## 2. Synthesis of acene-containing conjugated polymers

## Synthesis of PDPPPy (1)

To a degassed 7 mL toluene solution of 2,7-bis(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)-pyrene (73 mg, 0.16 mmol ), 2,5-di(2-dodecylhexadecyl)-3,6-bis-(5-bromothiophenyl)-1,4-diketopyrrolo[3,4-c]pyrrole ( $200 \mathrm{mg}, 0.16 \mathrm{mmol}$ ), $\mathrm{K}_{2} \mathrm{CO}_{3}$ ( $1.68 \mathrm{mg}, 0.008 \mathrm{mmol}$ ), and three drops of Aliquat 336 were added with 0.7 mL of degassed demineralized water. $\mathrm{Pd}_{2}(\mathrm{dba})_{3}(3 \mathrm{mg}, 2 \mathrm{~mol} \%)$ and $\mathrm{P}(o-\mathrm{tolyl})_{3}(4 \mathrm{mg}, 8 \mathrm{~mol} \%)$ were then added to the reaction mixture. The reaction solution was allowed to stir for 3 h at $90^{\circ} \mathrm{C}$ under argon atmosphere. The slightly viscous dark blue solution was cooled down to room temperature. It was poured into a 200 mL methanol/ $\mathrm{HCl}(1 \mathrm{M}$ solution) (9:1 v/v) to obtain polymer precipitates. The crude polymer was collected by filtration and then purified by Soxhlet extraction with acetone, hexane, and chloroform, successively. The polymer was obtained as a dark blue solid (184 mg, 87\%). $\mathrm{M}_{\mathrm{n}}=48.83 \mathrm{kDa}, \mathrm{M}_{\mathrm{w}}=265.7 \mathrm{kDa}$, and PDI $=5.44 .{ }^{1} \mathrm{H}$ NMR $(300 \mathrm{MHz})$; $\delta(\mathrm{ppm})$ 0.67-1.68 (br. 108H, aliphatic-H); 8.52-9.23 (br. 12H, aromatic-H). Anal. calcd for $\mathrm{C}_{88} \mathrm{H}_{132} \mathrm{~N}_{2} \mathrm{O}_{2} \mathrm{~S}_{2}$ : C 80.43, H 10.12, N 2.13, S 4.88; found: C 80.12, H 9.99, N 2.03, S, 4.59. $v_{\max }\left(\right.$ PDPPPy film on KBr pellet $/ \mathrm{cm}^{-1}$ ) : 2992-2809 (CH stretch), 1660 (C=O), 1552, 1427 (C=C aromatic stretch)

## Synthesis of PDPPNDT, (2) ${ }^{1}$

2,5-Di(2-dodecylhexadecyl)-3,6-bis-(5-bromothiophenyl)-1,4-diketopyrrolo[3,4-c]pyrrole ( $150 \mathrm{mg}, 0.012 \mathrm{mmol}$ ) and bis(trimethyl-stannyl)NDT ( $68.3 \mathrm{mg}, 0.012 \mathrm{mmol}$ ) were dissolved in 15 mL of degassed anhydrous toluene. Subsequently, a catalyst, $\mathrm{Pd}_{2}(\mathrm{dba})_{3}(1.5 \mathrm{mg}, 2$ mol\%) and $\mathrm{P}(o \text {-tolyl })_{3}$ ( $2 \mathrm{mg}, 8 \mathrm{~mol} \%$ ), were added to the reaction mixture, and the mixture was kept at $95{ }^{\circ} \mathrm{C}$ for 36 h under argon atmosphere. Then, the mixture was cooled down to
room temperature, and the polymer precipitated in a 200 mL methanol/ HCl ( 1 M solution) ( $9: 1 \mathrm{v} / \mathrm{v}$ ). The crude polymer was collected by filtration and then purified by Soxhlet extraction with acetone, hexane, and chloroform, successively. The resulting polymer was obtained as dark green-purple solid ( $114 \mathrm{mg}, 72 \%$ ). $\mathrm{M}_{\mathrm{n}}=30.7 \mathrm{kDa}, \mathrm{M}_{\mathrm{w}}=65.5 \mathrm{kDa}$, and PDI $=2.13 .{ }^{1} \mathrm{H}$ NMR (300MHz, $\mathrm{CDCl}_{3}$ ); $\delta(\mathrm{ppm})$ 0.63-1.66 (br. 108H, aliphatic-H); 8.26-9.25 (br. 10 H , aromatic-H). Anal. calcd for $\mathrm{C}_{88} \mathrm{H}_{134} \mathrm{~N}_{2} \mathrm{O}_{2} \mathrm{~S}_{4}$ : C 76.54, H 9.79, N 2.03, S 9.29; found: C 76.10, H 9.58, N 2.10, S 9.45. $v_{\max }\left(\right.$ PDPPNDT film on KBr pellet $\left./ \mathrm{cm}^{-1}\right): 2981-2805(\mathrm{CH}$ stretch), 1663 ( $\mathrm{C}=\mathrm{O}$ ), 1551, 1428 ( $\mathrm{C}=\mathrm{C}$ aromatic stretch).

