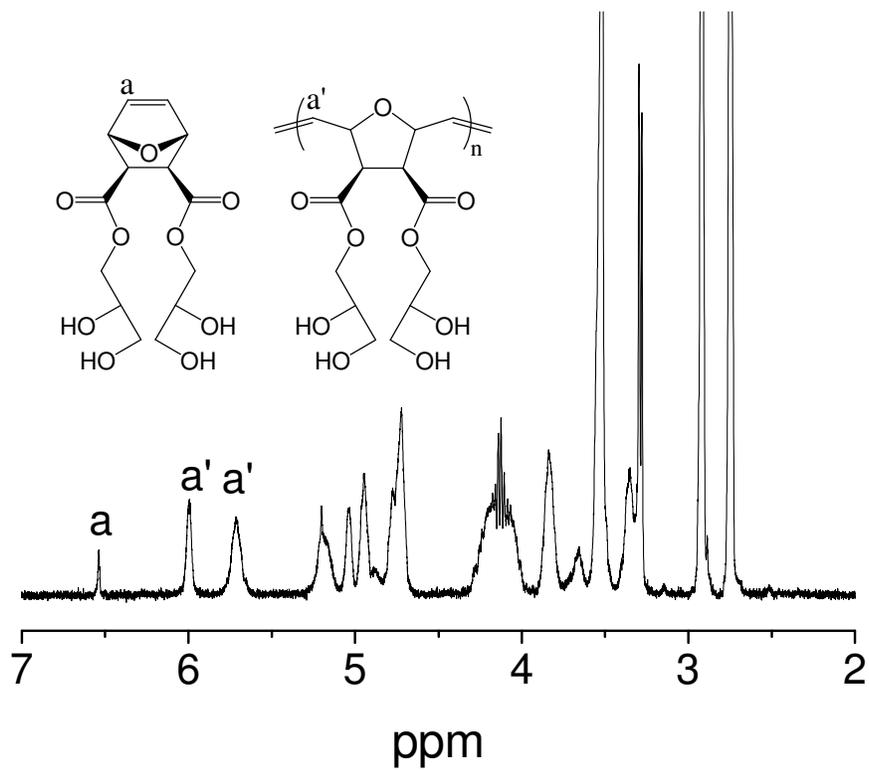

Figure S1. <sup>1</sup>H-NMR spectrum of the reaction mixture for the ROMP of **M4** after a reaction time of 12 h in DMF-d<sub>7</sub>; [M4]<sub>0</sub>/[G3]<sub>0</sub> = 200:1.

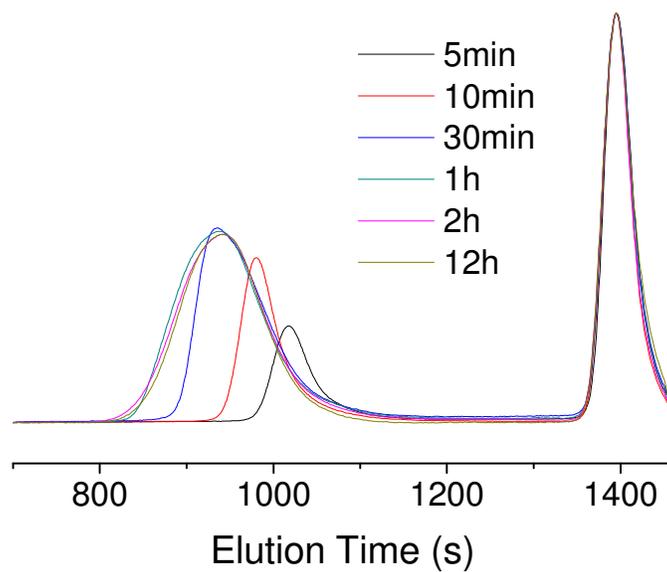

Figure S2. GPC traces of Poly-M4 from ROMP at various times throughout the reaction;

$[M4]_0 = 0.5$  M in DMF,  $[M4]_0/[G3]_0 = 400:1$ . DMF with 0.01 M LiBr was the eluent.

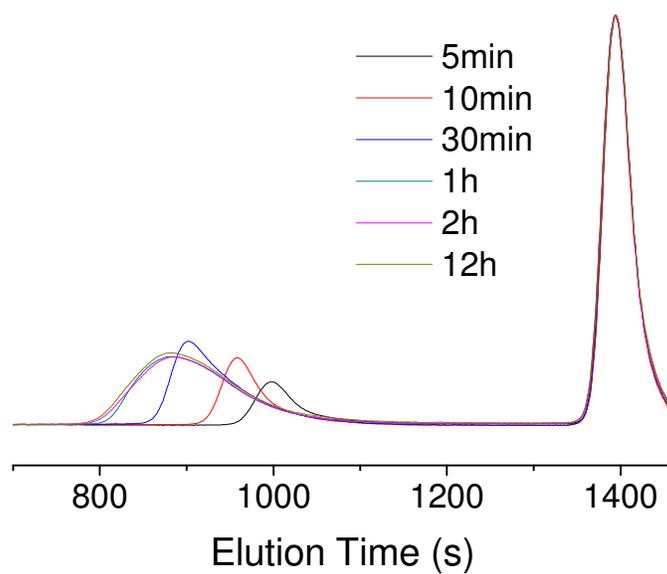

Figure S3. GPC traces of Poly-M4 from ROMP at various times throughout the reaction;

