The 42 peaks from HPLC procedure were taken to determine the average molecular weight and the purity, then the complete sequences of native AMPs with ideal purity were analyzed by Edman degradation and the detailed sequences can be checked in Figure S92.

- a. TMW, theoretical average molecular weight calculated at PeptideMass[32].
- b. OMW, observed average molecular weight achieved by mass-spectrometry analysis.

Peak 1 in Figure 3.C8, Peak 1,2 in Figure 3.C11, Peak 3 in Figure 3.C13, totally 4 peaks were not analyzed by Edman degradation for the insufficient purity. Peak 1, 2 in Figure 3.C12 were partially sequenced.
