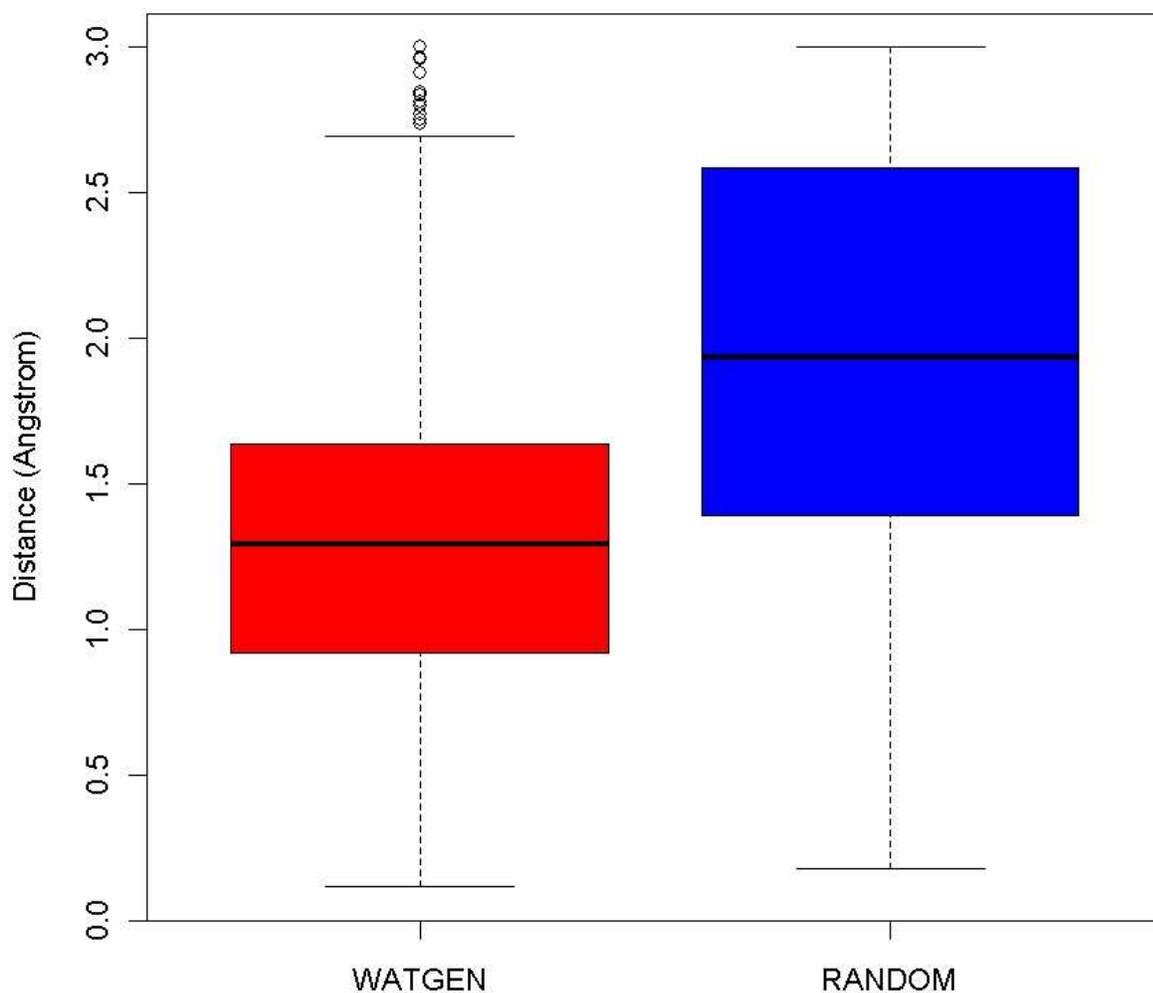

Figure S1. Boxplots of O-O distances between experimental water molecule sites and those in a WATGEN-predicted (red) or a random (blue) network. The quartiles are defined by the edges of the rectangles, which contain 50% of the data. Black horizontal lines within the boxes show medians, circles represent outliers, and dotted lines show the standard deviation. The median values are significantly different ($P < 0.001$ by Wilcoxon rank-sum test).

