

Figure S1. A magnified SEM image of smaller (2- μm) HAp/PLLA microspheres. The surface was uniformly coated with spherical HAp nanoparticles.

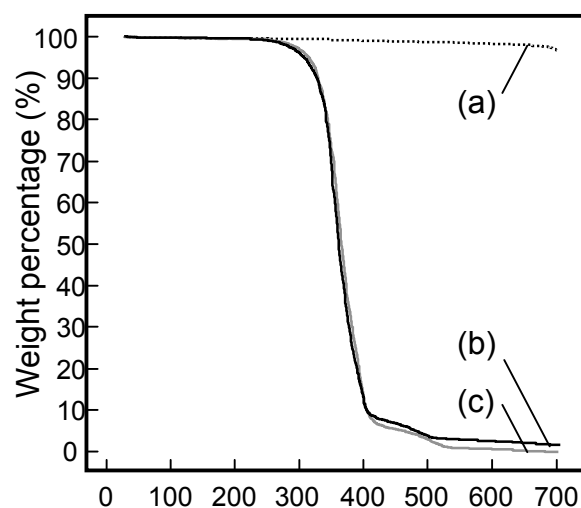

Figure S2. TG curves of (a) dried SHAp, (b) HAp/PLLA multihollow microspheres after washing and drying in vacuum, and (c) PLLA homopolymers (MW, 150,000 g/mol) measured at 10°C/min under N₂
