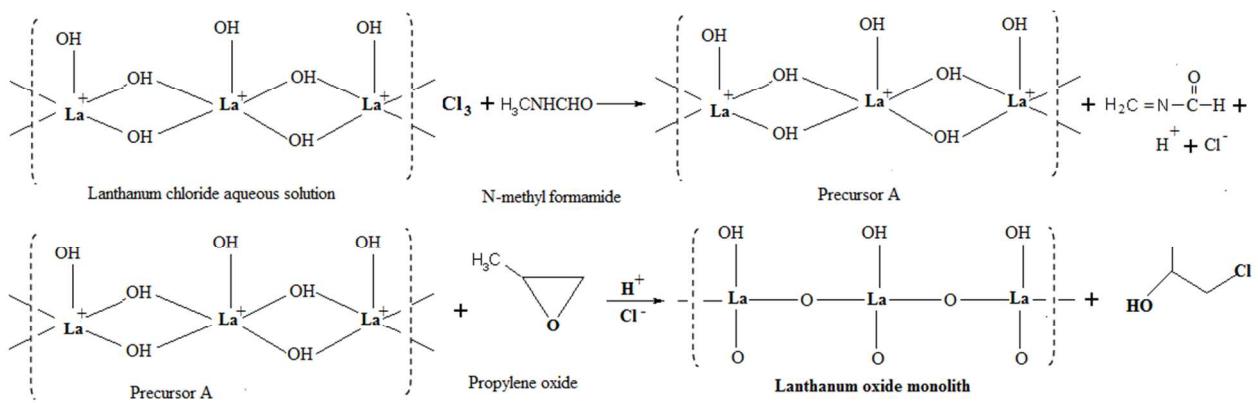

Figure S1: Mechanism of monolithic synthesis using lanthanum chloride as precursor, n-methyl formamide as porogen and propylene oxide as initiator.

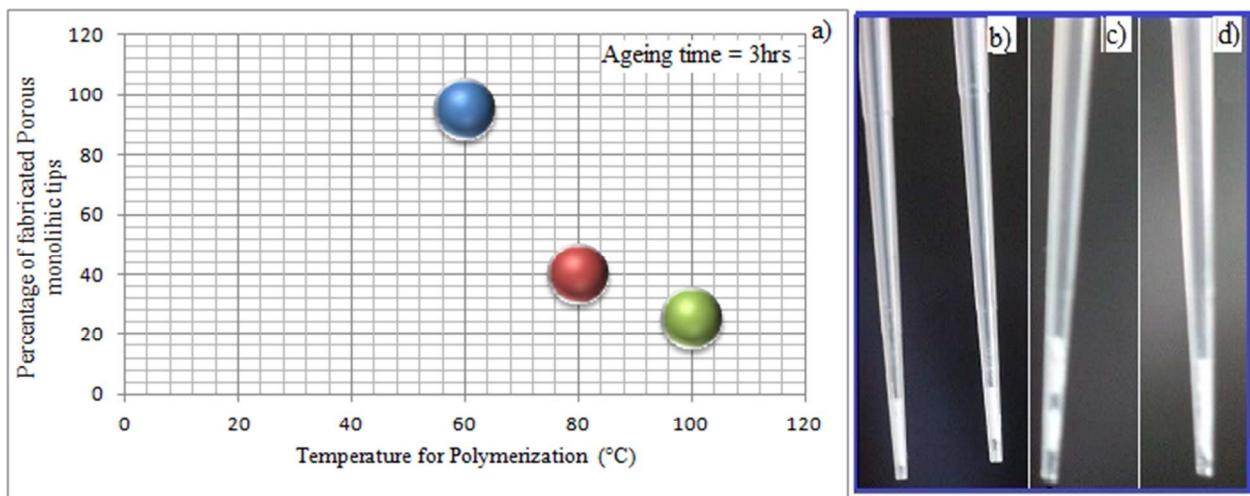

Figure S2: (a) Graphical representation of experiments performed for temperature optimization, (b) monolithic tip at 60 °C with stable bed and porosity, (c) at 80 °C with breakage in the bed and (d) at 100 °C with no porosity.

