

Supporting Information for

Facile Ring Opening of Iron(III) and Iron (II) Complexes of *meso*-Amino-octaethylporphyrin by Dioxygen.

Sankar Prasad Rath, Heather Kalish, Lechoslaw Latos-Grazynski, Marilyn M. Olmstead, and

Alan L. Balch

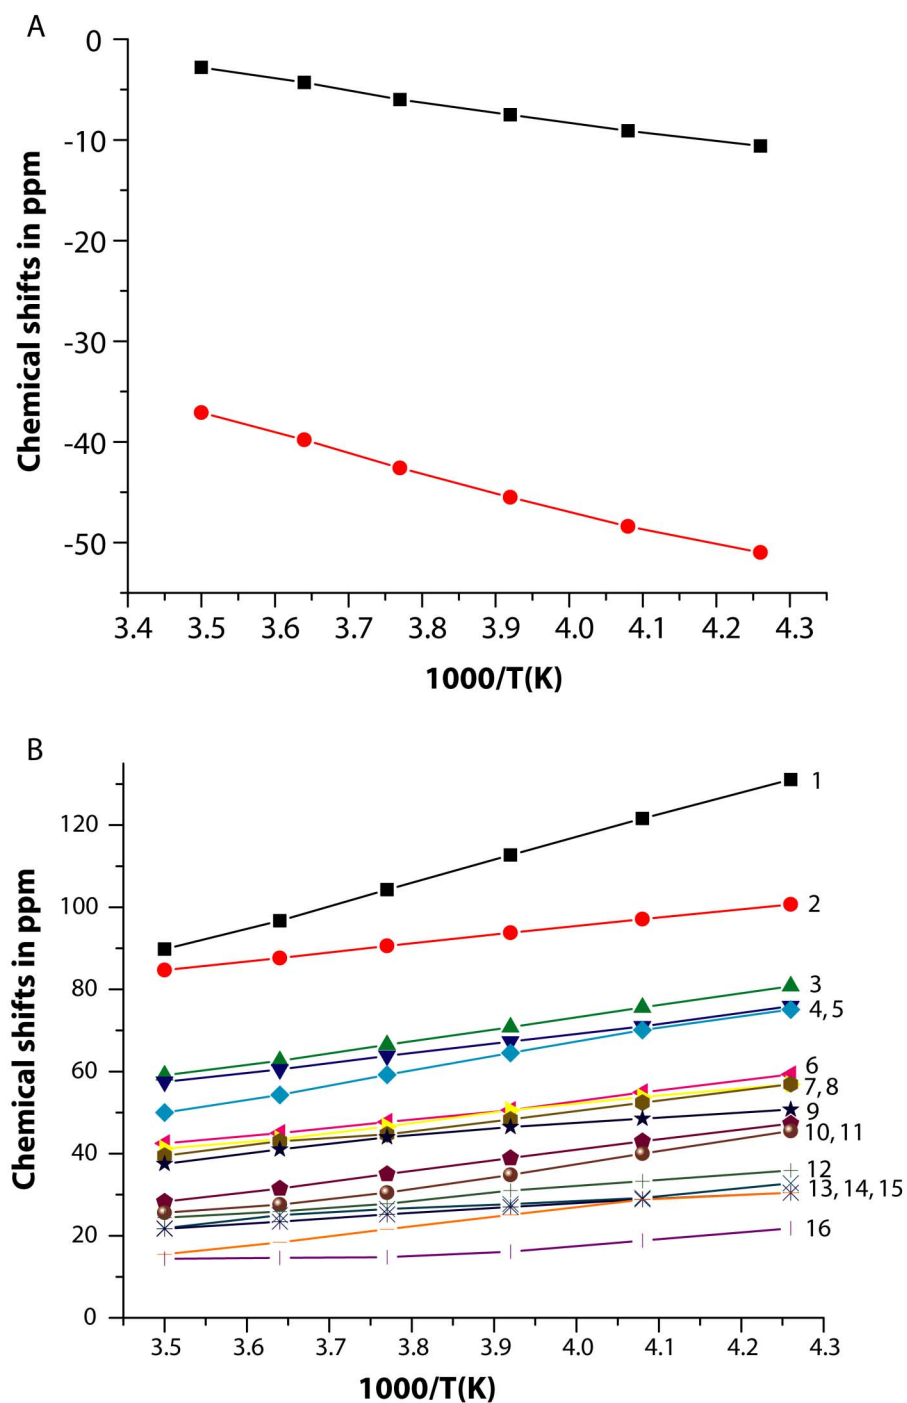

Figure S1. A plot of chemical shift versus $1/T$ for the open-chain tetrapyrrole complex **3**. Meso resonances are plotted in the top part while the methylene resonances are shown in the lower portion.
