

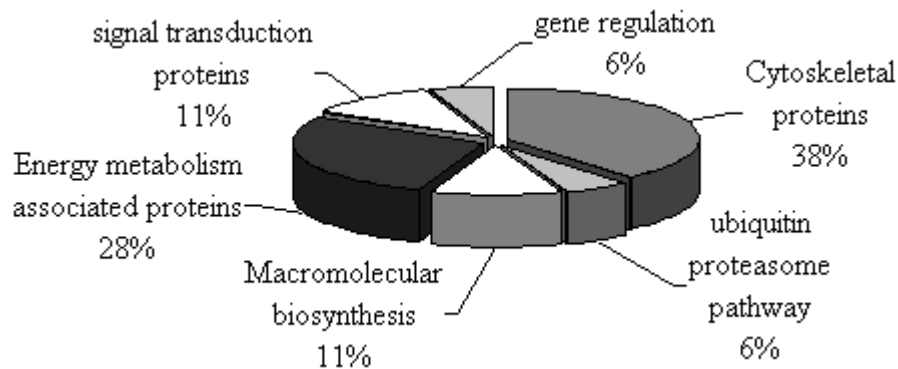

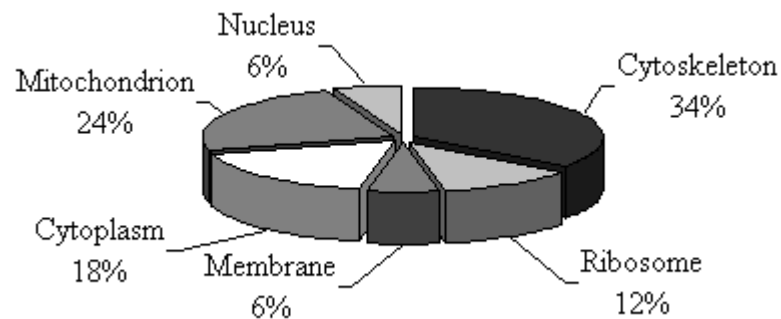

Figure S2. Classification of the differentially expressed proteins in PCV2-infected PK15 cells according to subcellular location and biological function. *A* and *C* show functional classification of the differentially expressed proteins in PCV2-infected PK15 cells. *B* and *D* indicate subcellular location of the differentially expressed proteins in PCV2-infected PK15 cells.

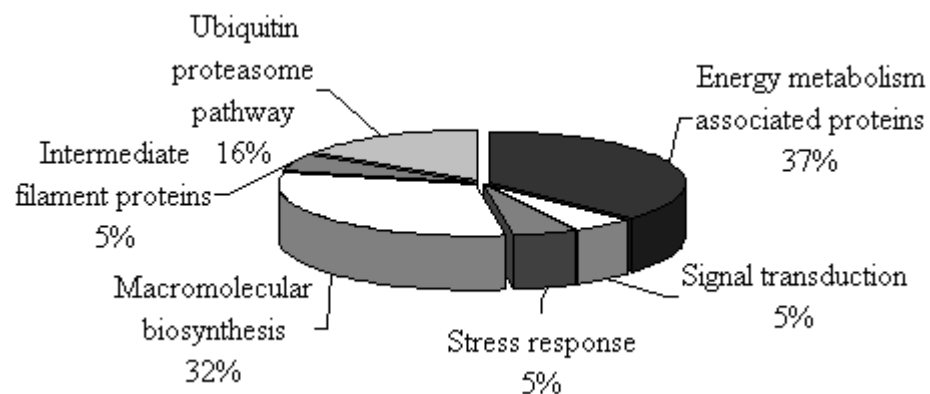

A. Functional classification of up-regulated protein spots

B. Subcellular location of up-regulated protein spots

C. Functional classification of down-regulated protein spots

D. Subcellular location of down-regulated protein spots
