1. General ..... S3
2. General procedure for enantioselective nitro-Mannich reaction ..... S3
3. Optimization of reaction condition ..... S4
4. Analytical data for product of nitro-Mannich reaction ..... S5
5. X-ray crystallographic analysis of rac-2g ..... S11
6. Reduction of nitro group ..... S12
7. Deprotection of Boc group ..... S13
8. ESI-MS spectra ..... S14
9. ${ }^{1} \mathrm{H}$ NMR and ${ }^{13} \mathrm{C}$ NMR spectra ..... S16
10. HPLC data ..... S32

## 1. General

Dry solvents were purchased from commercial suppliers and used without further purification. Analytical thin-layer chromatography (TLC) was performed on glass plates coated with 0.25 mm 230-400 mesh silica gel containing a fluorescent indicator (Merck, \#1.05715.0009). Silica gel column chromatography was performed on Kanto silica gel 60 (spherical, 100-210 $\mu \mathrm{m}$ ). ${ }^{1} \mathrm{H}$ NMR spectra were recorded on JEOL ECS-400 ( 400 MHz ), ECA-500 $(500 \mathrm{MHz})$ spectrometers. Chemical shifts of ${ }^{1} \mathrm{H}$ NMR spectra were reported relative to tetramethylsilane $(\delta 0) .{ }^{13} \mathrm{C}$ NMR spectra were recorded on JEOL ECS-400 (100 MHz), ECA-500 ( 125 MHz ) spectrometers. Chemical shifts of ${ }^{13} \mathrm{C}$ NMR spectra were reported relative to $\mathrm{CDCl}_{3}(\delta 77.0)$, acetone-d $\mathrm{d}_{6}(\delta 29.84)$ or DMSO-d ${ }_{6}(\delta 39.52)$. Splitting patterns were reported as s, singlet; d, doublet; $t$, triplet; q, quartet; dd, double doublet; $m$, multiplet; br, broad.
General experimental details for synthesis of PyBidine ligand have been described. ${ }^{1)}$ Substrates were synthesized according to known procedure. ${ }^{2,3)}$

## 2. General procedure for enantioselective nitro-Mannich reaction

PyBidine $(0.011 \mathrm{mmol})$ and $\mathrm{NiCl}_{2}(0.01 \mathrm{mmol})$ were added to a two-necked round-bottomed flask containing a stir bar under Ar. Dichloromethane $(2.00 \mathrm{~mL})$ was added to the flask and the mixture was stirred for 6 hours. After removal of the solvent under reduced pressure, toluene ( 1.00 mL ) was added as a reaction solvent. To the resulting solution, nitromethane ( 2.00 mmol ), DIPEA ( 0.02 $\mathrm{mmol})$ and $N$-Boc ketimine ( 0.20 mmol ) were added at $30^{\circ} \mathrm{C}$. After being stirred for appropriate time, the reaction mixture was quenched by water, extracted with ethyl acetate, dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$. After removal of the solvent under reduced pressure, the resulting crude mixture was purified by silica gel column chromatography to give the product. The enantiomeric excesses of the products were determined by chiral stationary phase HPLC by using Daicel Chiralcel OD-H and Chiralpak AD-H columns.

## 3. Optimization of reaction condition

Table S1. Effect of base

## 4. Analytical data for product of nitro-Mannich reaction

## (R)-tert-butyl (1-methyl-3-(nitromethyl)-2-oxoindolin-3-yl)carbamate (2a)

## 5. X-ray crystallographic analysis of rac-2g

Scheme S1. Recrystallization of nitro-Mannich product $\mathbf{2 g}$

Figure S1. X-ray structure of rac. nitro-Mannich product $\mathbf{2 g}$

## 6. Reduction of nitro group

Tert-butyl (1-methyl-3-(nitromethyl)-2-oxoindolin-3-yl)carbamate (2a, 0.19 mmol ) and $\mathrm{NiCl}_{2} \cdot 6 \mathrm{H}_{2} \mathrm{O}(0.19 \mathrm{mmol})$ were added to a two-necked round-bottomed flask containing a stir bar under Ar. Methanol $(1.90 \mathrm{~mL})$ was added to the flask and the mixture was stirred at $0{ }^{\circ} \mathrm{C}$. Sodium borohydride ( 2.28 mmol ) was added and stirred for 40 min at $0^{\circ} \mathrm{C}$. The reaction mixture was quenched by saturated $\mathrm{NH}_{4} \mathrm{Cl}$ aq., extracted with dichloromethane, dried with $\mathrm{Na}_{2} \mathrm{SO}_{4}$. The resulting solution was concentrated under reduced pressure to afford adduct. The enantiomeric excesses of the products were determined by chiral stationary phase HPLC by using Daicel Chiralpak AS-H column.

## (R)-tert-butyl (3-(aminomethyl)-1-methyl-2-oxoindolin-3-yl)carbamate

${ }^{1} \mathrm{H}$ NMR ( $400 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ): $\delta 1.24(\mathrm{~s}, 9 \mathrm{H}), 2.95(\mathrm{~s}, 2 \mathrm{H}), 3.24(\mathrm{~s}, 3 \mathrm{H}), 5.96(\mathrm{~s}, 1 \mathrm{H}), 6.85(\mathrm{~d}, J=7.7$ $\mathrm{Hz}, 1 \mathrm{H}), 7.05-7.09(\mathrm{~m}, 1 \mathrm{H}), 7.26-7.33(\mathrm{~m}, 2 \mathrm{H}) ;{ }^{13} \mathrm{C}$ NMR ( $100 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ): $\delta 26.23,27.87,48.21$, $62.35,79.99,108.01,122.26,122.51,128.70,130.12,143.17,154.47,176.48$; HRMS (ESI + ) calcd for $\mathrm{C}_{15} \mathrm{H}_{22} \mathrm{O}_{3} \mathrm{~N}_{3}(\mathrm{M}+\mathrm{H})^{+}$292.1656: found 292.1651; enantiomeric excess was determined by HPLC with a Chiralpak AS-H column (hexane:2-propanol= 90:10, $1.0 \mathrm{ml} / \mathrm{min}, 254 \mathrm{~nm}$ ); major enantiomer $\mathrm{Rt}=13.9 \mathrm{~min}$, minor enantiomer $\mathrm{Rt}=19.6 \mathrm{~min} ;[\alpha]_{\mathrm{D}}{ }^{21}=-28.2\left(c=1.0, \mathrm{CHCl}_{3}, 97 \%\right.$ ee $)$.

## 7. Deprotection of Boc group

Tert-butyl (5-bromo-1-methyl-3-(nitromethyl)-2-oxoindolin-3-yl)carbamate ( $\mathbf{2 g}, 0.17 \mathrm{mmol}$ ) was added to a round-bottomed flask containing a stir bar under air. Dichloromethane ( 3.40 mL ) was added to the flask and the mixture was stirred at $0^{\circ} \mathrm{C}$. TFA $(1.70 \mathrm{~mL})$ was added and stirred for 30 $\min$ at $0^{\circ} \mathrm{C}$. The reaction mixture was concentrated under reduced pressure and azeotroped with toluene. The resulting crude mixture was purified by silica gel column chromatography to give the product. The enantiomeric excesses of the products were determined by chiral stationary phase HPLC by using Daicel Chiralcel OD-H column.
