (PCBs).

Figure S7. Snow amplification of fugacity ratios between seawater and air ( $f_w/f_a$ ).

Figure S8. Comparison of snow-air partition coefficients ( $K_{SA}$ ) reported for POPs.

### **Text S1. Air-snow diffusive exchange flux.**

The exchange velocity ( $\text{m d}^{-1}$ ) was calculated following Hansen et al. (2006 and 2008)<sup>1,2</sup>

$$v^{-1} = (\nu_{air})^{-1} + (\nu_{snow})^{-1}$$

The air side exchange velocity is calculated by:

$$\nu_{air} = k^2 U \left( \ln \left( \frac{Z_w}{Z_0} \right) \ln \left( \frac{Z_{ref}}{Z_0} \right) \right)^{-1}$$

where  $k$  is von Karman's constant (0.4),  $U$  is the wind speed,  $Z_w$  is the height of the wind (10 m),  $Z_{ref}$  is the reference height (2 m), and  $Z_0$  is the surface roughness for snow (0.001 m).  $\nu_{snow}$  is given by the snow diffusion coefficient,  $D_{snow}$ , divided by the thickness of the layer of the snowpack exchanging chemicals with the atmosphere, here assumed to be the top 20 cm of the snowpack.  $D_{snow}$  is calculated as follows:

$$D_{snow} = D_{air} \left( 1 - \frac{\rho_{snow}}{\rho_{ice}} \right)^{1.5}$$

where  $D_{air}$  is the diffusion coefficient of the organic molecule in air, calculated according to Schwarzenbach et al. (2005),<sup>3</sup>  $\rho_{snow}$  is the sample snow density and  $\rho_{ice}$  is the ice density (0.917 g cm<sup>-3</sup>).

### **Text S2: Meta-analysis of snow-air partition coefficients ( $K_{SA}$ ) and prediction of snow amplification of fugacities.**

As equation [1] refers to melted snow - air fugacity gradients, it considers the chemicals in the dissolved phase only. Snow scavenges gas and aerosol phase POPs, but taking into account that aerosol concentrations are very small at Antarctica and most POPs are found mainly in the gas phase, we considered only the wash-out of gas phase compounds by snow, when possible (Table S13).

The snow-air partition coefficient ( $K_{SA}$ ) is given by the concentration in snow over the concentration in the gas phase ( $C_s/C_{SA}$ ). We reviewed the previous reports of simultaneous measurements of concentrations of POPs in snow and air, and a total of 7 publications were found.<sup>4-10</sup> There is a significantly larger number of publications reporting POPs in snow, but they lack of concurrently measured atmospheric concentrations. Table S15 summarizes the data set contained in the 7 publications used in this work. This data was used to derive Figures S8 and Figure 6. We focused on  $K_{SA}$  as reported directly from chemical measurements, we did not consider estimates of the

wash-out ratios of gas phase POPs by models even if these were partly based on measurements. For the estimation of  $K_{SA}H'$ , we used the temperature corrected  $H'$  values (at 274K) as reported elsewhere.<sup>11-14</sup>

Table S1. Average surface (at 0.2 to 5 m depth) CTD data from the Raquelia and Johnson sampling sites. PAR means photosynthetic active radiation.

Table S15. Summary of literature works reporting POPs in snow and air. The estimated  $K_{SA}$  and  $K_{SAH'}$  are reported in Figures S6 and 7, respectively. When the original work only reported the mean but not the individual concentrations, it is indicated after the number of sampling points.

