

Supplementary data

Table 1: Cochlear proteins detected in three rat strains.

Out of the 725 antibodies investigated 639, 649 and 706 were detected in the cochlear tissue of Wistar, Sprague-Dawley and Fischer-344 rats respectively. The fold expressions given are relative to actin. X indicates that the proteins were not detected in the specific strain while trace indicates that the detection range was between 0.01 – 0.04.

Protein Name	ID (Sigma)	Fold expression relative to actin		
		Wistar	Sprague-Dawley	Fischer 344