$[M4]_0 = 0.5$  M in DMF,  $[M4]_0/[G3]_0 = 800:1$ . DMF with 0.01 M LiBr was the eluent.

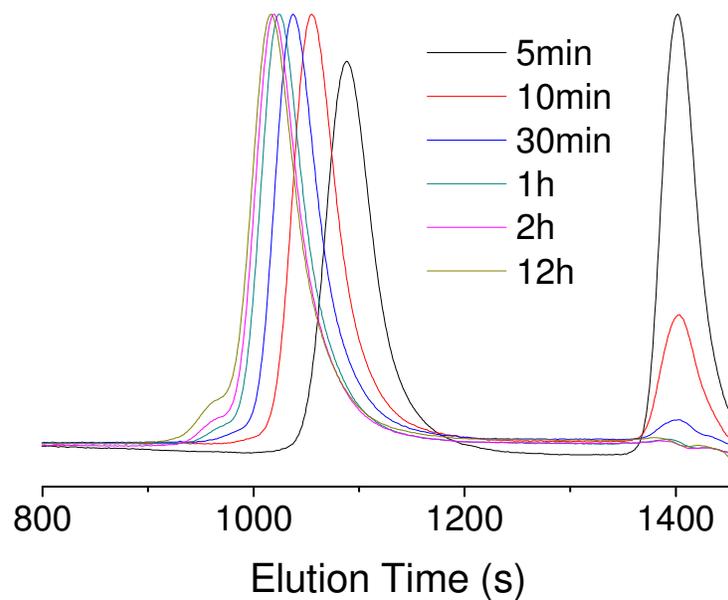

Figure S4. GPC traces of Poly-M4 from ROMP at various times throughout the reaction;

$[M4]_0 = 0.5$  M in DMF,  $[M4]_0/[G3]_0 = 100:1$ . DMF with 0.01 M LiBr was the eluent.