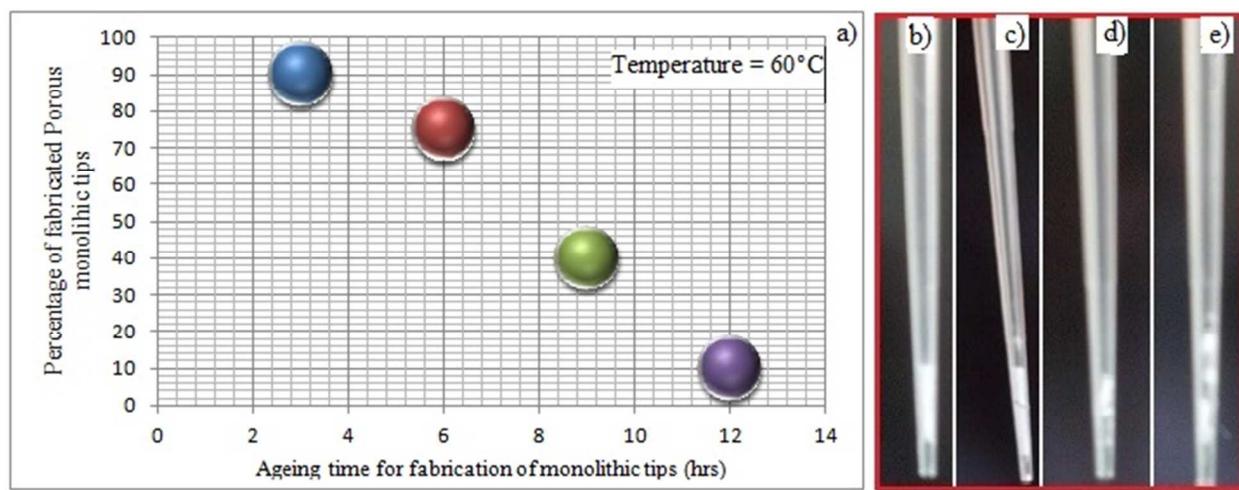

Figure S3: (a) Graphical representation of experiments performed for ageing time optimization
 (b) Monolithic tip aged for 3 hours (stable and porous), (c) aged for 6 hours (d) aged for 9 hours
 (unstable bed) and (e) aged for 12 hours (unstable bed).

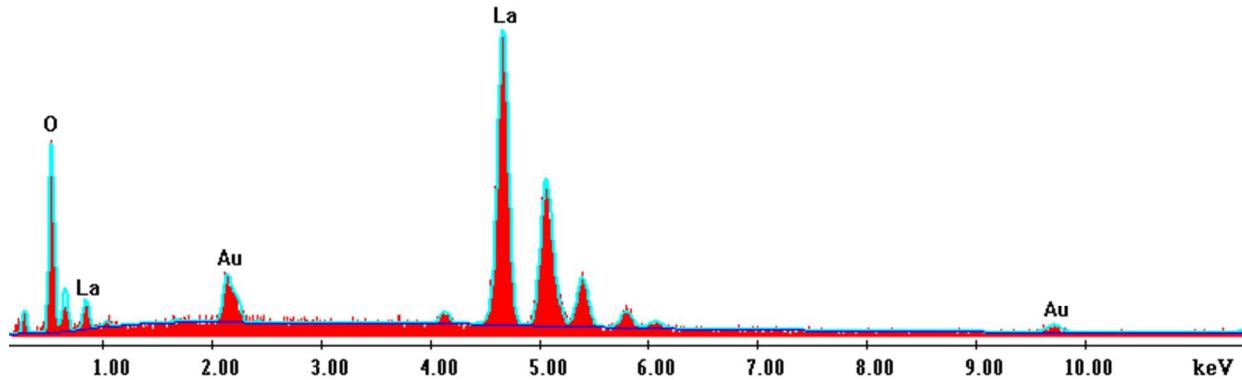

Figure S4: EDX analysis of lanthanum oxide monolithic tip. The contamination from Au is from the instrument sampling.