## Synthesis of PDPPBDT, (3)

2,5-Di(2-dodecylhexadecyl)-3,6-bis-(5-bromothiophenyl)-1,4-diketopyrrolo[3,4-c]pyrrole ( $130 \mathrm{mg}, 0.01 \mathrm{mmol}$ ) and bis(trimethyl-stannyl)BDT ( $65 \mathrm{mg}, 0.01 \mathrm{mmol}$ ) were dissolved in 12 mL of degassed anhydrous toluene. Subsequently, a catalyst, $\mathrm{Pd}_{2}(\mathrm{dba})_{3}(1.5 \mathrm{mg}, 2 \mathrm{~mol} \%)$ and $\mathrm{P}(o \text {-tolyl })_{3}(2 \mathrm{mg}, 8 \mathrm{~mol} \%)$, were added to the reaction mixture, and the mixture was kept at $95{ }^{\circ} \mathrm{C}$ for 37 h under argon atmosphere. Then, the mixture was cooled down to room temperature, and the polymer precipitated in a 200 mL methanol $/ \mathrm{HCl}(1 \mathrm{M}$ solution) ( $9: 1 \mathrm{v} / \mathrm{v}$ ). The crude polymer was collected by filtration and then purified by Soxhlet extraction with acetone, hexane, and chloroform, successively. The resulting polymer was obtained as dark green-purple solid (127 mg, 93\%). $\mathrm{M}_{\mathrm{n}}=56.8 \mathrm{kDa}, \mathrm{M}_{\mathrm{w}}=136.7 \mathrm{kDa}$, and PDI $=2.40 .{ }^{1} \mathrm{H}$ NMR ( 300 MHz ); $\delta(\mathrm{ppm})$ 0.75-1.65 (br, 108H, aliphatic-H); 8.34-9.20 (br, 8H, aromatic-H). Anal. calcd for $\mathrm{C}_{82} \mathrm{H}_{128} \mathrm{~N}_{2} \mathrm{O}_{2} \mathrm{~S}_{4}$ : C 75.63, H 9.91, N 2.15, S 9.85; found: C 75.54, H 9.87, N 2.01, S 9.72. $v_{\max }\left(P D P P B D T\right.$ film on KBr pellet $\left./ \mathrm{cm}^{-1}\right): 3003-2802(\mathrm{CH}$ stretch), 1664 (C=O), 1555, 1431 ( $\mathrm{C}=\mathrm{C}$ aromatic stretch).

