## Characterization

High Resolution Scanning Electron Microscopy (HRSEM)

Figure S1. Different steps for structuring the YSZ- and $\mathrm{Al}_{2} \mathrm{O}_{3}$-supported Pt films by a subtractive lithographic technique. (a) after the ablation and sintering stage the Pt film showed a smooth and dense surface, but the edges of the film had frayed irregular contours, (b-c) after the removal of the resist the Pt edges presented a sharp structure, although the Pt surface had
been roughened due to the etching and removal processes (HRSEM micrographs shown here are from sample 16 PtYSZ ).

Atomic Force Microscopy (AFM)

Figure S2. (a) AFM image of a hole and (b) of the base of a hole of sample 1PtYSZ. The AFM topographic image show a Pt wall exhibiting imperfections (a). Of particular interest are nanoscale features approximately 5 nm in height and tens of nanometres laterally (b). These features are most likely irregularities on the YSZ surface due to ion beam bombardment during the etching process.

X-ray Diffraction (XRD)

Figure S3. XRD showing that single crystalline (111) orientation dominates the Pt structure for sample 16PtYSZ. A low intensity peak and shoulder to the left of the $\operatorname{Pt}(111)$ peak can be attributed to trace amounts of material with argon implanted into the $\operatorname{Pt}(111)$ plane. Similar XRD patterns were obtained for all YSZ- and $\mathrm{Al}_{2} \mathrm{O}_{3}$-supported samples.

Arrhenius plot

Figure S4. Figure 4 with the lines whose slopes were used to calculate activation energies for the four $\mathrm{Pt} / \mathrm{YSZ}$ samples.

Table S1. Reported activation energies $\left(\mathrm{E}_{\mathrm{a}}\right)$ for the CO oxidation over supported and unsupported Pt catalysts.

| Catalyst | $\mathbf{T}(\mathbf{K})$ | $\mathbf{E a}_{\mathbf{a}}\left(\mathbf{k J} \mathbf{~ m o l}^{\mathbf{- 1}}\right)$ | Ref. |
| :---: | :---: | :---: | :---: |
| $\mathrm{Pt}(111)$ | $323-430$ | $35-70$ | 1 |
| $\mathrm{Pt}(110)$ | $550-610$ | $110 \pm 10$ | 2 |
| $\mathrm{Pt}(100)$ | $<400$ | 54 | 3 |
| $\mathrm{Pt}(100)$ | $500-725$ | 137 | 3 |
| $\mathrm{Pt} / \mathrm{Al}_{2} \mathrm{O}_{3}{ }^{\mathrm{a}}$ | $300-800$ | $30-125$ | 4 |
| $\mathrm{Pt} / \mathrm{SiO}_{2}$ | $400-450$ | 103 | 3 |
| $\mathrm{Pt} / \mathrm{SiO}_{2}$ | $520-590$ | 94 | 5 |
| $\mathrm{Pt} / \mathrm{SiO}_{2}$ | $500-550$ | 98 | 5 |
| $\mathrm{Pt} / \mathrm{SiO}_{2}$ | $570-660$ | $110 \pm 10$ | 2 |
| $1 \mathrm{PtYSZ}^{523-583}$ | $135 \pm 5$ | this work |  |
| 4 PtYSZ | $523-583$ | $92 \pm 6$ | this work |
| 16 PtYSZ | $523-563$ | $94 \pm 8$ | this work |
| 400 PtYSZ | $462-488$ | $250 \pm 40$ | this work |
| $\mathrm{Pt} / \mathrm{CeO}_{2}$ | $420-440$ | 63 | 5 |
| $\mathrm{Pt} / \mathrm{CeO}_{2}$ | $410-440$ | 64 | 5 |
| $\mathrm{Pt} / \mathrm{NiO}^{2}$ | $430-490$ | 96 | 5 |

| $\mathrm{Pt} / \mathrm{MnO}_{2}$ | $430-510$ | 66 | 5 |
| :--- | :--- | :--- | :--- |

## Experimental

All experiments reported in the manuscript were repeated twice to investigate reproducibility. The measured rates of $\mathrm{CO}_{2}$ production did not vary more than $15 \%$ in all cases during reproducibility experiments.
