General Information

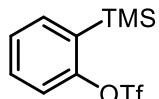

All commercial reagents and solvents were used as received. Flash column chromatography was performed using Silicycle silica gel (55–65 Å pore diameter). Thin-layer chromatography was performed on Sorbent Technologies silica plates (250 µm thickness). Proton nuclear magnetic resonance spectroscopy (¹H NMR) and Carbon nuclear magnetic resonance spectroscopy (¹³C NMR) spectra were recorded on a Bruker DMX 500 ¹H NMR. High-resolution mass spectra were obtained by Dr. Rakesh Kohli at the University of Pennsylvania's Mass Spectrometry Service Center on a Waters LC-TOF mass spectrometer (model LCT-XE Premier) using electrospray ionization. X-ray diffraction data obtained and solved by Dr. Patrick Carroll at the University of Pennsylvania. High performance liquid chromatography analysis was performed using a Jasco HPLC instrument equipped with a Phenomenex column (Luna 5u C18(2) 100A; 250 × 4.60 mm, 5 µm).
