## 1-HPLC Purity Analysis

## 1- HPLC Purity Analysis: HPLC Purity Analysis

HPLC purity was determined to be $>95 \%$ for all final products by the following two HPCL conditions (See Table below); 1) HPLC method A utilized a Phenominex Luna C18 column ( $6 \times 75 \mathrm{~mm}, 3 \mu \mathrm{M}$ particle size), with a gradient of $95 \%$ water/0.05\% TFA to $5 \%$ acetonitrile/ $0.05 \%$ TFA at a flow rate of $1.5 \mathrm{~mL} / \mathrm{min}$ over a total run time of 7 min. with UV monitoring at 220 nm and 254 nm . 2) HPLC method B utilized a Zorbax Eclipse XDB-C8 column ( $6 \times 50 \mathrm{~mm}, 3.5 \mu \mathrm{M}$ particle size), with a gradient of $95 \%$ water/ $0.05 \%$ TFA to $5 \%$ acetonitrile $/ 0.05 \%$ TFA at a flow rate of $1.5 \mathrm{~mL} / \mathrm{min}$ over a total run time of 5 min . with UV monitoring at 225 nm and 254 nm .
