## Synthesis and Characterization of Additional Dithioarylarsines.

4-(1,3,2-dithiaarsolan-2-yl)aniline [ $\mathrm{NH}_{2} \mathrm{C}_{6} \mathrm{H}_{4} \mathrm{As}\left(\mathrm{SCH}_{2} \mathrm{CH}_{2} \mathrm{~S}\right)$ ], S4. p-Arsanilic acid (109.5 $\mathrm{mg}, 0.504 \mathrm{mmol}$ ) was dissolved in ethanol $(95 \%, 20 \mathrm{~mL})$ in a 100 mL round bottom flask equipped with a stir bar, and heated to $55^{\circ} \mathrm{C}$ in a water bath. Aqueous ammonium mercaptoacetate ( $5.5 \mathrm{M}, 458 \mu \mathrm{~L}, 2.52 \mathrm{mmol}$ ) was added, and heating continued while stirring vigorously. After 60 minutes, the flask was removed from heat and 1,2 -ethane dithiol ( $47.5 \mathrm{mg}, 42.4 \mu \mathrm{~L}, 0.504 \mathrm{mmol}$ ) was added. The resultant reaction mixture was stirred for 30 minutes, at which time water ( $\sim 50 \mathrm{~mL}$ ) was added until the reaction turned milky white. After standing overnight in the freezer $\left(-15^{\circ} \mathrm{C}\right)$, crystalline product was isolated by vacuum filtration, washed with water, and dried in vacuo. X-ray quality crystals were obtained by slow evaporation from methanol.
