Supporting Information

Table S1 Linear signal responses of o-anisidine deposited on the cotton textile surface

Concentration of aromatic amine on surface (fg/mm ²)	Absolute signal intensity of the protonated aromatic amine (m/z124)							Mean value of the signal intensity	Relative standard deviation (%)
	20.0	1180	1220	1060	1150	1030	1110		
200.0	2130	2290	1910	2220	2090	2020	2110	136.7	6.5
2000.0	3310	3290	3180	3140	3090	3400	3235	117.4	3.6
20000.0	4120	4260	4030	3720	3910	3860	3983	193.6	4.9
200000.0	5180	4970	5050	4820	4710	5100	4972	177.5	3.6
2000000.0	6560	6370	6450	6220	6110	6500	6368	172.9	2.7

The LOD was calculated using the equation: $LOD=3\sigma c/S$; where σ was the standard deviation of the 6 measurements performed on the blank sample; c was the minimal concentration of a standard solution used to obtain the calibration curve; S was the mean value of the signal of analytes at the concentration c . In this case,

$$LOD = \frac{3\sigma c}{S} = \frac{3 \times 66.0 \times 20}{1125} = 3.5 \text{ fg / mm}^2.$$

Table S2 Linear signal responses of 4-methoxy-1, 3-phenylene diamine deposited on the cotton textile surface

Concentration of aromatic amine on surface (fg/mm ²)	Absolute signal intensity of the protonated aromatic amine (m/z139)							Mean value of the signal intensity	Relative standard deviation (%)
20.0	1830	1760	1970	1820	1840	1910	1855	74.0	4.0
200.0	3380	3300	3290	3420	3190	3070	3275	128.2	3.9
2000.0	4860	4720	4830	4610	4790	4950	4793	117.8	2.5
