bulk ^b		-69647.26	-2391. 90	-	-

^auni represents an isolated HMX molecule.

^bbulk represents the ideal HMX bulk crystal.

Table S2 Lattice parameters and calculated total energy of relaxed β -HMX slab

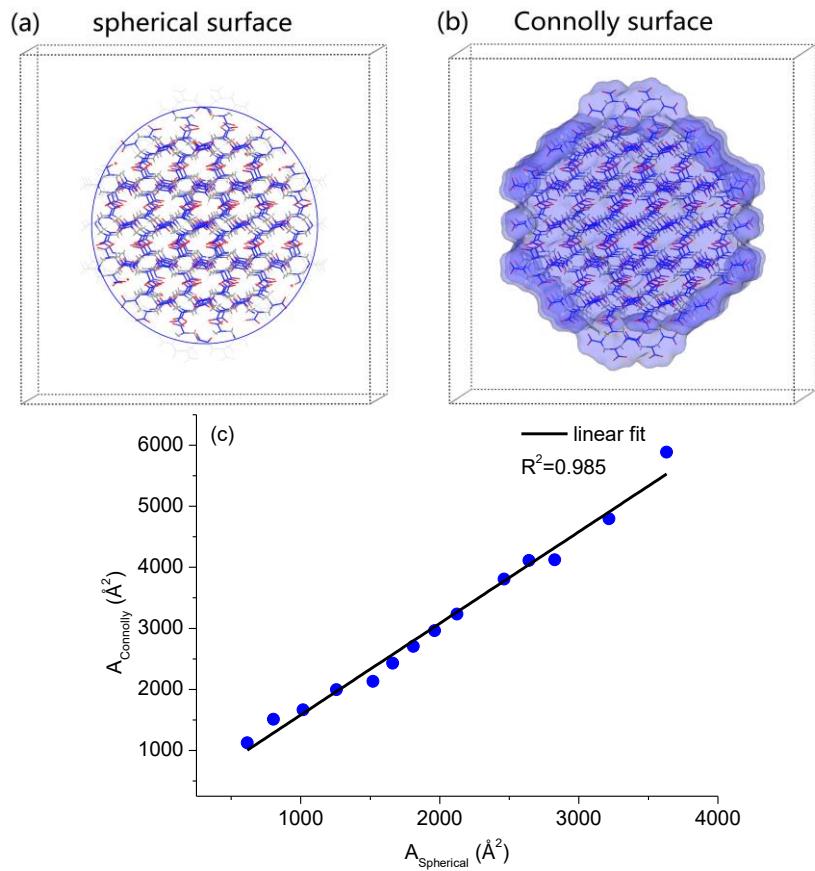

Fig. S1. An illustration of (a) the spherical surface and (b) the Connolly surface for evaluating the surface area of the HMX NPs. (c) The comparison of the calculated surface areas of the HMX NPs by the two methods. The Connolly surface is plotted with vDW scale factor of 1.0 and Connolly radius of 2.0 Å.

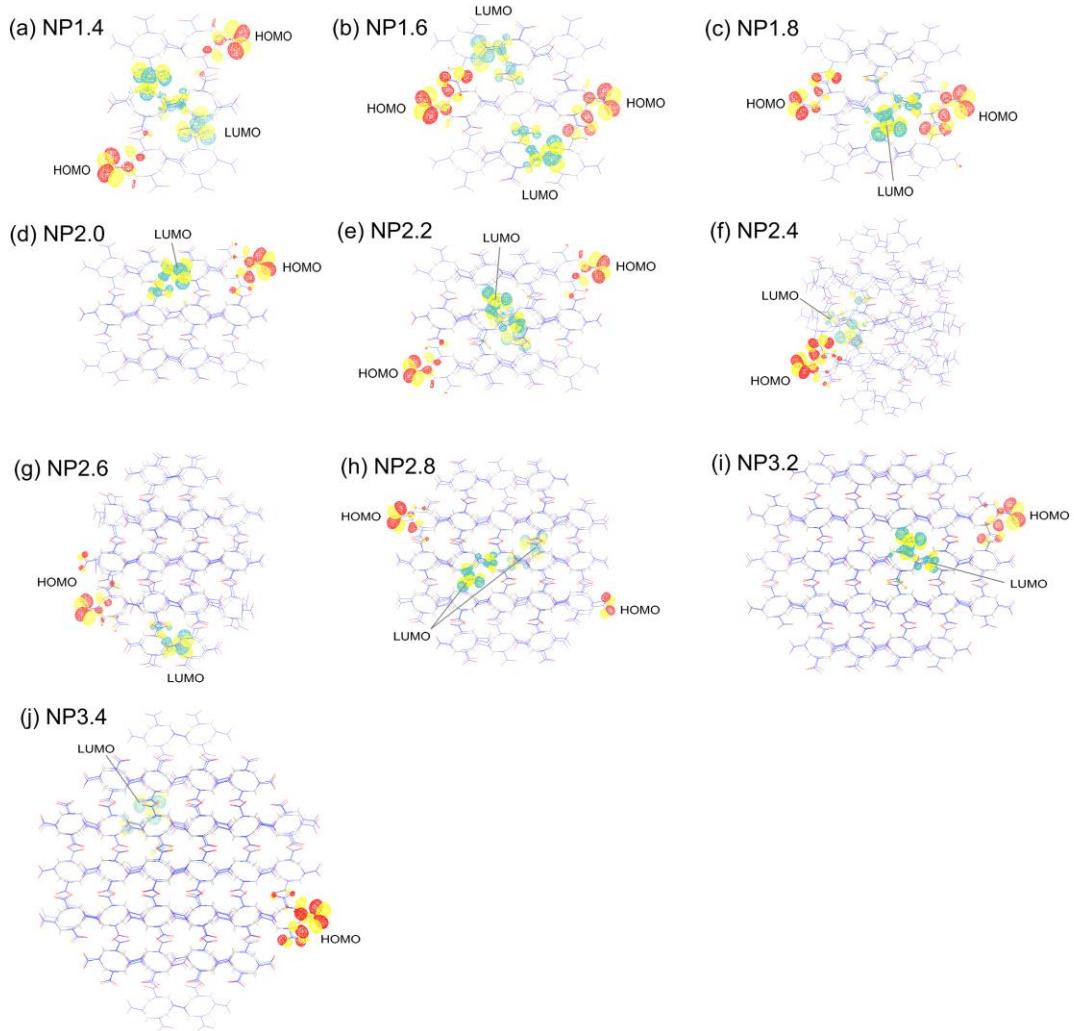

Fig. S2. Surface states in the spherical HMX NPs with sizes in the range 1.4-3.4 nm.

The isosurfaces are plotted with isovalue of 0.02.
