Supporting Information

## 1. X-ray structure of $[2]\left(\mathrm{PF}_{6}\right)_{2} \cdot 6 \mathrm{CH}_{3} \mathrm{CN}$

"Platinum-Ruthenium Dinuclear Complex Bridged by Bis(terpyridyl)xanthene" by Rei Okamura, Tohru Wada, Katsuji Aikawa, Toshi Nagata, and Koji Tanaka

## Supporting Information

X-ray Structure of $\left[\left(\mathrm{PtCl}_{2}\right)_{2}(\right.$ btpyxa $\left.)\right]\left(\mathrm{PF}_{6}\right)_{2} \cdot \mathbf{6} \mathrm{CH}_{3} \mathrm{CN}\left([2]\left(\mathrm{PF}_{6}\right)_{2} \cdot \mathbf{6 C H} \mathbf{3} \mathbf{C N}\right)$.
Yellow crystals of $[2]\left(\mathrm{PF}_{6}\right)_{2} \cdot 6 \mathrm{CH}_{3} \mathrm{CN}$ were obtained by vapor diffusion of diethyl ether into an acetonitrile solution of the complex. Crystal data of $[2]\left(\mathrm{PF}_{6}\right)_{2} \cdot 6 \mathrm{CH}_{3} \mathrm{CN}$ are summarized in Table S1.

Data for 4$]\left(\mathrm{PF}_{6}\right)_{2} \cdot 6 \mathrm{CH}_{3} \mathrm{CN}$ were collected on a Rigaku/MSC Mercury CCD difractometer using graphite-monochromated Mo K $\alpha$ radiation $(\lambda=0.71070 \AA$ ) at 173 K , and processed using Crystal Clear. ${ }^{1}$ The structure was solved by heavy-atom Patterson methods (Dirdif 94 Patty) ${ }^{2}$ and refined by full-matrix least square refinement on $\mathrm{F}^{2}$. All non-hydrogen atoms except for C 19 in terpyridyl moiety were refined anisotopically. All hydrogen atoms were located on the calculated positions and not refined. All calculations were performed using the teXsan crystallographic software package. ${ }^{3}$
