St. Dev.	-	0.85	1.1	3.4	1.2	0.45

<sup>a</sup>Normalized with respect to m/z 221. <sup>b</sup>C<sub>7</sub>H<sub>21</sub>O<sub>2</sub>Si<sub>3</sub>. <sup>c</sup>C<sub>7</sub>H<sub>21</sub>O<sub>2</sub>Si<sub>2</sub><sup>29</sup>Si and C<sub>6</sub><sup>13</sup>CH<sub>21</sub>O<sub>2</sub>Si<sub>3</sub>. <sup>d</sup>C<sub>7</sub>H<sub>21</sub>O<sub>2</sub>Si<sub>2</sub><sup>30</sup>Si and C<sub>7</sub>H<sub>21</sub>O<sup>18</sup>OSi<sub>3</sub>. <sup>e</sup>C<sub>7</sub>H<sub>21</sub><sup>18</sup>O<sub>2</sub>Si<sub>3</sub>. <sup>f</sup>C<sub>7</sub>H<sub>21</sub><sup>18</sup>O<sub>2</sub>Si<sub>2</sub><sup>29</sup>Si and C<sub>6</sub><sup>13</sup>CH<sub>21</sub><sup>18</sup>O<sub>2</sub>Si<sub>3</sub>. <sup>g</sup>C<sub>7</sub>H<sub>21</sub><sup>18</sup>O<sub>2</sub>Si<sub>2</sub><sup>30</sup>Si.

The contribution to the relative abundance of m/z 223 due to the ion C<sub>7</sub>H<sub>21</sub>O<sub>2</sub>Si<sub>2</sub><sup>30</sup>Si can be calculated as follows:

$$A\%(C_7H_{21}O_2Si_2^{30}Si)/A\%(C_7H_{21}O_2Si_3) = A\%(C_7H_{21}^{18}O_2Si_2^{30}Si)/A\%(C_7H_{21}^{18}O_2Si_3)$$

rearranging and substituting the values reported in Table II:

$$A\%(C_7H_{21}O_2Si_2^{30}Si) = 12.1 \pm 0.5 \%$$

When this value is subtracted from the experimental one (A%(m/z 223)<sub>EXP</sub> = 21.0 ± 1.1 %), the contribution to A%(m/z 223)<sub>EXP</sub> due to the ion [C<sub>7</sub>H<sub>22</sub>O<sup>18</sup>OSi<sub>3</sub>]<sup>+</sup> can be obtained:

$$A\%(C_7H_{21}O^{18}OSi_3) = 9.1 \pm 1.2 \%$$

Since the major source of this ion is loss of H· from the molecular ion [(Me<sub>3</sub>SiO)(Me<sub>3</sub>Si<sup>18</sup>O)Si(H)Me]<sup>+</sup>, the corresponding neutral molecule is present in the reaction mixture. The ratio between the three isotopomeric products in the reaction mixture is:

$$(Me_3SiO)_2Si(H)Me : (Me_3SiO)(Me_3Si^{18}O)Si(H)Me : (Me_3Si^{18}O)_2Si(H)Me = \\ = 100 : 9.1 : 80$$

Therefore, the amount of the species having one <sup>16</sup>O and one <sup>18</sup>O, relative to the total amount of the three isotopomers, can be calculated to be 4.8 %

**Table 4. Oxygen concentration during the AIBN (0.026M) initiated autoxidation at 50 °C of (Me<sub>3</sub>Si)<sub>2</sub>Si(H)Me (0.3M) in benzene in the presence of  $\alpha$ -tocopherol ( $2 \times 10^{-4}$  M) (cf. Figure 2a)**
