Table of Contents

- S2 Figure S1. Crystal packing in the crystal structure of 16j bound to PDE1B
- S3 Figure S2. Crystal packing in the crystal structure of 16d bound to PDE10A
- S4 Table S1. X-ray data processing and structure refinement statistics
- S5 Table S2. Off-target selectivity profile for **16k**

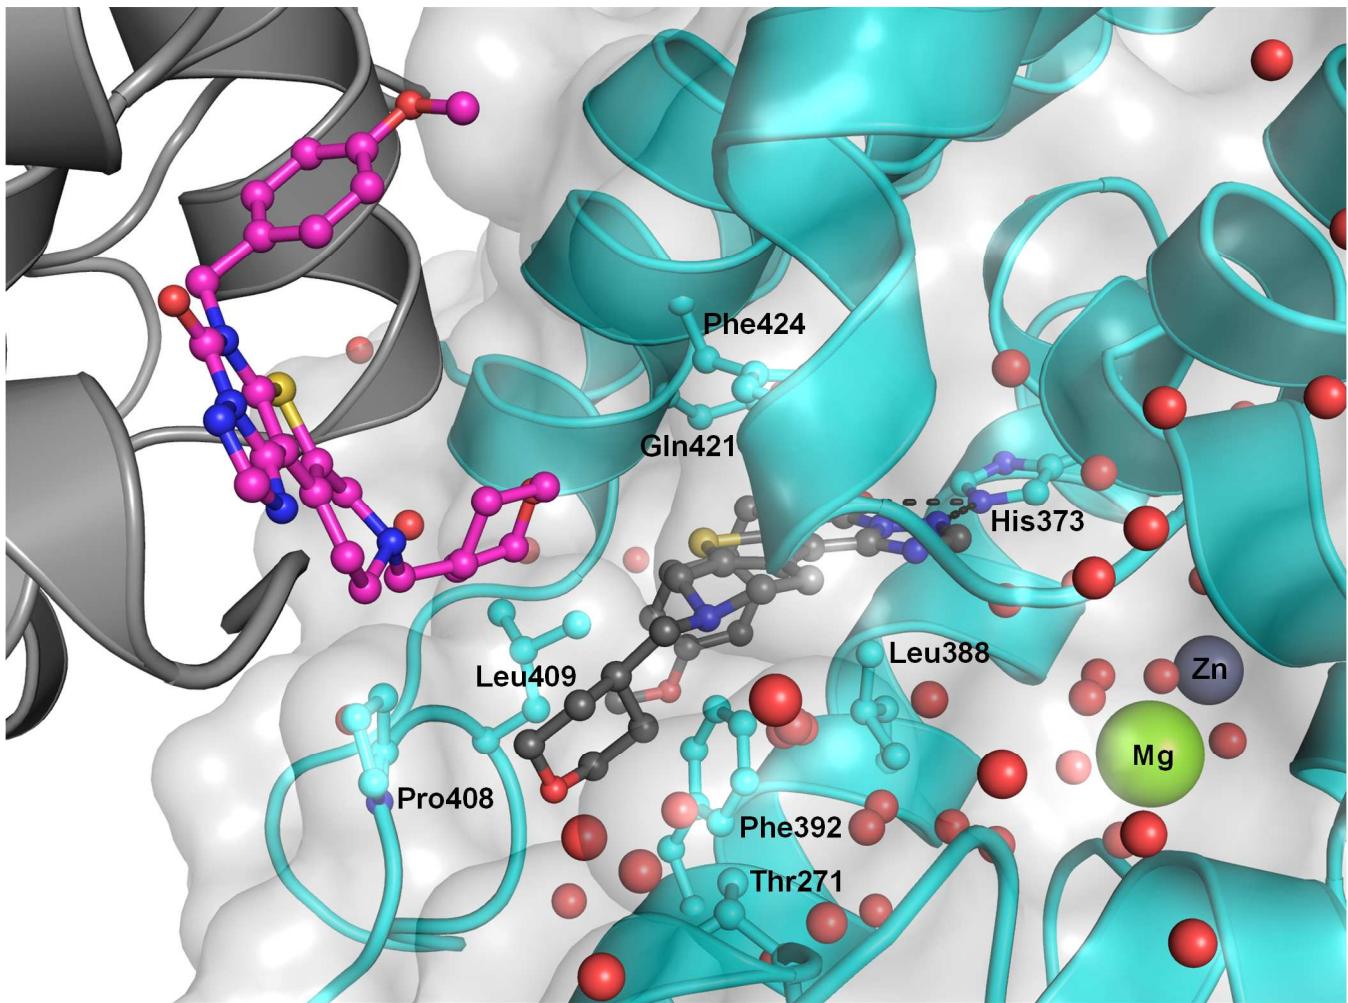

FIGURE S1. Crystal packing in the crystal structure of **16j** bound to the catalytic domain of PDE1B. A second **16j** molecule (magenta) is bound between two crystal symmetry related protein molecules (teal and gray cartoon). The position of the tetrahydropyranylmethyl group of **16j** bound in the active site could potentially be influenced by the presence of the second **16j** molecule. Key residues are labeled, including the hydrophobic clamp (Phe424 and Leu388).

