## Supporting Information

Table 1. List of parameters obtained by fitting experimental PPP spectra at 0 fs and 300 fs IRvisible delay (shown in Figure 1 of the main text) to Eq. (2) of the main text.

| IR-Vis <br> Delay (fs) | $A_{\mathrm{NR}}$ <br> $(\mathrm{a.u})$. | $\omega_{\mathrm{g}}$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\sigma_{\mathrm{g}}$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\phi_{\mathrm{NR}}$ <br> $(\mathrm{rad})$ | $B\left(\mathrm{r}^{+}\right)$ <br> $(\mathrm{a} . \mathrm{u})$. | $B\left(\mathrm{r}^{-}\right)$ <br> $(\mathrm{a} . \mathrm{u})$. | $\Gamma\left(\mathrm{r}^{+}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\Gamma\left(\mathrm{r}^{-}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\omega\left(\mathrm{r}^{+}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\omega\left(\mathrm{r}^{-1}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0.07 | 2902 | 296 | -1.5 | -1.0 | -0.63 | 20.0 | 16.5 | 2915 | 2975 |
| 300 | 0.04 | 2940 | 300 | 0.39 | 0.38 | -0.28 | 14.3 | 14.0 | 2907 | 2979 |

Table 2. List of parameters obtained by fitting simulated PPP spectra at 0 fs and 300 fs IRvisible delay (shown in Figure 3 of the main text) to Eq. (2) of the main text.

| IR-Vis <br> Delay (fs) | $A_{\mathrm{NR}}$ <br> $(\mathrm{a} . \mathrm{u})$. | $\omega_{\mathrm{g}}$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\sigma_{\mathrm{g}}$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\phi_{\mathrm{NR}}$ <br> $(\mathrm{rad})$ | $B\left(\mathrm{r}^{+}\right)$ <br> $(\mathrm{a} . \mathrm{u})$. | $B\left(\mathrm{r}^{-}\right)$ <br> $(\mathrm{a} . \mathrm{u})$. | $\Gamma\left(\mathrm{r}^{+}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\left.\Gamma \mathrm{r}^{-}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\omega\left(\mathrm{r}^{+}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\omega\left(\mathrm{r}^{-}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0.09 | 2904 | 206 | -1.7 | -1.0 | -0.63 | 18.6 | 16.3 | 2917 | 2974 |
| 300 | 0.05 | 2917 | 237 | -2.6 | 0.39 | -0.50 | 16.7 | 13.6 | 2922 | 2979 |

Table 3. Wavelength $\lambda$ and pulse duration $\tau$ parameters used in Eqs. (9) and (10) to simulate the electric fields of the visible and IR pulses.

|  | $\lambda(\mathrm{nm})$ | $\tau(\mathrm{fs})$ |
| :---: | :---: | :---: |
| IR | 3440 | 80 |
| Visible | 796 | 50 |

Table 4. The amplitudes $B$, line widths $\Gamma$ and central frequencies $\omega$ of the resonant response for the symmetric $\left(\mathrm{r}^{+}\right)$and asymmetric ( $\left.\mathrm{r}^{-}\right) \mathrm{CH}_{3}$-stretch vibrational modes, as well as the amplitude and phase of the nonresonant background used in the simulations (Eq. (8) of the main text).

| IR-Vis <br> Delay (fs) | $A_{\mathrm{NR}}$ <br> (a.u. $)$ | $\phi_{\mathrm{NR}}$ <br> $(\mathrm{deg})$ | $B\left(\mathrm{r}^{+}\right)$ <br> $($a.u. $)$ | $B\left(\mathrm{r}^{-}\right)$ <br> $($a.u. $)$ | $\Gamma\left(\mathrm{r}^{+}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\Gamma\left(\mathrm{r}^{-}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\omega\left(\mathrm{r}^{+}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ | $\omega\left(\mathrm{r}^{-}\right)$ <br> $\left(\mathrm{cm}^{-1}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 130 | 245 | -0.1 | -0.07 | 12 | 10 | 2915 | 2964 |
| 300 | $1.5 \times 10^{8}$ | 190 | 0.1 | 0.07 | 12 | 8 | 2915 | 2975 |

Note: the nonresonant background amplitude $A_{\mathrm{NR}}$ for the 300 fs delayed case is large because it represents interaction with the (very weak) leading edge of the visible pulse (see Figure 2 of the main text). The amplitude of the visible pulse at -300 fs could not be quantified as it was below our detection limit, and thus the spectra for the 300 fs delay are fit using $A_{\mathrm{NR}}$ as an independent adjustable parameter.