Publication	POP family	#Snow samples	Snow phase	Snow sampling points	#Air samples	Air phase	Air sampling points	Location
Franz et al. 1998	PCB PAHs	3 (only snow precipitation events)	Dissolved +particulate phase	1	3 (only snow precipitations events)	gas+aerosol phase	1	Minnesota Minneapolis/St. Paul, United States
Zhang et al. 2015	PAHs	24 (only snow precipitation events from 20 December to 1 April)	Dissolved +particulate phase	3	24 (only snow precipitation events from 20 December to 1 April)	gas+aerosol phase	3	Athabasca oil sands region in northern Alberta, Canada
Xie et al. 2015	Neutral PFASs	9	Dissolved +particulate phase	6	45 (mean)	gas + aerosol phase	1	Ny-A°lesund, Arctic
Wang et al. 2015	Neutral PFASs	12 (mean)	Dissolved	several (antarctic peninsula)	4 (antarctic samples)	Gas phase	4	Antarctic Peninsula
Li et al. 2017	OPEs	6	Dissolved	6	9	Gas phase	9	Northeast Atlantic and the Arctic Ocean
Casal et al. 2018	PAHs	10	Dissolved	10	51	Gas phase	4	Livingston Island, Antarctic Peninsula
This study	PCBs	10	Dissolved	10	51	Gas phase	4	Livingston Island, Antarctic Peninsula

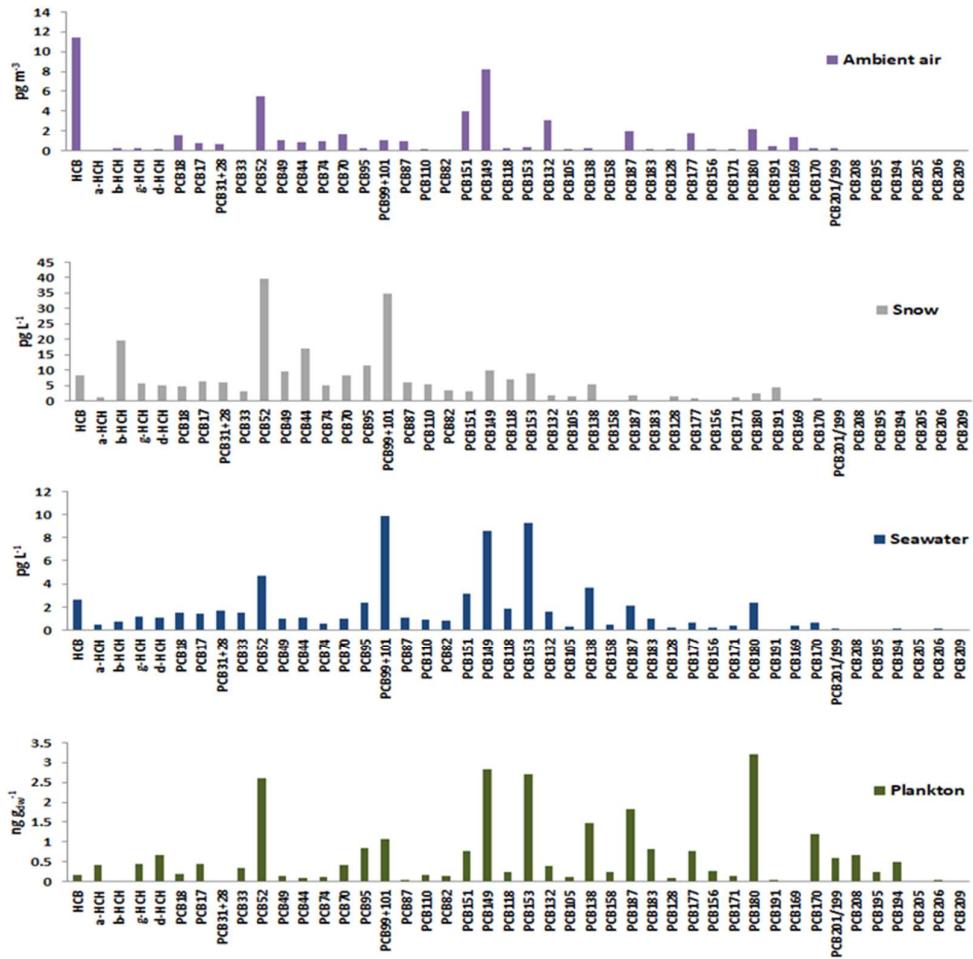

Figure S1: Congener profiles of PCBs in air, snow, seawater and plankton from coastal Livingston island.

