${ }^{1} \mathrm{H}$ NMR and ${ }^{13} \mathrm{C}$ NMR spectra were recorded on Bruker DRX-500 spectrometer equipped with a 5 mm BBO-Z-gradient probe, a Bruker AV-500 spectrometer equipped with a 5 mm TCI gradient cryo probe. All NMR spectral data were collected at 300 K and the chemical shift values reported here are with respect to an internal TMS standard for $\mathrm{CDCl}_{3}$, and to a residual solvent signal for DMSO- $d_{6}$ and $\mathrm{CD}_{3} \mathrm{NO}_{2}$. Melting points were determined on a Yanaco MP-500V micro melting point apparatus. ESI-TOF-MS and CSI-TOF-MS spectra were measured on a Bruker maXis. The data analysis of mass spectra were processed on a Bruker Data Analysis (Version 4.0 SP 2) software and the simulations were performed on a Bruker IsotopePattern software. IR spectra for organic compounds were recorded with a JASCO FT/IR-6700 spectrometer. Optical rotation was measured with JASCO P-2200. Preparative size-exclusion chromatography (SEC) was carried out using a LC-908 (JAI) equipped with JAIGEL 1H and 2H columns (eluent: chloroform). Reagents and solvents were purchased from TCI, WAKO Pure Chemical Industries, Sigma-Aldrich or Kanto Chemical. $\left[\mathrm{Pd}\left(\mathrm{CH}_{3} \mathrm{CN}\right)_{4}\right]\left(\mathrm{BF}_{4}\right)_{2}$ was purchased from Strem Chemicals. All the chemicals were of reagent grade and used without any further purification.

- Synthesis of Ethyl 2-(2,6-dibromophenoxy)acetate (9):

2,6-dibromophenol $8(5.04 \mathrm{~g}, 20.0 \mathrm{mmol})$ and $\mathrm{K}_{2} \mathrm{CO}_{3}(4.15 \mathrm{~g}, 30.0 \mathrm{mmol})$ were dissolved in DMF ( 60 mL ). Ethyl bromoacetate $(2.44 \mathrm{~mL}, 22.0 \mathrm{mmol})$ was added, and the resulting mixture was stirred at room temperature for 16 h . The reaction mixture was diluted with $\mathrm{H}_{2} \mathrm{O}(200 \mathrm{~mL})$, and extracted with $\mathrm{AcOEt}(200 \mathrm{~mL})$. The organic layer was washed with $\mathrm{H}_{2} \mathrm{O}(3 \times 25 \mathrm{~mL})$, dried over anhydrous $\mathrm{MgSO}_{4}$, filtrated and evaporated under reduced pressure. The crude product was purified by column chromatography on silica gel $(\mathrm{AcOEt} / \mathrm{Hexane}=5: 95)$ to give the title compound $9(6.28 \mathrm{~g}, 18.6 \mathrm{mmol})$ as a colorless liquid in $93 \%$ yield.
