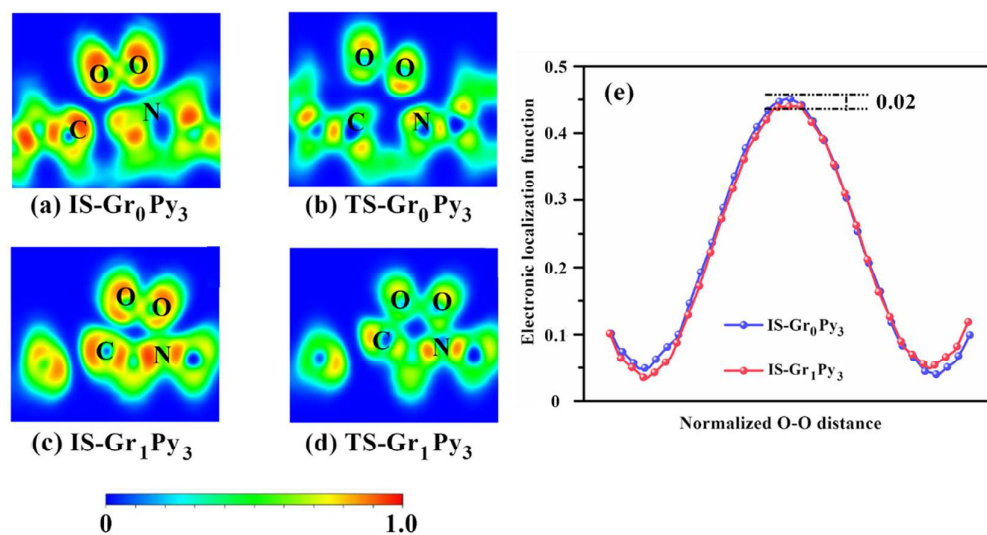

**Figure S1.** Possible local structure and doping energy ( $E_d$ ) of different N doped GP. Blue (grey) spheres depict N (C) atoms. (a) Pristine GP; (b)  $\text{Gr}_0\text{Py}_3$ ; (c)  $o\text{-Gr}_1\text{Py}_3$ ; (d)  $m\text{-Gr}_1\text{Py}_3$ ; (e)  $p\text{-Gr}_1\text{Py}_3$ . Negative means heat release.

**Figure S2.** Calculated band structures (a, b) and Total density of states (c, d) of Gr<sub>0</sub>Py<sub>3</sub> and Gr<sub>1</sub>Py<sub>3</sub>, respectively. The Fermi level is set to 0 eV.

**Figure S3.** Minimum energy pathway (MEP) of  $\text{O}_2$  activation reactions (OAR) by  $\text{Gr}_0\text{Py}_3$  (a),  $\text{Gr}_1\text{Py}_3$  (b),  $\text{Gr}_2\text{Py}_3$  (c) and  $\text{Gr}_3\text{Py}_3$  (d).  $E_b$  and  $E_r$  stand for the energy barrier and reaction energy respectively. Red, blue and grey spheres depict O, N and C atoms. All lengths are given in Å.

**Figure S4.** The electronic localization function (ELF) for  $O_2$  molecules in the initial state (IS) and transition (TS) of the OAR in  $Gr_0Py_3$  (a, b) and  $Gr_1Py_3$  (c, d). The line profile of ELF for IS of the OAR in  $Gr_0Py_3$  and  $Gr_1Py_3$  (e).

**Figure S5.** Minimum energy pathway (MEP) of  $\text{SO}_2$  oxidation reactions 1 (SOR1) by  $\text{Gr}_0\text{Py}_3$  (a),  $\text{Gr}_1\text{Py}_3$  (b),  $\text{Gr}_2\text{Py}_3$  (c) and  $\text{Gr}_3\text{Py}_3$  (d).  $E_b$  and  $E_r$  stand for the energy barrier and reaction energy respectively. Red, blue and grey spheres depict O, N and C atoms. All lengths are given in Å.

**Figure S6.** Minimum energy pathway (MEP) of  $\text{SO}_2$  oxidation reactions 2 (SOR2) by  $\text{Gr}_0\text{Py}_3$  (a),  $\text{Gr}_1\text{Py}_3$  (b),  $\text{Gr}_2\text{Py}_3$  (c) and  $\text{Gr}_3\text{Py}_3$  (d).  $E_b$  and  $E_r$  stand for the energy barrier and reaction energy respectively. Red, blue and grey spheres depict O, N and C atoms. All lengths are given in Å.