## Synthesis of PDPPDTT (4)

PDPPDTT was synthesized with the same method used for PDPPBDT using 2,5-di(2-dodecylhexadecyl)-3,6-bis-(5-bromothiophenyl)-1,4-diketopyrrolo[3,4-c]pyrrole (100 mg, 0.08 mmol ) and bis(trimethyl-stannyl)DTT ( $50 \mathrm{mg}, 0.1 \mathrm{mmol}$ ). The polymerization mixture was kept at $95{ }^{\circ} \mathrm{C}$ for 2 days. The resulting polymer was obtained (100 mg, 95\%). $\mathrm{M}_{\mathrm{n}}=$ $68.0 \mathrm{kDa}, \mathrm{M}_{\mathrm{w}}=180.0 \mathrm{kDa}$, and $\mathrm{PDI}=2.65 .{ }^{1} \mathrm{H}$ NMR (300MHz); $\delta(\mathrm{ppm}) 0.75-1.66(\mathrm{br}$, 108 H , aliphatic-H); 8.24-9.25 (br, 6 H , aromatic-H). Anal. calcd for $\mathrm{C}_{78} \mathrm{H}_{120} \mathrm{~N}_{2} \mathrm{O}_{2} \mathrm{~S}_{5}$ : C 73.30, H 9.46, N 2.19, S 12.54; found: C 72.18, H 9.33, N 1.99, S 12.63. $v_{\max }$ (PDPPDTT film on KBr pellet/cm ${ }^{-1}$ ) : 2990-2807 ( CH stretch), 1664 ( $\mathrm{C}=\mathrm{O}$ ), 1551, 1431 ( $\mathrm{C}=\mathrm{C}$ aromatic stretch).

## Synthesis of PDPPTTTT (5)

PDPPDTT was synthesized with the same method used for PDPPBDT using bis(trimethylstannyl)TTTT (46 mg, 0.08 mmol ) and 2,5-di(2-dodecylhexadecyl)-3,6-bis-(5-bromothiophenyl)-1,4-diketopyrrolo[3,4-c]pyrrole. The polymerization mixture was kept at $95{ }^{\circ} \mathrm{C}$ for 10 h . The pure polymer was obtained as a dark green-purple solid ( $106 \mathrm{mg}, 98 \%$ ). $\mathrm{M}_{\mathrm{n}}=58.1 \mathrm{kDa}, \mathrm{M}_{\mathrm{w}}=171.7 \mathrm{kDa}$, and PDI $=2.95 .{ }^{1} \mathrm{H}$ NMR $(300 \mathrm{MHz}) ; \delta(\mathrm{ppm})$ 0.72-1.68 (br, 108 H , aliphatic-H); 8.21-9.24 (br, 6 H , aromatic-H). Anal. calcd for $\mathrm{C}_{80} \mathrm{H}_{120} \mathrm{~N}_{2} \mathrm{O}_{2} \mathrm{~S}_{6}$ : C 72.02, H 9.07, N 2.10, S 14.42; found: C 72.17, H 9.11, N 1.99, S 14.88. $v_{\max }$ (PDPPTTTT film on KBr pellet $/ \mathrm{cm}^{-1}$ ) : 3002-2821 ( CH stretch), 1664 ( $\mathrm{C}=\mathrm{O}$ ), 1551, 1434 ( $\mathrm{C}=\mathrm{C}$ aromatic stretch).
3. FT-IR spectra of the monomers and polymers.

Figure S6. FT-IR spectrum of 2,5-di(2-dodecylhexadecyl)-3,6-bis-(5-bromothiophenyl)-1,4-diketopyrrolo[3,4-c]pyrrole. $v_{\max }\left(\mathrm{KBr}\right.$ pellet $/ \mathrm{cm}^{-1}$ ) : 2998-2798 ( CH stretch), 1673 ( $\mathrm{C}=\mathrm{O}$ ), 1561, 1416 (C=C aromatic stretch).

## 7. AFM height images of the polymer films

Figure S30. AFM height images of (a) PDPPPy, (b) PDPPNDT, (c) PDPPBDT, (d) PDPPDTT, and (e) PDPPTTTT thin films annealed thermally at $200^{\circ} \mathrm{C}$.

## 8. Transfer and output curves of TFTs made of the polymers

Figure S31. (a), (c) Transfer and (b), (d) output curves of TFTs made of PDPPPy. $V_{\mathrm{DS}}=-100$ V (a), (b) unannealed films and (c), (d) films annealed at $200^{\circ} \mathrm{C}$.