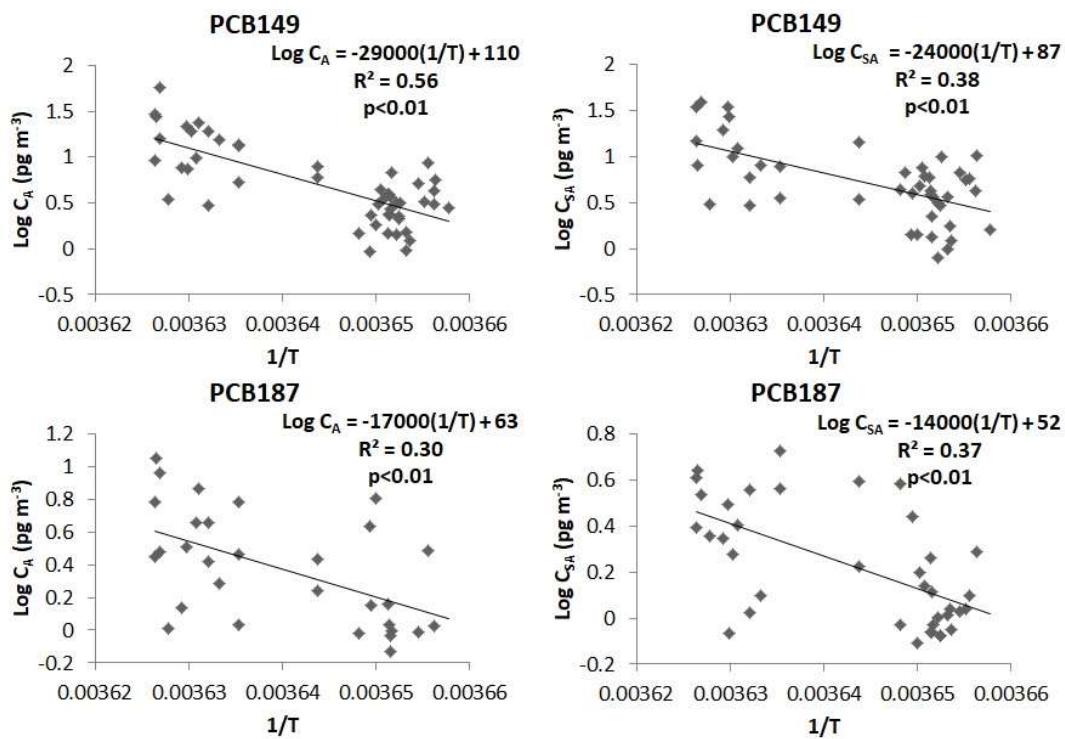

Figure S2. PCB-149 and PCB-187 concentrations in ambient air ( $C_A$ ) and air equilibrated in-situ with soil/snow ( $C_{SA}$ ) correlations with inverse of temperature.

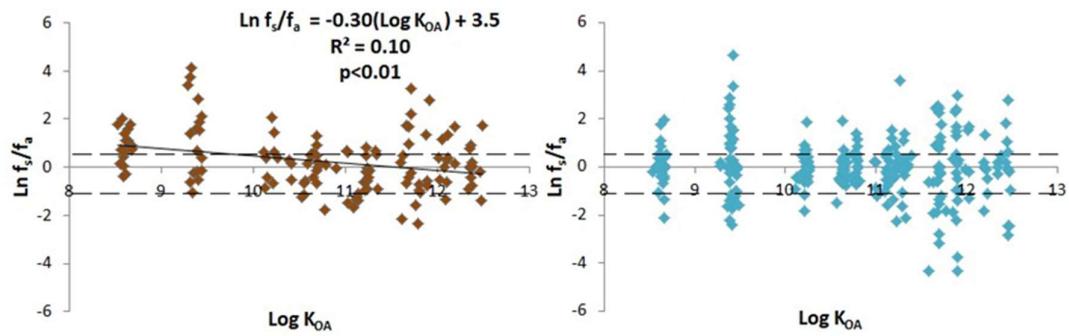

Figure S3. Soil-air fugacity ratios ( $\text{Ln } f_s/f_a$ ) versus the octanol-air partition coefficient ( $K_{\text{OA}}$ ) (left panel), and snow-air fugacity ratios versus  $K_{\text{OA}}$  (right panel).

