

Supplemental Figure S5

Supplemental Figure S5 - Biosynthetic relationship between the five bisecting GlcNAc containing *N*-glycans in MDA157. Five core-fucosylated bisecting GlcNAc containing *N*-glycans were detected in MDA157, The isomeric glycans 35a and 35b differed by their sialic acid linkages; the $\alpha 2,3$ -linked sialylated structure was expressed at twice the level of the $\alpha 2,6$ -linked isomer.
