Contents:

Figure S1. Plot of $1/[trans\text{-}EE]$ versus time in the reaction of *trans*-*EE* with AcMet (1:1 molar ratio) performed in the presence of 100 mM NaCl.

Figure S2. Reaction of *trans*-*EE* with GMP (1:1 molar ratio) performed in the absence and in the presence of equimolar Met.

Scheme S1. Different pathways for the reaction of *trans*-*EE* with GMP in the presence of Met.

Figure S3. 2D $^1\text{H}, ^{15}\text{N}$ HSQC spectra of the product of reaction of *trans*-*EE* with $^{15}\text{N}, ^{13}\text{C}$ Met.

Figure S4. ESI-MS spectrum of the end product formed by transformation of *trans*-[Pt(*E*-iminoether) $_2$ (S-Met) $_2$] at pH 7.

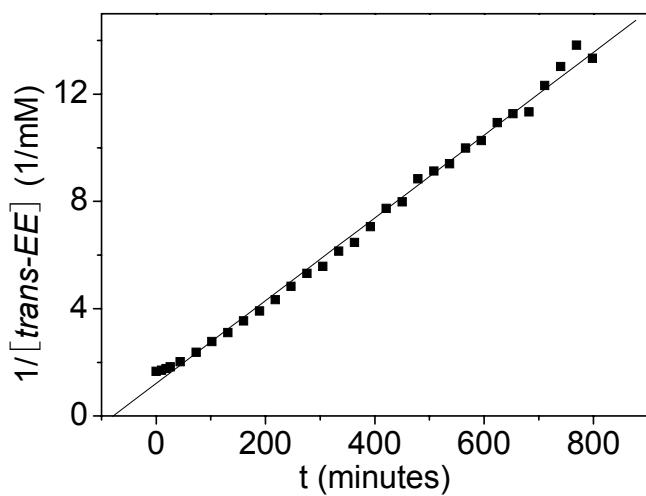

Figure S1. Plot of $1/[trans-EE]$ versus time in the reaction of *trans*-*EE* with AcMet (1:1 molar ratio) performed at 25 °C, at pH 3.1, and in the presence of 100 mM NaCl. The second order rate constant estimated from the slope is $0.26 \pm 0.01 \text{ M}^{-1}\text{s}^{-1}$.