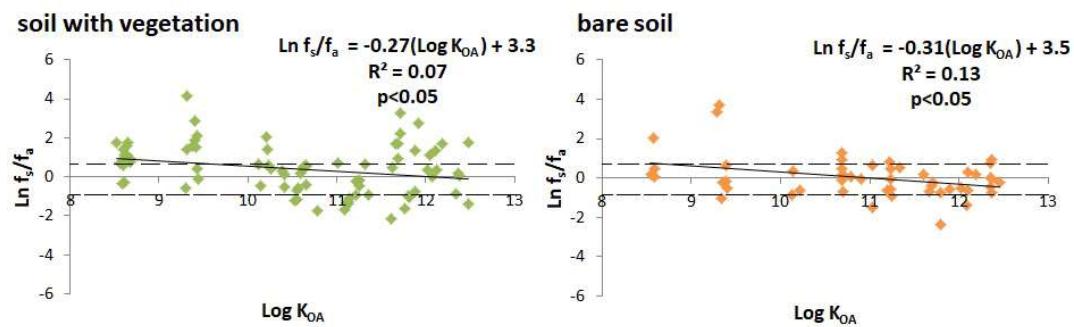

Figure S4. PCBs soil to air fugacity ratios ( $\text{Ln } f_s/f_a$ ) versus the octanol-air partition coefficient ( $\text{Log } K_{\text{OA}}$ ) for bare soil and soil with vegetation (Figure S3 shows the two data sets in one single graph).

