

Supplementary Material for
AN UNUSUAL ZWITTERIONIC, DIRADICAL INTERMEDIATE IN
PHOTOCHEMICAL ELECTRON-TRANSFER SUBSTITUTION REACTIONS

John B. Miller,^{*,a} Jeremy Breeding, and Thomas J. Smith^b

Supplementary Figure 1. Spectral subtraction of the ESR signals due to uncomplexed reactants from the spectrum of the mixture. Measured 1-chloroadamantane and *tert*-butylamine spectra were individually scaled so that the difference spectrum was at baseline below 314 mT and above 330 mT.

Supplementary Figure 2. Isosurfaces of the frontier molecular orbitals for complex **1** (left) and **2** (right).