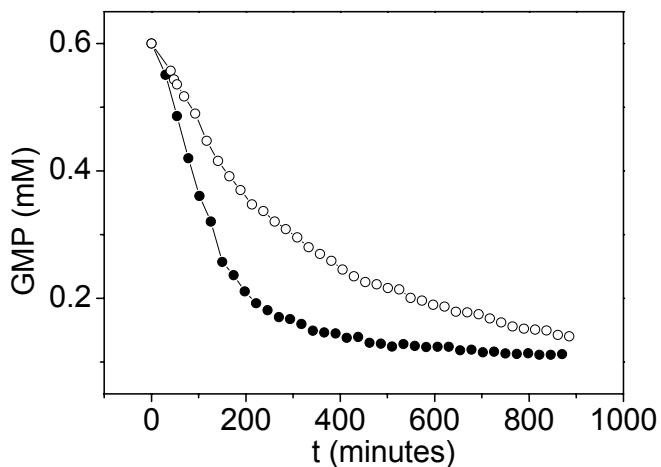

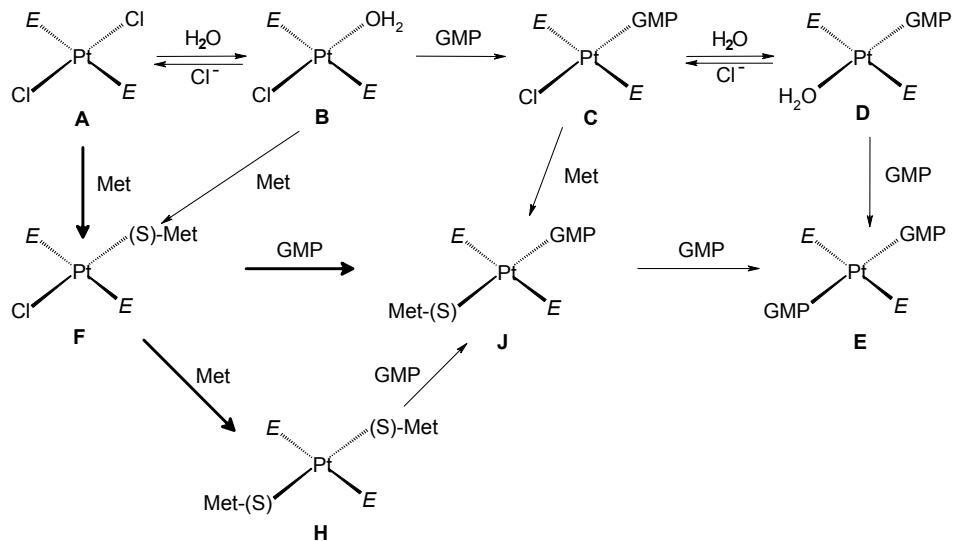

Figure S2. Reaction of 0.6 mM *trans*-EE with 0.6 mM GMP performed in the absence (○) or in the presence (●) of equimolar amount of Met at neutral pH and at 25 °C.

Scheme S1. Summary of the products and reaction pathways which have been shown to occur in the reaction between *trans*-EE and GMP in the presence of Met.

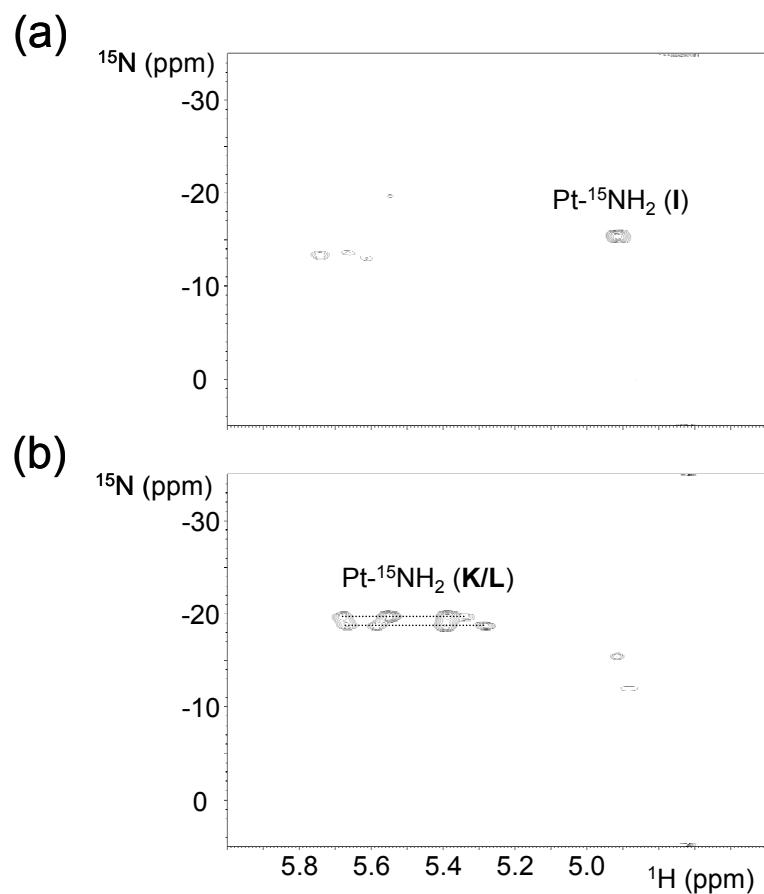

Figure S3. 2D $^1\text{H}, ^{15}\text{N}$ HSQC spectra of the reaction mixture of *trans-EE* and $^{15}\text{N}, ^{13}\text{C}$ Met (1:2.5 molar ratio, pH 7.0, solvent H₂O) after 30 minutes (a) and after 48 hours (b).