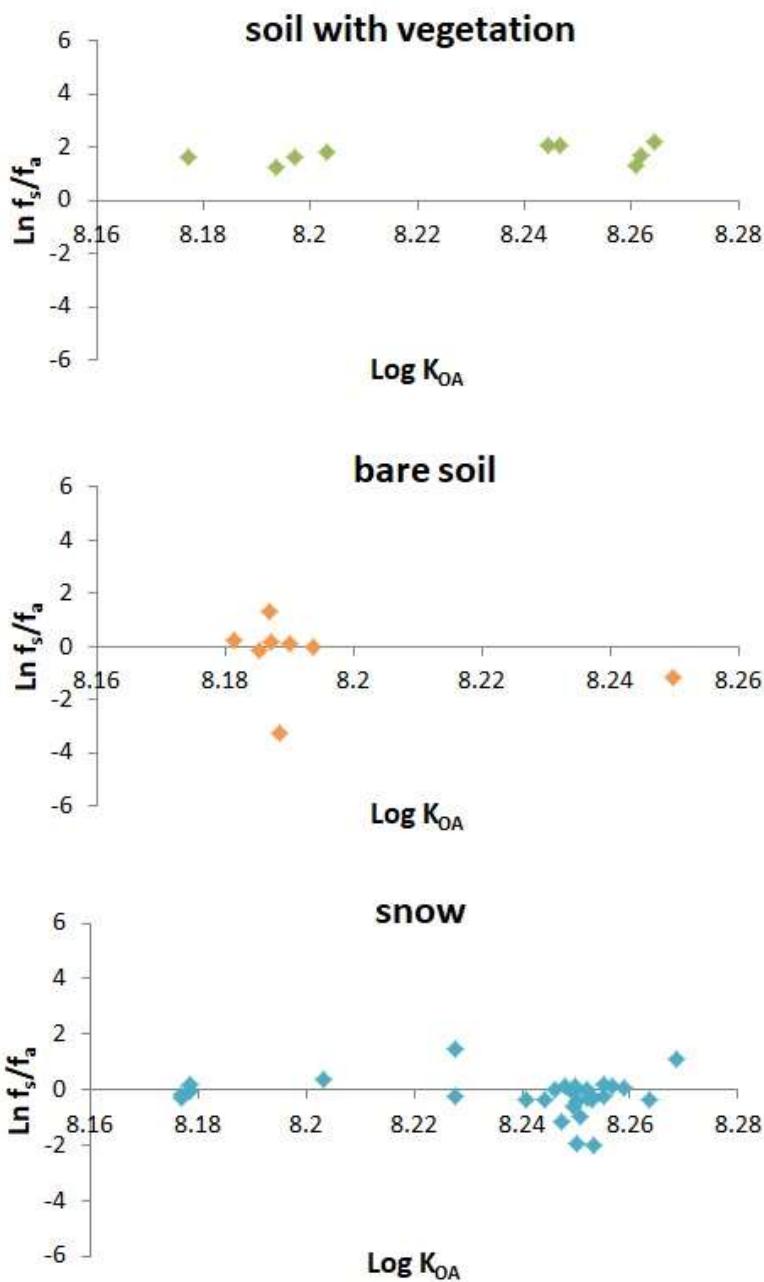

Figure S5. HCB soil/snow to air fugacity ratios ( $\ln f_s/f_a$ ) versus the octanol-air partition coefficient ( $\log K_{OA}$ ).

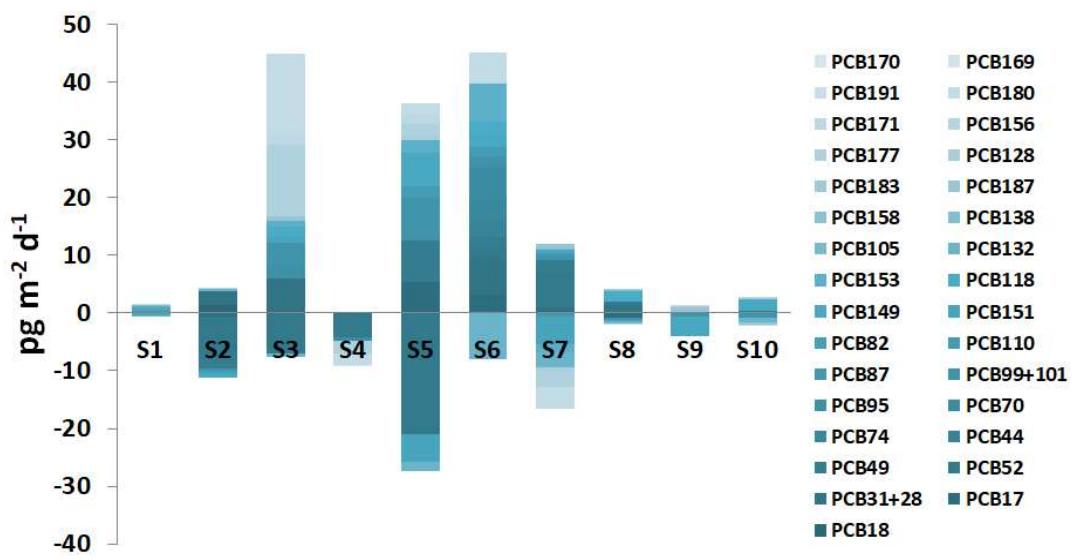

Figure S6. Diffusive snow-air fluxes of polychlorinated biphenyls (PCBs) ( $\text{pg m}^{-2} \text{d}^{-1}$ ).

