## **General Remarks.**

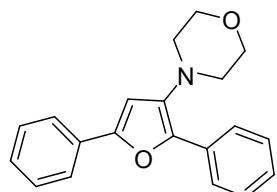

All reactions were carried out under an air atmosphere condition. Various reagents were purchased from Aldrich, Acros or Alfa. The compounds **1** were prepared according literature from acetophenone. Flash column chromatography was performed using silica gel (200–300 mesh). Analytical thin-layer chromatography was performed using glass plates pre-coated with 200–300 mesh silica gel impregnated with a fluorescent indicator (254 nm). NMR spectra were recorded in CDCl<sub>3</sub> on Bruker NMR-300 (300MHz), NMR-400 (400MHz) and NMR-500 (500MHz) with TMS as an internal reference. The model of HRMS is Bruker maXis UHR-TOF.

## **General Procedure for Au-catalyzed Three-component Reactions.**

A solution of phenylglyoxal derivatives **1** (1 mmol), amine **2** (1.5 mmol), AuBr<sub>3</sub> (8.7 mg, 0.02 mmol) and alkyne **3** (2 mmol) in anhydrous menthol (1 mL) was stirred at 60 °C for 12 h under N<sub>2</sub> atmosphere. After completion of the reaction (observed on TLC), the solvent was evaporated under reduced pressure to obtain the crude mixture. The residues was purified by silica-gel column chromatography (Ethyl acetate / Petroleum ether = 1/10 - 1/4) to afford the pure product **4**. The obtained product was analyzed by <sup>1</sup>H NMR, <sup>13</sup>C NMR and HRMS.