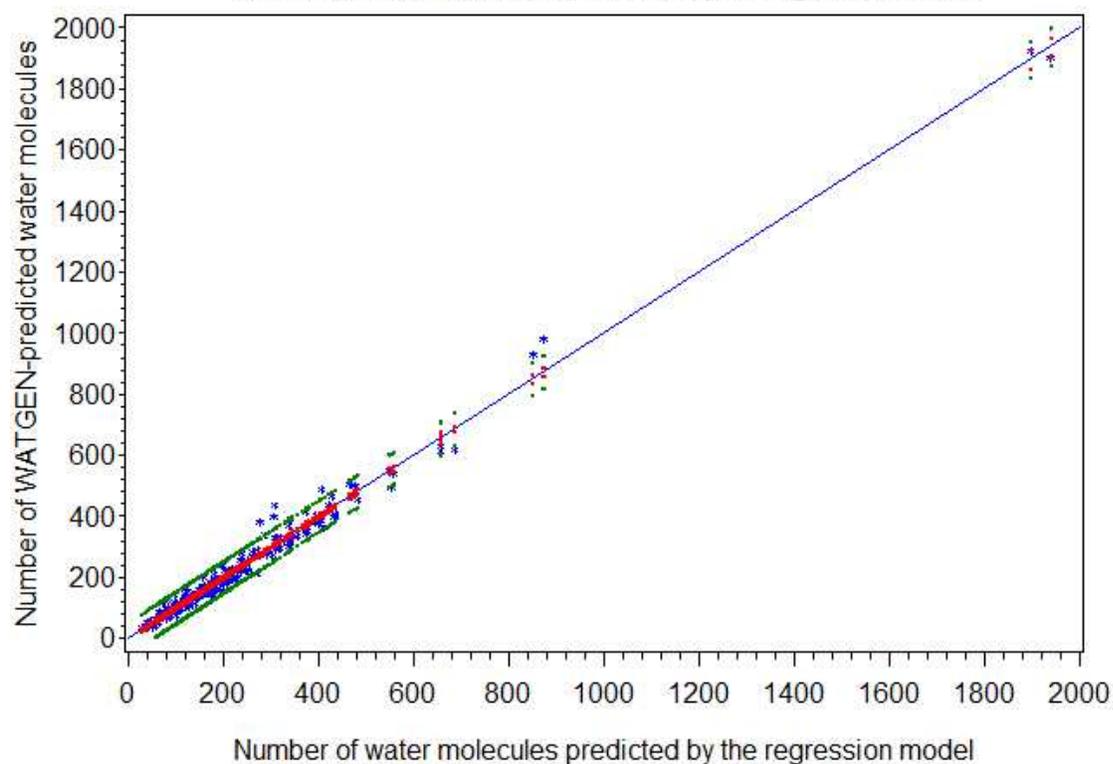

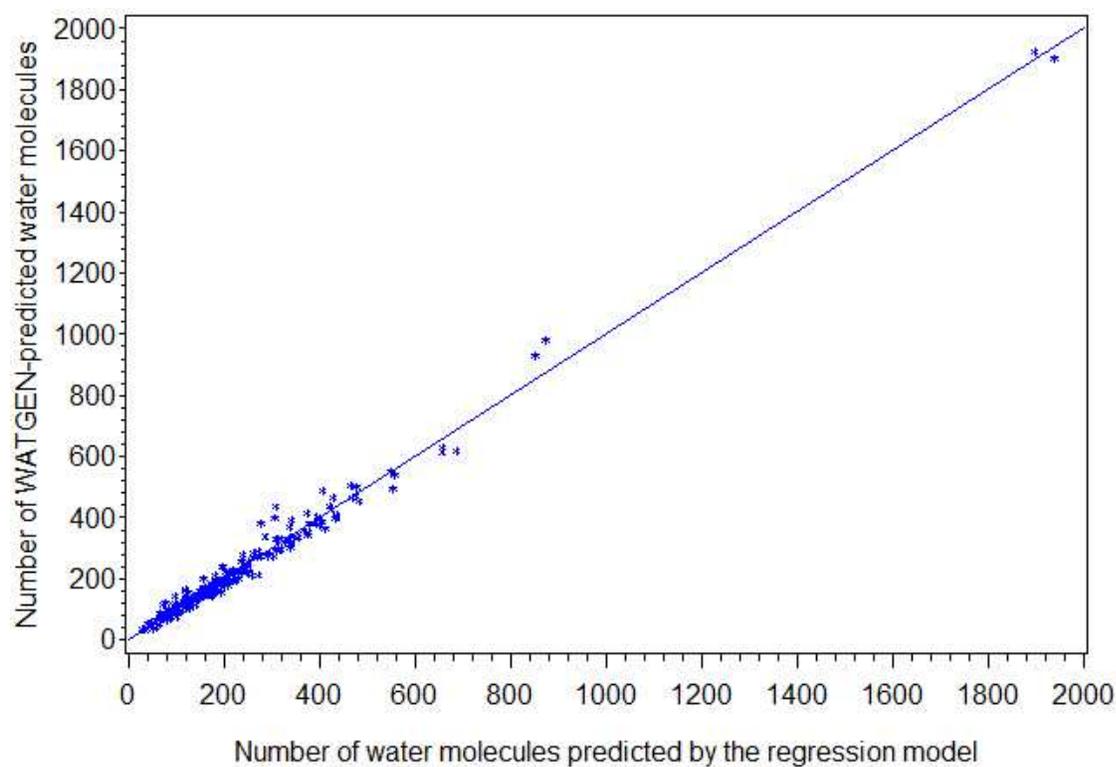

Figure S2. Upper panel. Plot of the number of WATGEN-predicted water molecules vs. the predicted value using the regression model for interface size (Eq. 1). The blue line shows the regression line. Lower panel. Identical plot, with red dots showing the 95% confidence level (CL) of the mean values and green dots showing the 95% CL of the predicted values.