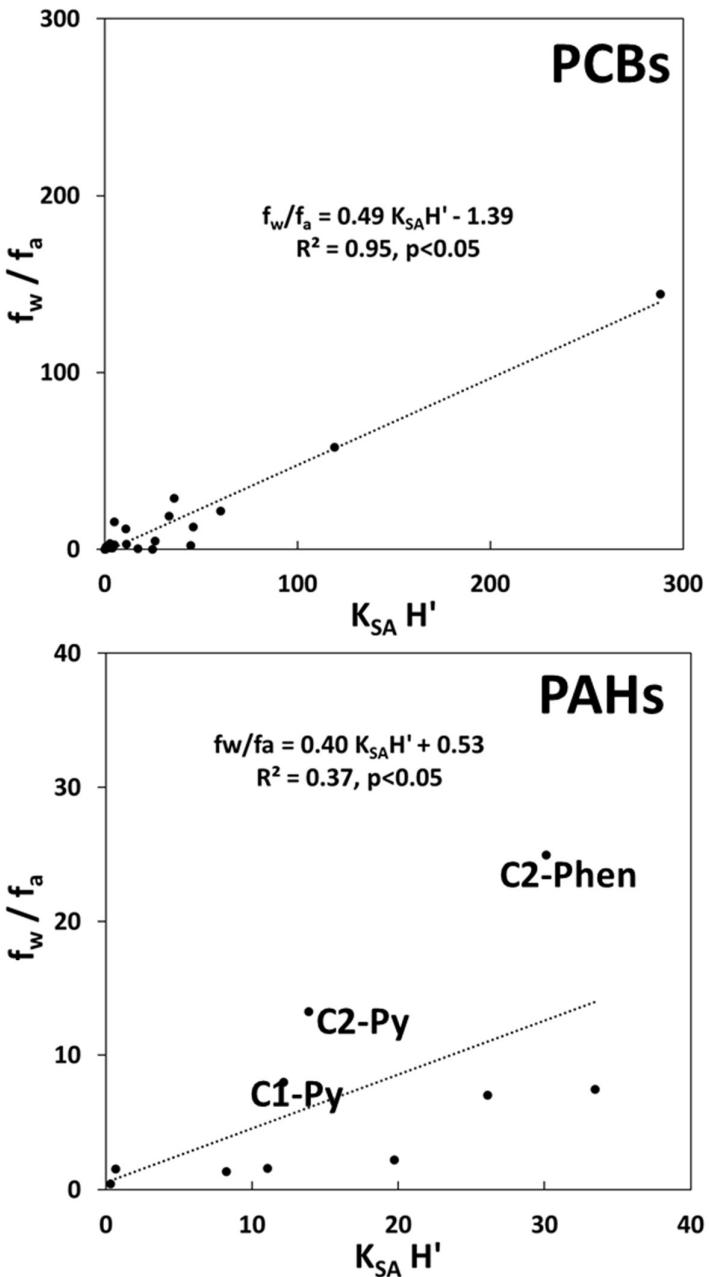

Figure S7: Snow amplification of fugacity ratios between seawater and air ( $f_w/f_a$ ) for PCBs (upper panel) and for PAHs (lower panel). For PCBs, there were two congeners with a large influence on the regression coefficient, but not on the slope, so these were not removed. There was a PAH with a large influence on regression coefficient and slope, so it was removed from the analysis.

