17 Supplemental Figure 3. Reproducibility of characteristic peaks of gelatin from three
18 replicates of film samples. A. the unique peptide $^{592}\text{GP}^*\text{PGESGAAGPTGPIGSR}^{609}$
19 with m/z of 790.8971^{2+} from bovine gelatin; B. the unique peptide
20 $^{51}\text{GEPG}^*\text{PTGVQGP}^*\text{PGPA GEEGK}^{470}$ with m/z of 925.4421^{2+} from porcine gelatin.
21 The film samples were prepare by mixing 1:1 weight ratio of bovine and porcine

22 gelatin with glycerol and sorbitol. Glycerol and sorbitol were added at the
23 concentration of 15% (w/w) of total gelatin, respectively. The characteristic peaks
24 for bovine and porcine gelatins were detected by nanoACQUITY UPLC system and
25 LTQ-Orbitrap Velos mass spectrometer. Relative standard deviation (RSD) was
26 calculated based on the monoisotopic peak area.