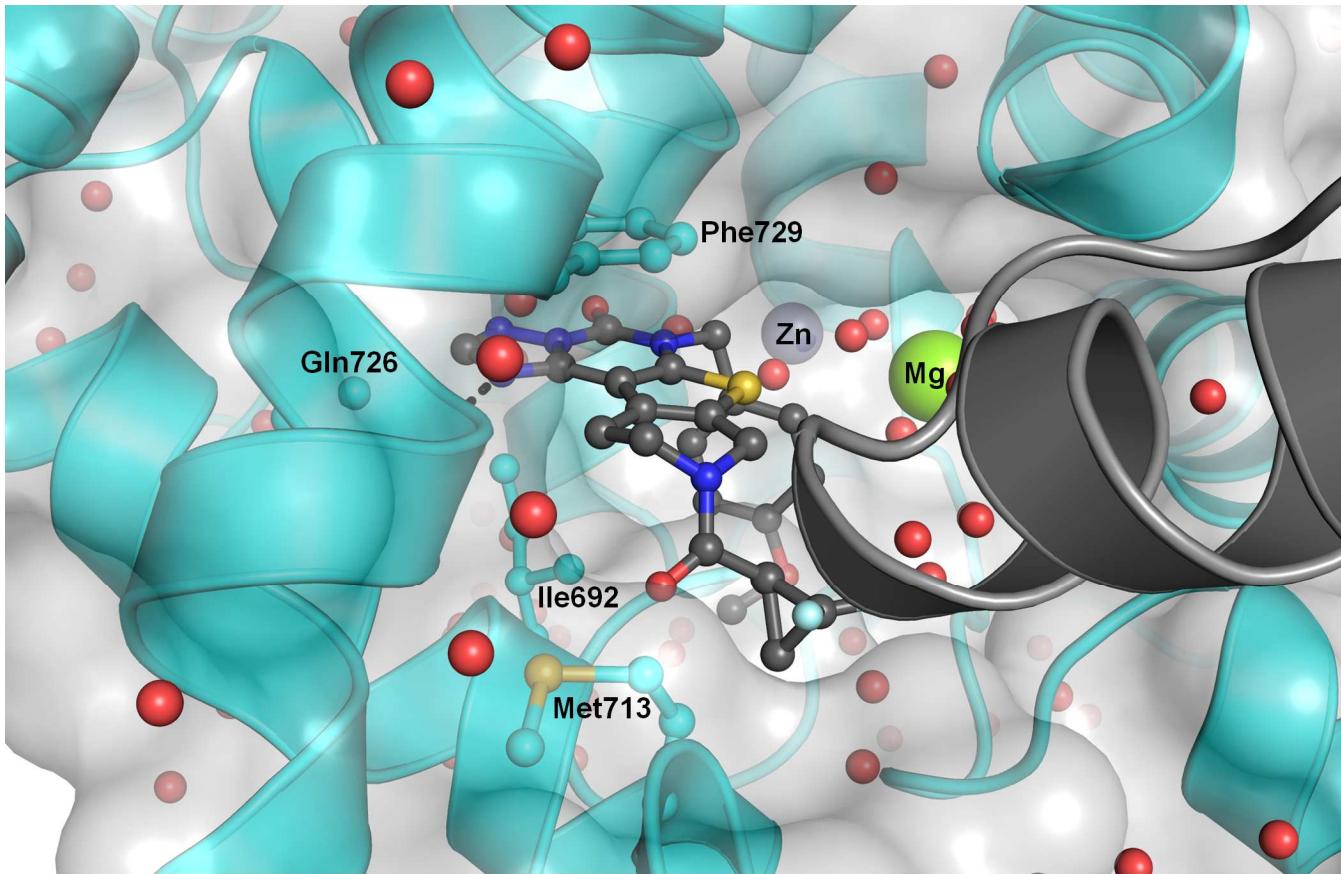

FIGURE S2. Crystal packing in the crystal structure of **16d** bound to the catalytic domain of PDE10A. The position of the carboxamide arm of **16d** in chain B is influenced by the presence of the crystal symmetry related protein molecule (gray cartoon). Key residues are labeled, including the hydrophobic clamp (Phe729 and Ile692).

Ricerca Biosciences, LLC has an exclusive, worldwide limited use license from Synaptic Pharmaceutical Corporation to perform these assays: Adrenergic Alpha 1D, Adrenergic Alpha 2B, and Dopamine D5 for safety and selectivity profiling. Ricerca's license excludes performing those assays in connection with drug discovery or development activities where the principal therapeutic mechanism of action of the test compound involves selective binding to a licensed receptor. Customers may contact Synaptic directly if they believe they need a broader license.
