Figure S1. Rate of holographic response and equilibrium, numerical differentiation by finite differences; $d(\Delta\lambda)/dt = 0$ when equilibrium is reached after 9s for the gaseous hydrocarbon and after 120s for some alcohols tested in this study.

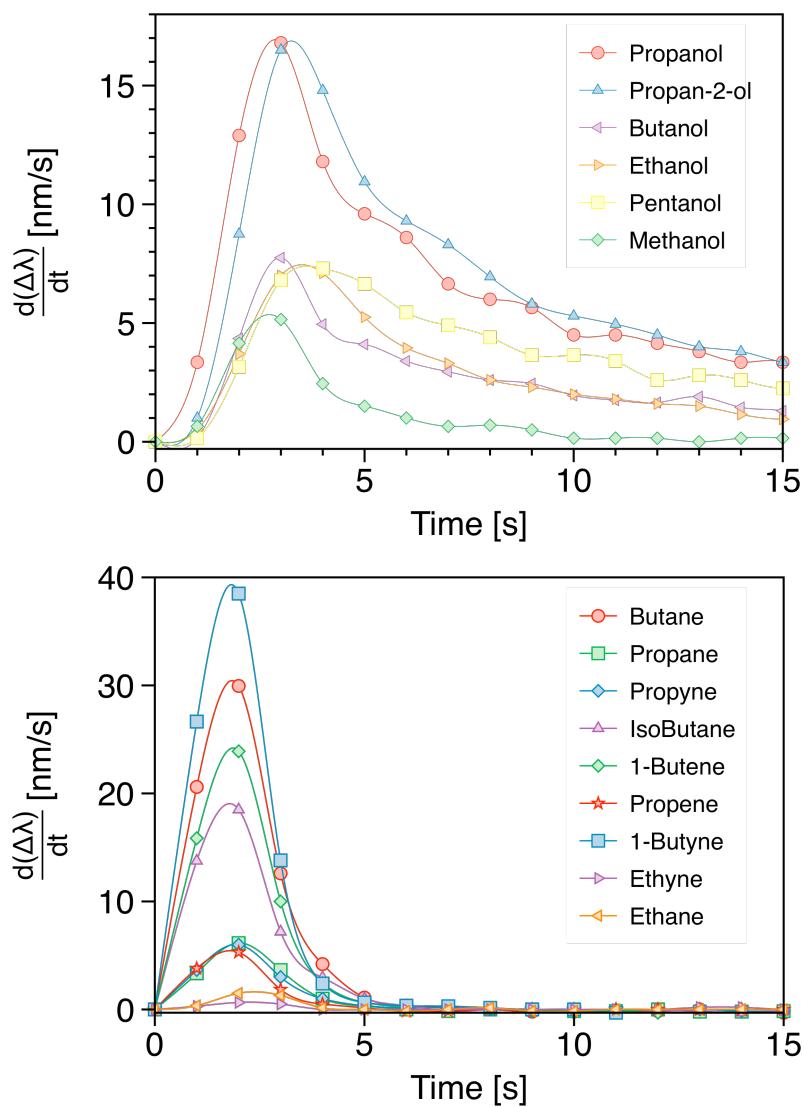

Figure S2. Blank response to atmospheric gases at different temperatures compared with response to water, 1-butanol, 1-butyne, 1-butene and n-butane at 22°C.