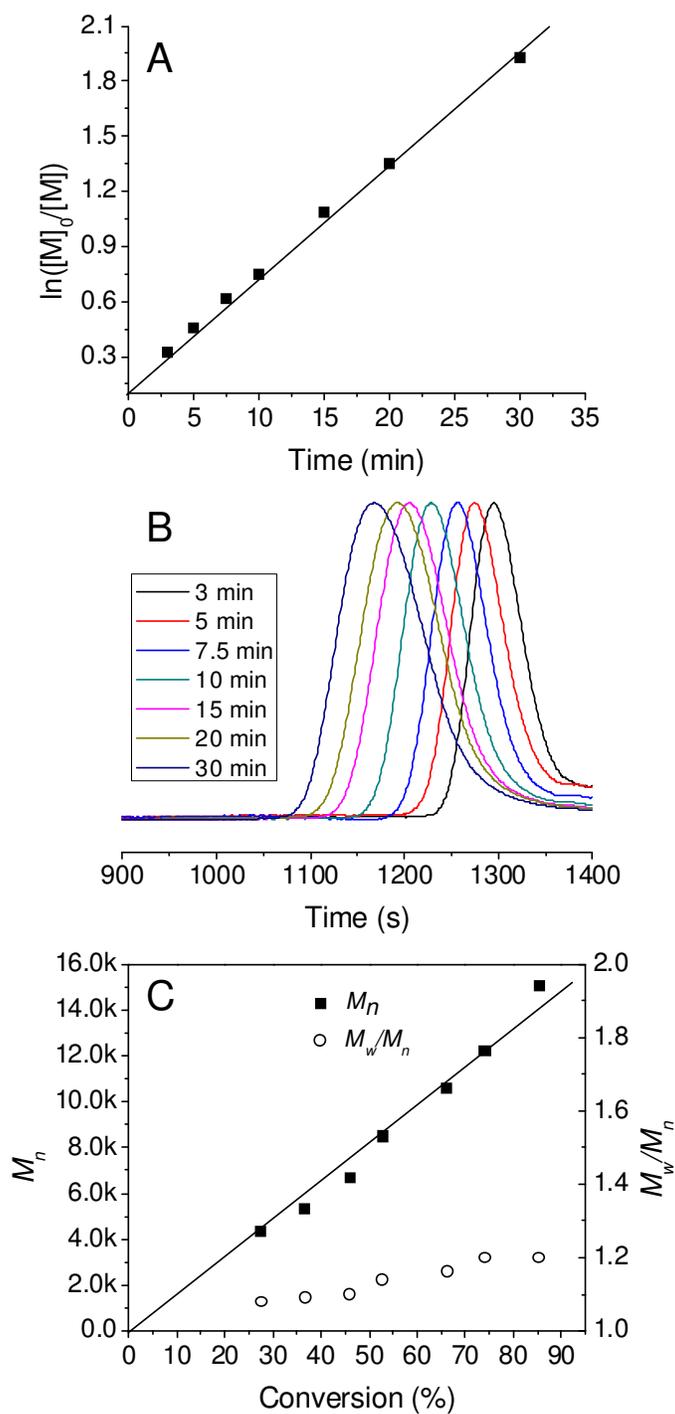

Figure S5. ROMP kinetics for polymerization of **M4** in air at room temperature,  $[M4]_0 = 0.125$  M in DMF,  $[M4]_0/[G3]_0 = 50:1$ .

