## 1. General Considerations

All chemicals were purchased from commercial sources with purities $\geq 95 \%$ and used without further purification. Tris(pentafluorophenyl)borane was purchased from TCI in a purity $>98.0 \%$ (NMR) and used without further purification. Deuterated solvents were ordered from Deutero GmbH and stored over molecular sieves. NMR spectra were received using Bruker 300 Fourier, Bruker AV 300 and Bruker AV 400 spectrometers. Chemical shifts are reported in ppm relative to the deuterated solvent. Coupling constants are expressed in Hertz ( Hz ). The following abbreviations are used: $s=$ singlet, $d=$ doublet, $t=$ triplet and $m=$ multiplet. NMR yields very determined by using mesitylene as internal standard. High resolution mass spectra (HRMS) were obtained either from a MAT 95 XP from Thermo (EI) or from an HPLC system 1200 and downstream ESI-TOF-MS 6210 from Agilent (ESI). Thin layer chromatography was performed on Merck TLC-plates with fluorescence indication (silica type 60, $\mathrm{F}_{254}$ ), spots were visualized using UV-light or vanilline. Column chromatography was performed using silica with a grain size of 40-63 $\mu \mathrm{m}$ from Macherey-Nagel.

## 2. General Procedures (GP)

Coupling reaction of aromatic and hetro-aromatic compounds with $\alpha, \beta$ unsaturated carbonyl-containing compounds:

A $25 \mathrm{~cm}^{3}$ pressure tube equipped with screw cap and stiring was charged with $\mathrm{B}\left(\mathrm{C}_{6} \mathrm{~F}_{5}\right)_{3}(51 \mathrm{mg}, 0.10 \mathrm{mmol} 5 \mathrm{~mol} \%)$ and dissolved in $\mathrm{CHCl}_{3}(2 \mathrm{~mL})$. Subsequently 1 equiv of the aromatic or hetro-aromatic compounds $1(2.0 \mathrm{mmol})$ and 2 equiv of the $\alpha$, $\beta$-unsaturated carbonyl-containing compounds $2(4.0 \mathrm{mmol})$ were added. The reaction mixture was stirred for 24 h at $80^{\circ} \mathrm{C}$. The rection mixture was cooled to room temperature and directly purifite by column chromatography (cyclohexane:ethyl acetate $=20: 1$ ). to afforded. After removal of all volatiles in vaccuo the desired products 3 were obtained.
