

Figure S1, Burkhardt et al.

Figure S1. Mitochondrial ATPase activity staining of wild-type and *mas1* mitochondria. Mitochondria isolated from wild-type (WT) and *mas1* cells after growth at 24°C or 6 or 12 hours shift to 37°C were lysed in digitonin buffer and separated on BN-PAGE. The activity of the mitochondrial ATPase was visualized by in-gel calcium phosphate precipitation upon ATP hydrolysis. V_2 , F_1F_0 -ATP synthase dimer; V , F_1F_0 -ATP synthase monomer; F_1 , F_1 part of the ATP synthase.
