

Supplemental Material

A. Fourier transformed (a) and k^3 -weighted W L_{III}-edge EXAFS function ($k^3 \cdot \chi(k)$) (b) of the Ni-WO₃/Al₂O₃-F catalyst sulfided at 400°C. Measured data — and curve fitting results ---.

B. Fourier transformed (a) and k^3 -weighted W L_{III}-edge EXAFS function ($k^3 \cdot \chi(k)$) (b) of the Ni-ATT/Al₂O₃ catalyst sulfided at 400°C. Measured data — and curve fitting results ---.

C. Fourier transformed (a) and k^3 -weighted W L_{III}-edge EXAFS function ($k^3 \cdot \chi(k)$) (b) of the Ni-ATT/Al₂O₃-F catalyst sulfided at 400°C. Measured data — and curve fitting results ---.

D. Fourier transformed (a) and k^3 -weighted Ni K-edge EXAFS function ($k^3 \cdot \chi(k)$) (b) of the Ni-WO₃/Al₂O₃-F catalyst sulfided at 400°C. Measured data — and curve fitting results ---.

E. Fourier transformed (a) and k^3 -weighted Ni K-edge EXAFS function ($k^3 \cdot \chi(k)$) (b) of the Ni-ATT/Al₂O₃-F catalyst sulfided at 400°C. Measured data — and curve fitting results ---.

F. Fourier transformed (a) and k^3 - weighted W L_{III}-edge EXAFS function ($k^3 \cdot \chi(k)$) (b)
of the Ni-WO₃/Al₂O₃ (RT) catalyst sulfided at 400°C. Measured data ——— and
curve fitting results --- .