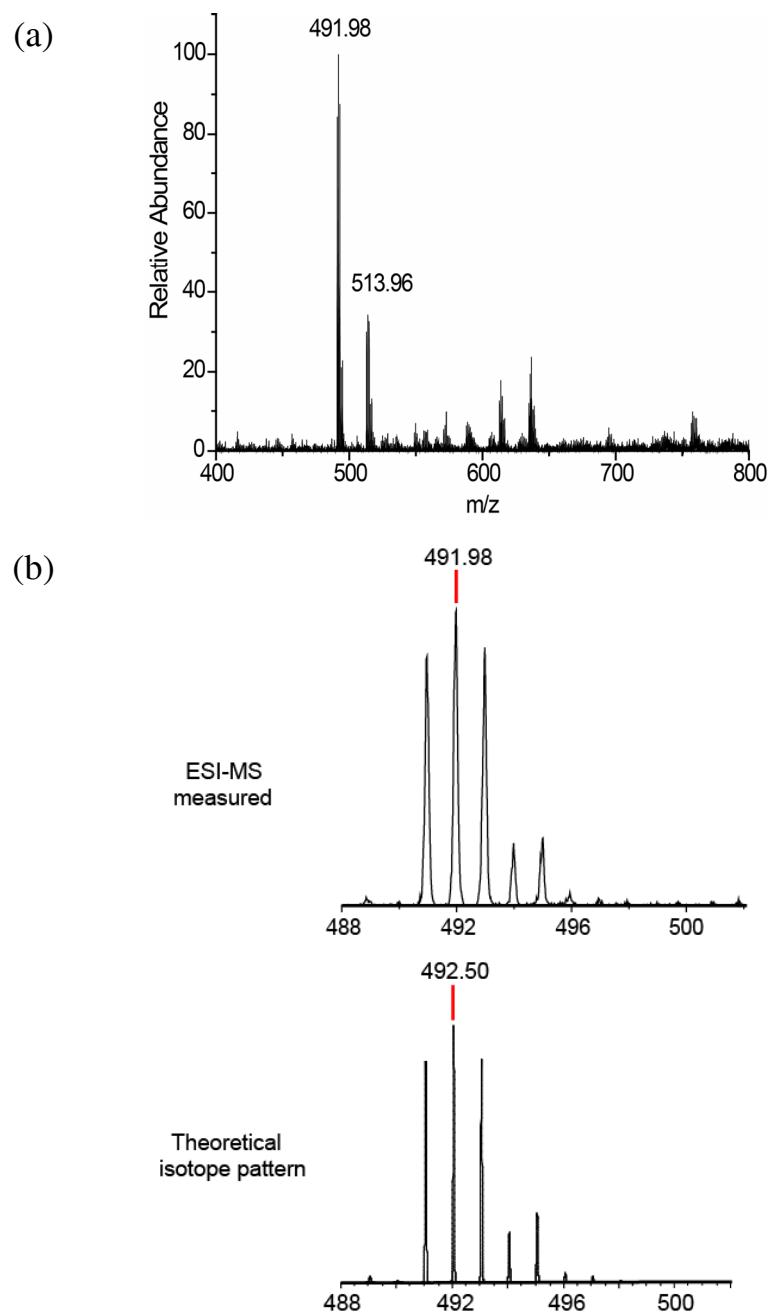

Figure S4. (a): ESI-MS spectrum of the end product formed by the transformation of *trans*-[Pt(*E*-iminoether)₂(S-Met)₂] at pH 7.0. The spectrum was recorded after 24 hours reaction time. The major peak was ([Pt(Met-S,N)₂]⁺, formula: [C₁₀H₂₁N₂O₄PtS₂]⁺, measured m/z = 491.98). The sodium salt peak was observed at m/z = 513.96. (b): ESI-MS experimental (up-portion, measured m/z = 491.98) and theoretical isotope pattern (low-portion, theoretical m/z = 492.50).
