**SI-2.** Photographs of typical beads. (a) Images of CB7% and (b) OCB7%, respectively.

**SI-3 Table 1.** Characteristics of cellulose beads (CB) and oxidized cellulose beads (OCB).  $m_{\text{wet}}$ ,  $V_{\text{wet}}$  and  $\rho_{\text{wet}}$  stand for mean mass of wet beads, mean volume of wet beads estimated from  $\emptyset_{\text{wet}}$  and mean density of wet beads, respectively. The total negative charges per gram of bead were determined by conductivity titration method.