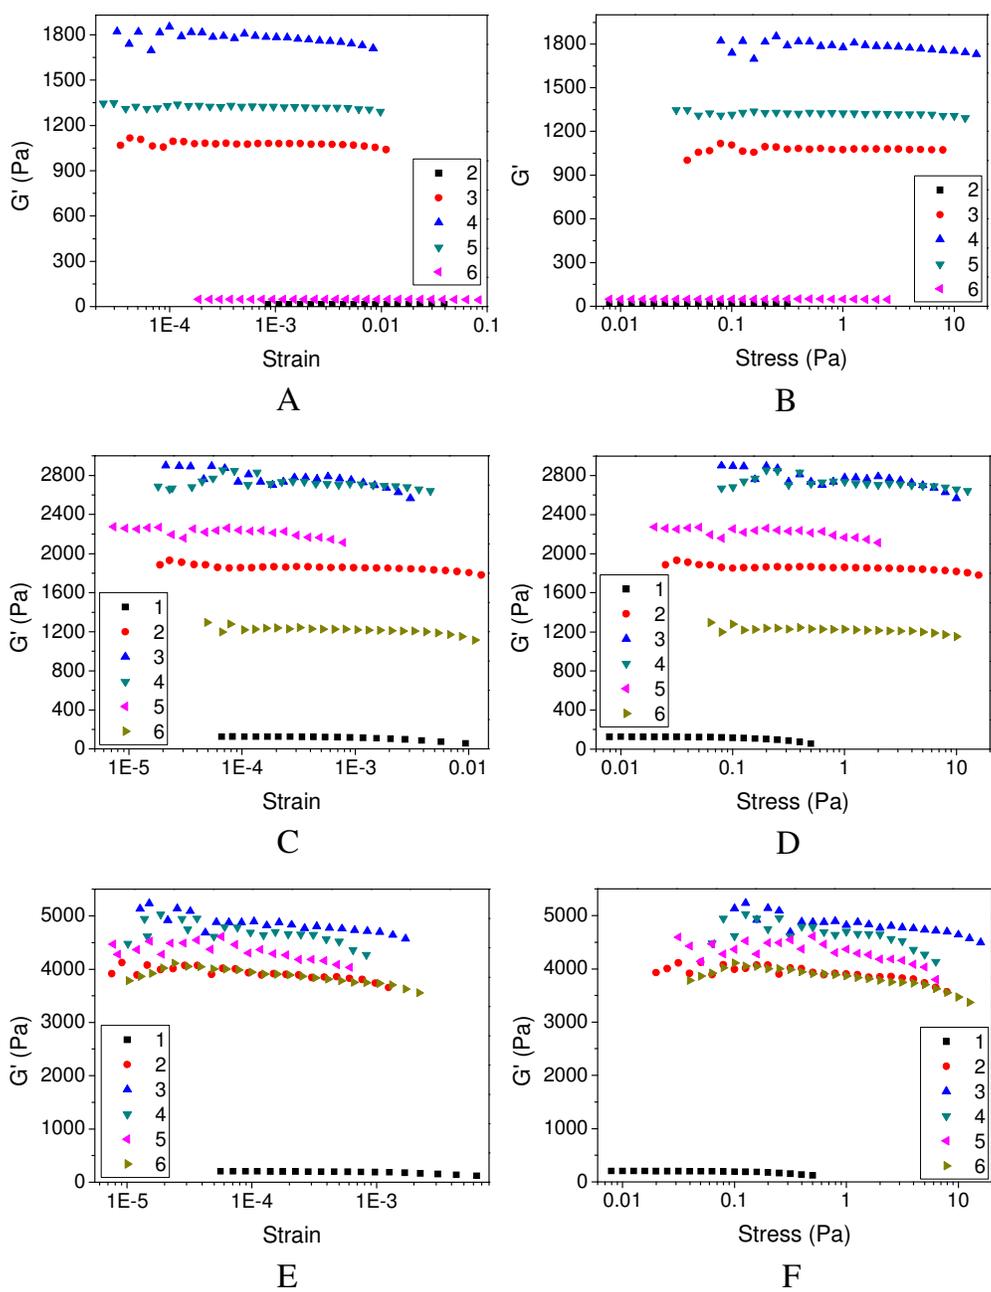

Figure S6. Elastic modulus ( $G'$ ) as a function of strain (A, C, E) and stress (B, D, F) for **C6** (A, B), **C7** (C, D), and **C8** (E, F) as the cross-linker, at a fixed frequency of 1.0 Hz, 25°C.  $[\text{Double bonds}]_0/[G3]_0$  equal to 50:1, 67:1, 100:1, 200:1, 400:1, and 800:1 for curves 1, 2, 3, 4, 5 and 6 respectively.

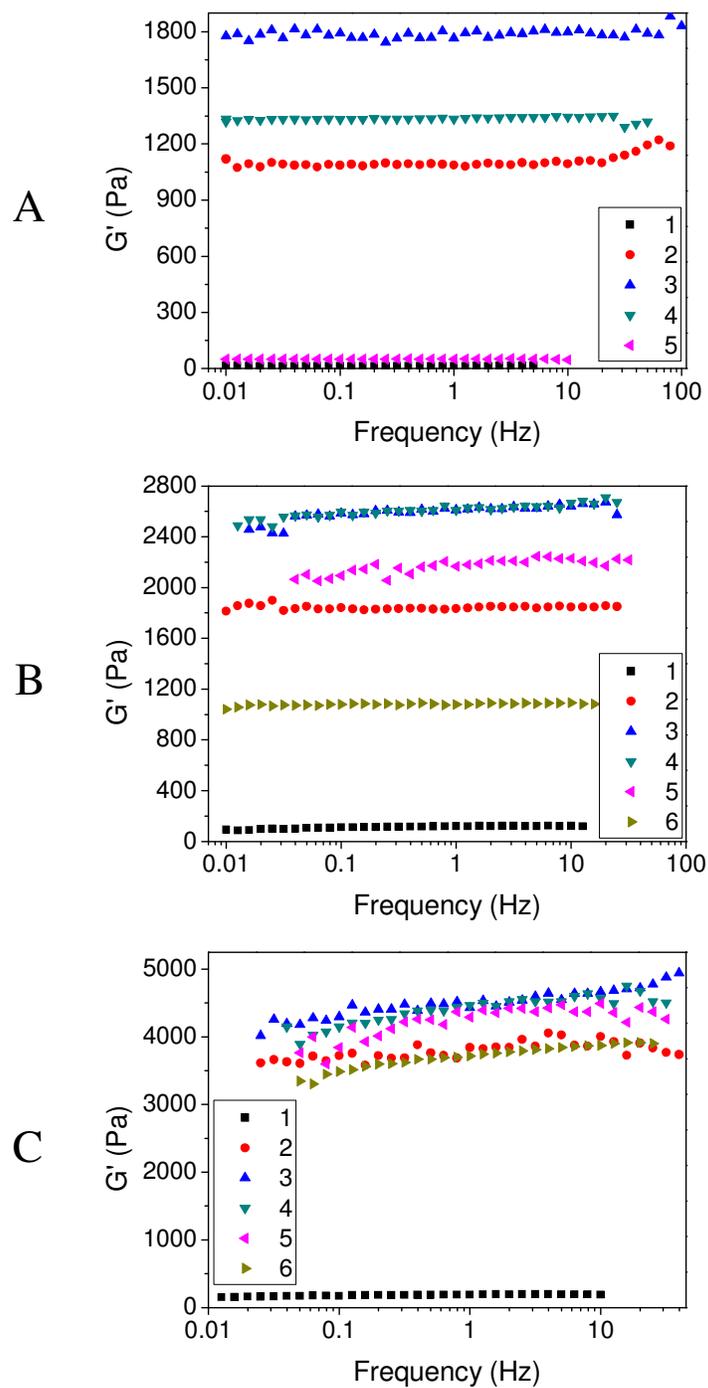

Figure S7. Elastic modulus ( $G'$ ) as a function frequency for **C6** (A), **C7** (B), and **C8** (C) as the cross-linker at 25°C.  $[\text{Double bonds}]_0/[\text{G3}]_0$  equal to 50:1, 67:1, 100:1, 200:1, 400:1, and 800:1 for curves 1, 2, 3, 4, 5 and 6 respectively.
