# One Pot Synthesis of Mikto 3-arm AB $\mathbf{A}_{2}$ Stars Constructed from Linear and Macrocyclic Polymer Chains. 

Jakov Kulis, Zhongfan Jia and Michael J. Monteiro*

Australian Institute for Bioengineering and Nanotechnology, University of Queensland, Brisbane 4072, Australia.

## Synthesis of 4-propargyloxy-2,2,6,6-tetramethylpiperidin-1-yloxyl (TEMPO- )

This compound was synthesized according to the method of Ciampolini et al. and is well documented. ${ }^{1}$

### 1.1 Synthesis of Alkyne(Hydroxyl) ATRP Initiator

Scheme S1: Synthesis of alkyne(hydroxyl) ATRP initiator. (i) $\mathrm{K}_{2} \mathrm{CO}_{3}$, acetone, reflux for 24 h ; (ii) TEA, THF at $0^{\circ} \mathrm{C}$.

Synthesis of Alkyne(hydroxyl) ATRP initiator. This compound was prepared by slight modification to the literature procedure. ${ }^{2}$

## Preparation of 2,2'-(prop-2-ynylazanediyl)diethanol

To a mixture of diethanolamine ( $10.5 \mathrm{~g}, 0.100 \mathrm{~mol}$ ) and anhydrous $\mathrm{K}_{2} \mathrm{CO}_{3}(14 \mathrm{~g}, 0.10 \mathrm{~mol})$ in acetone ( 200 mL ) under argon was charged propargyl bromide ( $10 \mathrm{~mL}, 0.09 \mathrm{~mol}$ ). The reaction mixture was refluxed at $80^{\circ} \mathrm{C}$ for 24 h with stirring. The reaction mixture was then cooled to RT, the potassium salts filtered off and the mixture was concentrated to give crude, viscous oil. This crude product was then purified by vacuum distillation ( $114{ }^{\circ} \mathrm{C}, 0.04 \mathrm{mmHg}$ ) to give a yellow viscous oil which became even more viscous (solid-like) on cooling ( $5.77 \mathrm{~g}, 86.8 \%$ ). ${ }^{1} \mathrm{H}$ NMR ( $\delta$, ppm, $\left.\mathrm{CDCl}_{3}\right): 3.66(\mathrm{~m}, 4 \mathrm{H}, \mathrm{N}(\mathrm{CH} 2 \mathrm{CH} 2 \mathrm{OH}) 2), 3.49(\mathrm{~m}, 2 \mathrm{H}, \mathrm{NCH} 2 \mathrm{C} \equiv \mathrm{CH}), 2.77(\mathrm{~m}, 4 \mathrm{H}$,
$\mathrm{N}(\mathrm{CH} 2 \mathrm{CH} 2 \mathrm{OH}) 2), 2.35$ (s, broad, $2 \mathrm{H},(\mathrm{CH} 2 \mathrm{OH}) 2) ; 2.21$ (m, 1H, NCH2C $\equiv \mathrm{CH})$; LR-ESI-MS (MH+) Calc. $m / z$ 144.10 Found $m / z$ 144.07.

## Preparation of 2-((2-hydroxyethyl)(prop-2-yn-1-yl)amino)ethyl 2-bromo-2-methylpropanoate

 2-Bromoisobutyryl bromide $\left(4.65 \mathrm{~g}, 2.02 \times 10^{-2} \mathrm{~mol}\right)$ was added dropwise to a solution of $2,2^{\prime}$ -(prop-2-ynylazanediyl)diethanol $\left(2.88 \mathrm{~g}, 2.01 \times 10^{-2} \mathrm{~mol}\right)$ and triethylamine $\left(2.03 \mathrm{~g}, 2.00 \times 10^{-2}\right.$ $\mathrm{mol})$ in dry THF $(180 \mathrm{~mL})$ at $0^{\circ} \mathrm{C}$. The solution was stirred at this temperature for 30 min then RT for 3 h . The mixture was then reduced in volume to dryness, transferred to a separation funnel with ethyl acetate ( 100 mL ) and rinsed with de-ionized water ( $3 \times 100 \mathrm{~mL}$ ) and brine $(100 \mathrm{~mL})$. The organic phase was then dried over $\mathrm{MgSO}_{4}$, and the solvent was removed by rotary evaporation. The crude extract was further purified on a silica column (EtOAc/PET ether) and the second fraction was collected to give the pure viscous oil product ( $3.55 \mathrm{~g}, 60.5 \%$ ). $\mathrm{R}_{\mathrm{f}}$ ( $1 / 1 \mathrm{EtOAc} /$ PET ether) 0.25 ; ${ }^{1} \mathrm{H}$ NMR ( $\delta, \mathrm{ppm}, \mathrm{CDCl}_{3}$ ): $4.28(\mathrm{~m}, 2 \mathrm{H}, \mathrm{NCH} 2 \mathrm{CH} 2 \mathrm{OCO}), 3.59(\mathrm{~m}, 2 \mathrm{H}, \mathrm{NCH} 2 \mathrm{CH} 2 \mathrm{OH}), 3.50(\mathrm{~m}$, $2 \mathrm{H}, \mathrm{NCH} 2 \mathrm{C} \equiv \mathrm{CH}$ ), 2.91 (m, 2H, NCH2CH2OCO); 2.77 (m, 2H, NCH2CH2OH); 2.22 (m, 1H, $\mathrm{NCH} 2 \mathrm{C} \equiv \mathrm{CH}$ ), 1.94 (m, 6H, OCOC(CH3)2Br). Microanalysis: Calculated for C 11 H 18 BrNO : C , 45.22; H, 6.21; N, 4.79 Found: C, 45.22; H, 6.40; N, 4.77.
### 1.2 Synthesis of Tri-functional Core (1)

This compound was synthesized according to previously described procedure ${ }^{3}$

(i) $\mathrm{K}_{2} \mathrm{CO}_{3}$, propargyl bromide, $18-\mathrm{c}-6$, acetone, reflux 24 h ; (ii) $2 \mathrm{M} \mathrm{NaOH}, \mathrm{MeOH} /$ acetone ( $60: 40 \mathrm{v} / \mathrm{v}$ ), RT, 24 h ; (iii) TEMPO- $=$, EDC.HCl, DMAP, DMF, $0^{\circ} \mathrm{C}-\mathrm{RT}$, 48 h .

