Fabrication of the OLED devices. OLED devices were fabricated with **2CN** as the dopant materials. An ITO-coated glass (20 Ω/sq) substrate was first cleaned using conventional procedures. After insertion into a fabrication chamber, the sample was exposed to an UV ozone treatment, and organic layers were deposited onto the ITO layer by thermal evaporation, and LiF and Al were deposited successively onto the underlying organic layers. The characteristics of each OLED device were measured using a photoresearch PR650 spectrometer and a KEITHLEY 306 source measure unit.
