## General:

${ }^{1} \mathrm{H}$ NMR and ${ }^{13} \mathrm{C}$ NMR spectra were recorded, as solutions in deuteriochloroform $\left(\mathrm{CDCl}_{3}\right)$ unless otherwise indicated, at 400 MHz and 100 MHz , respectively. ${ }^{13} \mathrm{C}$ multiplicities were determined with the aid of a JVERT pulse sequence, differentiating the signals for methyl and methine carbons as " d " from methylene and quaternary carbons as " u ". The infrared (IR) spectra were determined as neat oils. Rf values indicated refer to thin layer chromatography (TLC) on $2.5 \times 10 \mathrm{~cm}, 250 \mu \mathrm{~m}$ analytical plates coated with silica gel GF, unless otherwise noted, and developed in the solvent system indicated. All glassware was oven dried and rinsed with dry solvent before use. THF and diethyl ether were distilled from sodium metal/benzophenone ketyl under dry nitrogen. MTBE is methyl tert-butyl ether and PE is petroleum ether. All reactions were conducted under $\mathrm{N}_{2}$ and stirred magnetically.

1-(4-Methoxyphenyl)oct-7-en-3-ol (7). To a stirred solution of p-methoxy benzyl chloride ( $3.28 \mathrm{~g}, 20.9 \mathrm{mmol}$ ) in dry THF ( 20 mL ), was dropwise added allylmagnesium chloride ( 40 mmol ) in THF over 5 min at $0^{\circ} \mathrm{C}$. After stirring for 5 h at $60^{\circ} \mathrm{C}$, the reaction mixture was quenched with methanol ( 3 mL ). The mixture was partitioned between $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ and, sequentially, water and brine. The combined organic extracts were dried $\left(\mathrm{Na}_{2} \mathrm{SO}_{4}\right)$ and concentrated to give crude alkene ( 3.45 g ).

To a stirred solution of the above crude alkene in dry $\mathrm{CH}_{2} \mathrm{Cl}_{2}(50 \mathrm{~mL})$ was added mCPBA $(6.27 \mathrm{~g}, 27.9 \mathrm{mmol})$ at rt . After stirring overnight at rt , the reaction mixture was diluted with $\mathrm{CH}_{2} \mathrm{Cl}_{2}(100 \mathrm{~mL})$, washed with saturated aqueous $\mathrm{NaHSO}_{3}$ and then with 1 M NaOH . The organic extracts were dried $\left(\mathrm{Na}_{2} \mathrm{SO}_{4}\right)$ and concentrated to afford crude epoxide ( 3.41 g ).

To a stirred solution of 4-butenyl magnesium bromide \{freshly prepared with $\mathrm{Mg}(2.1 \mathrm{~g}$, $87.5 \mathrm{mmol})$, 4-bromo-1-butene $(7.15 \mathrm{~g}, 53.0 \mathrm{mmol})$ and $\mathrm{I}_{2}$ in dry THF $\left.(30 \mathrm{~mL})\right\}$ in dry THF was added $\mathrm{CuI}(672 \mathrm{mg}, 3.53 \mathrm{mmol})$ at $0^{\circ} \mathrm{C}$. It was stirred for 5 min at $0^{\circ} \mathrm{C}$ and then the solution of the above crude epoxide in THF ( 5 mL ) was added. After stirring overnight at rt , the reaction mixture was quenched with saturated aqueous $\mathrm{NH}_{4} \mathrm{Cl}(10$
mL ) and then partitioned between $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ and, sequentially, water and brine. The combined organic extracts were dried $\left(\mathrm{Na}_{2} \mathrm{SO}_{4}\right)$ and concentrated. The residue was chromatographed to yield alcohol $7(3.31 \mathrm{~g}, 67 \%$ yield from p-methoxy benzyl chloride) as a colorless oil: $\operatorname{TLC} R_{f}(20 \% \mathrm{MTBE} / \mathrm{PE})=0.33 ; \operatorname{IR}\left(\mathrm{cm}^{-1}\right) 3380,2929,1510,1240$, $1034 ;{ }^{1} \mathrm{H}$ NMR $\delta 7.10(\mathrm{~d}, J=8.6 \mathrm{~Hz}, 2 \mathrm{H}), 6.80(\mathrm{~d}, J=8.6 \mathrm{~Hz}, 2 \mathrm{H}), 5.75-5.85(\mathrm{~m} \mathrm{1H})$, 4.90-5.05 (q, 2H), $3.75(\mathrm{~s}, 3 \mathrm{H}), 3.60(\mathrm{~s}, 1 \mathrm{H}), 2.70(\mathrm{~m}, 1 \mathrm{H}), 2.60(\mathrm{~m}, 1 \mathrm{H}), 2.05(\mathrm{~m}, 2 \mathrm{H})$, $1.70(\mathrm{~m}, 2 \mathrm{H}), 1.40-1.60(\mathrm{~m}, 5 \mathrm{H}) ;{ }^{13} \mathrm{C}$ NMR $\delta$ u 157.8, 134.2, 114.7, 39.4, 37.0, 33.7, 31.2, 24.9; d 138.7, 129.3, 113.9, 71.2, 55.3; HRMS calcd for $\mathrm{C}_{15} \mathrm{H}_{22} \mathrm{O}_{2}\left(\mathrm{M}^{+}\right)$234.1620, obsd 234.1618.

After cooling to rt , the reaction mixture was partitioned between $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ and, sequentially, water and brine.
