## Supplementary Figures

Figure S2. Incorporation of modified 7-deazaguanosine triphosphates in NEAR. In all the experiments, natural dATP, dCTP and dTTP were used together with the modified $\mathbf{d G}^{\mathbf{X}} \mathbf{T P}$ as indicated in the title of the line. $\mathbf{L}=$ DNA ladder. Template Nick2. The standard reaction conditions were used.

Figure S3. Comparison of the outcome of NEAR with natural dNTPs under the conditions optimized for natural dNTPs (a), and under the conditions used for modified dNTPs (b). The results suggest that for shorter ONs (10-18 nt), conditions (a) are more favourable, while for longer ONs (above 20 nt ) the reaction should be done according to the same protocol as with modified dNTPs.

Figure S4. HPLC chromatograms of crude NEAR mixtures (semi-preparative reactions). Column XBridge OST C18 $2.5 \mu \mathrm{M}(4.6 \times 50 \mathrm{~mm})$. Mobile phase A: 0.1 M TEAA, B: acetonitrile/0.1M TEAA, $20 / 80(\mathrm{v} / \mathrm{v})$. Flow rate: $1 \mathrm{~mL} / \mathrm{min}$. Gradient 40 to $80 \%$ B in 53 min .

## Synthesis of Modified dNTPs

## General remarks

Ethynylferrocene was purchased from Molekula Deutschland Ltd and 5-formylthiophene-2--boronic acid from Frontier Scientific. NMR spectra were measured on Bruker Avance 500 at 500 MHz for ${ }^{1} \mathrm{H}, 200 \mathrm{MHz}$ for ${ }^{31} \mathrm{P}$ and 125.7 MHz for ${ }^{13} \mathrm{C}$, in 50 mM phosphate buffer (in $\mathrm{D}_{2} \mathrm{O}$ ) at pD 7.1 (reference to dioxane as internal standard, $\delta_{\mathrm{H}}=3.75 \mathrm{ppm}, \delta_{\mathrm{C}}=67.19 \mathrm{ppm}$ ). ${ }^{31} \mathrm{P}$ NMR spectra were referenced to the phosphate buffer signal ( $\delta=2.35 \mathrm{ppm}$ ). Chemical shifts are given in ppm ( $\delta$ scale), coupling constants ( $J$ ) in Hz. Mass spectra were measured by ESI. High resolution mass spectra were measured on a LTQ Orbitrap XL (Hermo Fischer Scientific) spectrometer using ESI ionization technique.