Scheme S2: Scheme for the synthesis of tri-functional core $\mathbf{1}$

The trifunctional core $\mathbf{1}$ was synthesized according to previously described literature. ${ }^{3}$

Synthesis of dimethyl 5-(prop-2-yn-1-yloxy)isophthalate
This compound was synthesized according to the literature procedure of Joralemon et al. ${ }^{4}$

Synthesis of 5-(prop-2-yn-1-yloxy)isophthalic acid

Dimethyl 5-(prop-2-yn-1-yloxy)isophthalate ( $10.04 \mathrm{~g}, 0.040 \mathrm{~mol}$ ) was stirred in 400 mL MeOH at RT. To this suspension was added 2 M NaOH solution ( 160 mL ) and acetone ( 250 mL ). The solution became clear and was then allowed to stir for 24 hr at room temperature before concentrated by rotary evaporation to remove the volatile organics. The aqueous solution was then
cooled to $0{ }^{\circ} \mathrm{C}$ and acidified with 2 M HCl solution $(200 \mathrm{~mL})$ where a white precipitate formed. This suspension was then stirred for 30 min , vacuum filtered and washed with Milli-Q water ( $3 \times 100$ mL ). The white solid was then dried for 30 min then solubilized in acetone, dried with anhydrous magnesium sulfate, filtered and taken to complete dryness in vacuo. The product was obtained as a white powder ( $7.72 \mathrm{~g}, 86.7 \%$ ) and was used without further purification.

Synthesis of Bis(2,2,6,6-tetramethylpiperidin-4-yloxyl)
5-(prop-2-yn-1-yloxy)isophthalate (BTMPPI) 1

5-(Prop-2-yn-1-yloxy)isophthalic acid ( $6.99 \mathrm{~g}, 0.032 \mathrm{~mol}$ ) and EDC.HCl $(14.86 \mathrm{~g}, 0.078 \mathrm{~mol})$ were stirred in 200 mL DMF at $0{ }^{\circ} \mathrm{C} .4$-(dimethylamino)pyridine (DMAP, $0.95 \mathrm{~g}, 0.008 \mathrm{~mol}$ ) was added and the solution was then allowed to stir for 1 hr before 4-hydroxy TEMPO ( $13.23 \mathrm{~g}, 0.077 \mathrm{~mol}$ ) was added. The solution was further stirred at $0^{\circ} \mathrm{C}$ for 30 min then warmed to RT and stirred for 2 days, after which it was poured into diethyl ether ( 100 mL ) and extracted with Milli-Q water ( 3 x $100 \mathrm{~mL})$, saturated $\mathrm{NaHCO}_{3}(100 \mathrm{~mL})$, Milli-Q water $(100 \mathrm{~mL})$ and finally brine $(100 \mathrm{~mL})$. The organic phase was collected and dried over anhydrous magnesium sulphate, filtered and concentrated by rotary evaporation to dryness. The crude product was purified by column chromatography with ethyl acetate/petroleum spirit $(1 / 4, \mathrm{v} / \mathrm{v})$ as the eluent. The product was obtained as a peach colored solid ( $9.54 \mathrm{~g}, 56.8 \%$ ). Rf ( $1: 1 \mathrm{EtOAc} /$ petroleum spirit) 0.58 ; ESI-MS m/z Theory: 529.64 (M-H+); Found: 530.14; IR (ATR) v(max) 3258 (br), 2977 (br), 1711, 1595, 1463, 1451; Microanalysis: Calculated for $\mathrm{C}_{29} \mathrm{H}_{40} \mathrm{~N}_{2} \mathrm{O}_{7}$ : C, 65.89 ; H, 7.63; N, 5.30; Found: C, $65.38 ; \mathrm{H}, 7.68 ; \mathrm{N}, 5.31 \%$. The presence of paramagnetic nitroxide moieties precluded direct analysis by NMR. Consequently, 5 was reduced to the corresponding hydroxylamine with phenylhydrazine. ${ }^{1} \mathrm{H}$ NMR (CDCl3): $\delta 1.26(\mathrm{~s}, 24 \mathrm{H}, \mathrm{CH} 3 \mathrm{CNO}), 1.75(\mathrm{t}, 4 \mathrm{H}, \mathrm{CHCH} 2 \mathrm{C}), 2.04(\mathrm{dd}$, 4H, CHCH2C), 2.56 (t, $J=2.3 \mathrm{~Hz}, 1 \mathrm{H}, \mathrm{OCH} 2 \mathrm{CCH}), 4.78$ (d, $J=2.3 \mathrm{~Hz}, 2 \mathrm{H}, \mathrm{OCH} 2 \mathrm{CCH}), 5.21$ (b, $2 \mathrm{H}, \mathrm{COOCHCH} 2), 7.81(\mathrm{~s}, 2 \mathrm{H}, \mathrm{ArH}), 8.26(\mathrm{~s}, 1 \mathrm{H}, \mathrm{ArH}) ;{ }^{13} \mathrm{C}$ NMR (CDCl3):165.00, 157.48, $151.21,132.24,123.63,77.54,76.33,68.11,56.25,43.80,31.72,20.74$