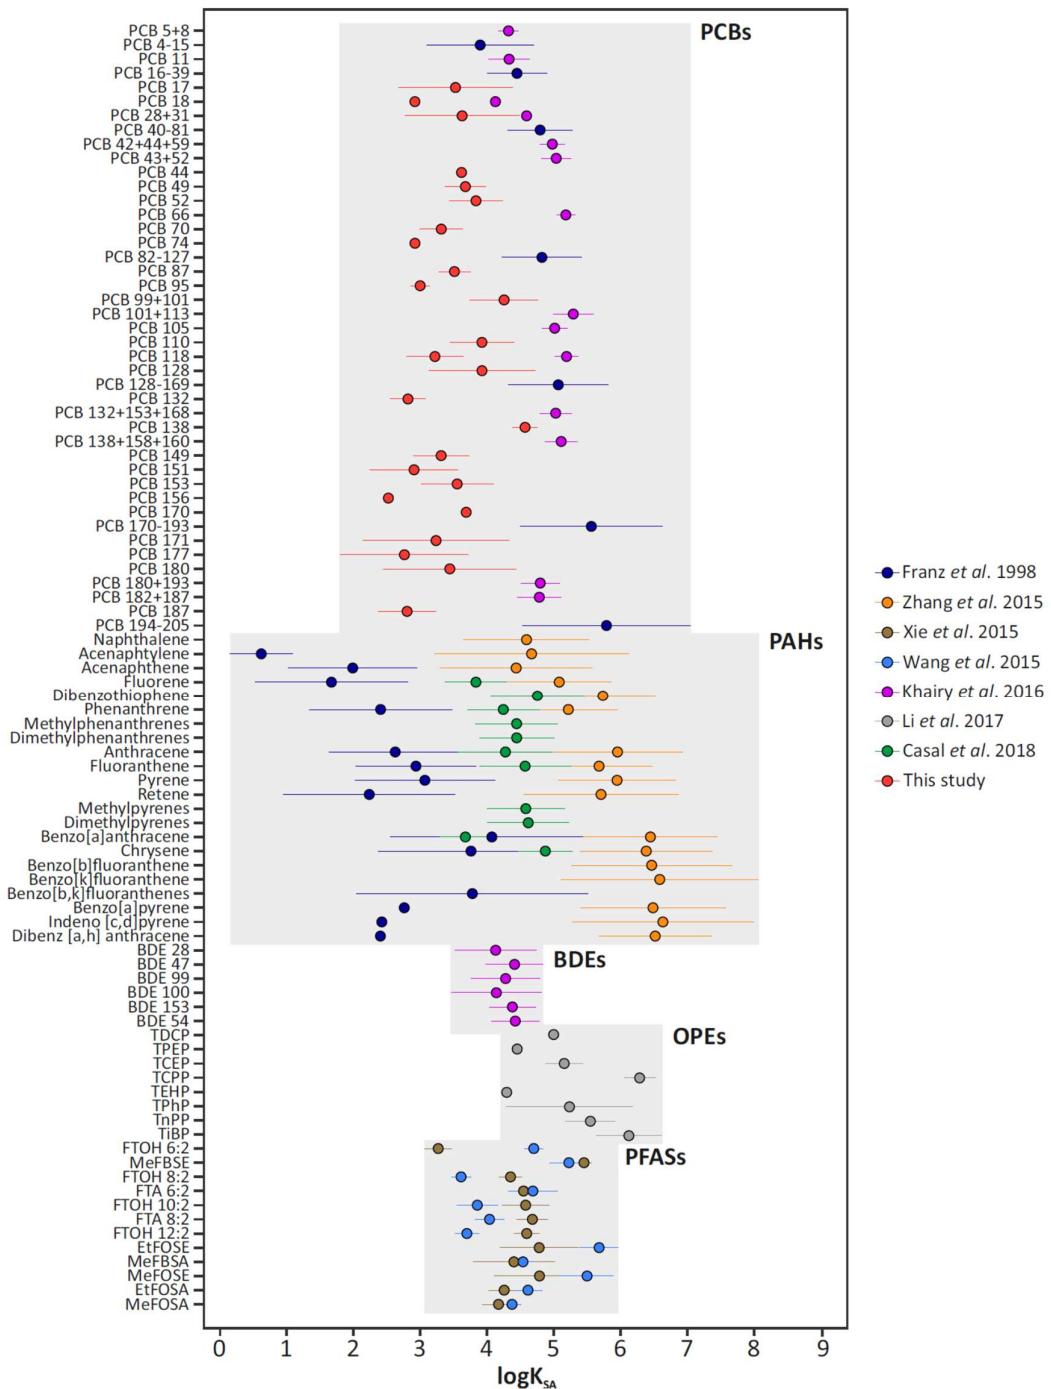

Figure S8. Comparison of snow-air partition coefficients ( $K_{SA}$ ) reported in the literature for POPs (See Table S15 for details), and those generated in this study. The results shown are the mean and standard deviation of  $\log K_{SA}$ .