Figure S32. (a), (c) Transfer and (b), (d) output curves of TFTs made of PDPPNDT. $V_{D S}=-$ 100 V (a), (b) unannealed films and (c), (d) films annealed at $200^{\circ} \mathrm{C}$.

Figure S33. (a), (c) Transfer and (b), (d) output curves of TFTs made of PDPPBDT. $V_{\mathrm{DS}}=-$ 100 V (a), (b) unannealed films and (c), (d) films annealed at $200^{\circ} \mathrm{C}$.

Figure S34. (a), (c) Transfer and (b), (d) output curves of TFTs made of PDPPDTT. $V_{\mathrm{DS}}=-$ 100 V (a), (b) unannealed films and (c), (d) films annealed at $200^{\circ} \mathrm{C}$.

Figure S35. (a), (c) Transfer and (b), (d) output curves of TFTs made of PDPPTTTT. $V_{\mathrm{DS}}=-$ 100 V (a), (b) unannealed films and (c), (d) films annealed at $200^{\circ} \mathrm{C}$.

## 9. Properties of resistor-loaded inverters

Figure S36. Resistor loaded inverters. (a) poly(3-hexylthiophene) (P3HT)-based RL-inverter at 10 Hz . (hole mobility of $5 \times 10^{-3} \mathrm{~cm}^{2} \mathrm{~V}^{-1} \mathrm{~s}^{-1}$ ). (b) PDPPTTTT-based RL-inverter at 10 Hz exhibiting a hole mobility of $3.2 \mathrm{~cm}^{2} \mathrm{~V}^{-1} \mathrm{~s}^{-1}$ at $V_{\mathrm{DS}}=-100 \mathrm{~V}$.

Figure S37. Dynamic output voltage response of PDPPTTTT polymer-based RL-inverter.
Output responses when the input voltage was switched from 10 Hz to 1 kHz .

Figure S37 shows the drain current output ( $V_{\text {out }}$ ) of PDPPTTTT-based inverter in response to 10 Hz and 1 kHz square-wave gate voltage input $\left(V_{\mathrm{IN}}\right)$ signals when the drain voltage ( $\mathrm{V}_{\mathrm{DD}}$ ) was fixed at -60 V . It is clearly observed that the output voltage ( $V_{\text {OUT }}$ ) of the inverter tracks the trace of the input square wave gate voltage signal $\left(V_{\mathrm{G}}=V_{\mathrm{IN}}\right)$ even at 1 kHz .

Figure S38. Output voltages at "ON" and "OFF" states of PDPPTTTT-based resistor-loaded inverter as a function of switching frequency. *Square: $\mathrm{V}_{\text {out }}{ }^{\mathrm{ON}} / \mathrm{V}_{\text {out }}{ }^{\mathrm{OFF}}$

Figure S39. Input-output voltage characteristics of the PDPPTTTT RL-inverter measured with increasing and decreasing input voltage, $V_{\mathrm{IN}}$. $\left(V_{\mathrm{DD}}=-60 \mathrm{~V}\right)$. Inset: voltage gain in the inverter as a function of $V_{\text {IN }}$.

The voltage transfer characteristics ( $\mathrm{V}_{\mathrm{IN}}-\mathrm{V}_{\mathrm{OUT}}$ ) and corresponding gain of the RL inverter based on DPPPTTTT for forward (i.e., from 0 V to -60 V ) and reverse (i.e., from -60 V to 0 V) scans at $V_{D D}=-60 \mathrm{~V}$ are shown in Figure S39. It is clear that the output voltage switched between logic from " 1 " state ( -60 V ) to the " 0 " state ( $\sim-2.0 \mathrm{~V}$ ) when the input signal was swept from -60 V to 0 V . The RL inverter shows a clear switching response with moderate hysteresis ( $\Delta \mathrm{V}=3 \mathrm{~V}$ ) between 0 V and -60 V with a voltage gain (i.e., $\mathrm{dV}_{\text {out }} / \mathrm{dV}_{\text {IN }}$ ) of almost 7.