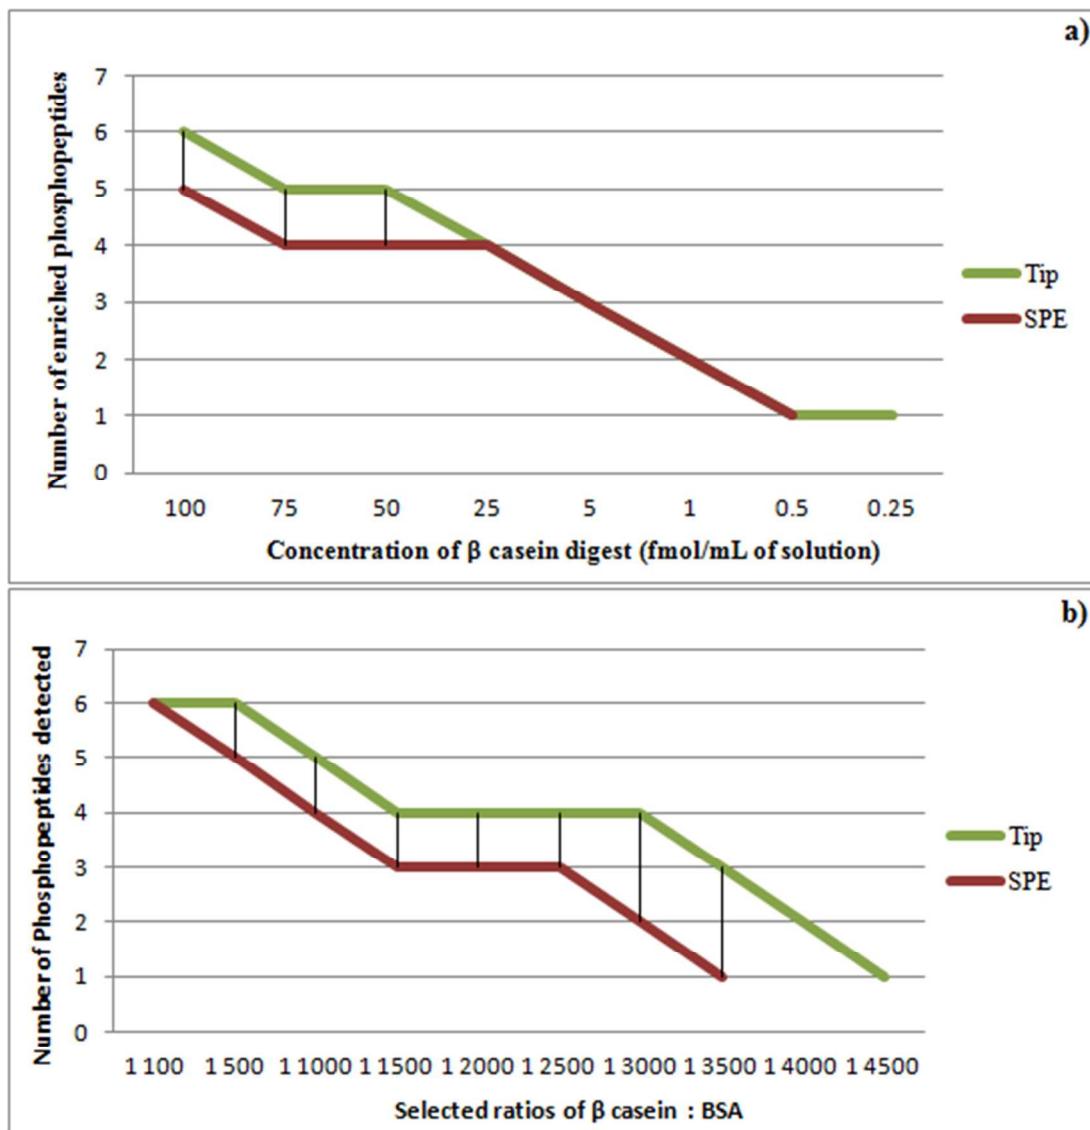

Figure S5: Graphical representation of data collected from (a) sensitivity and (b) selectivity studies performed using La_2O_3 monolithic tip and La_2O_3 as SPE. The experiments are performed using β -casein digest diluted to different concentrations for sensitivity and spiked in BSA digest for selectivity studies.

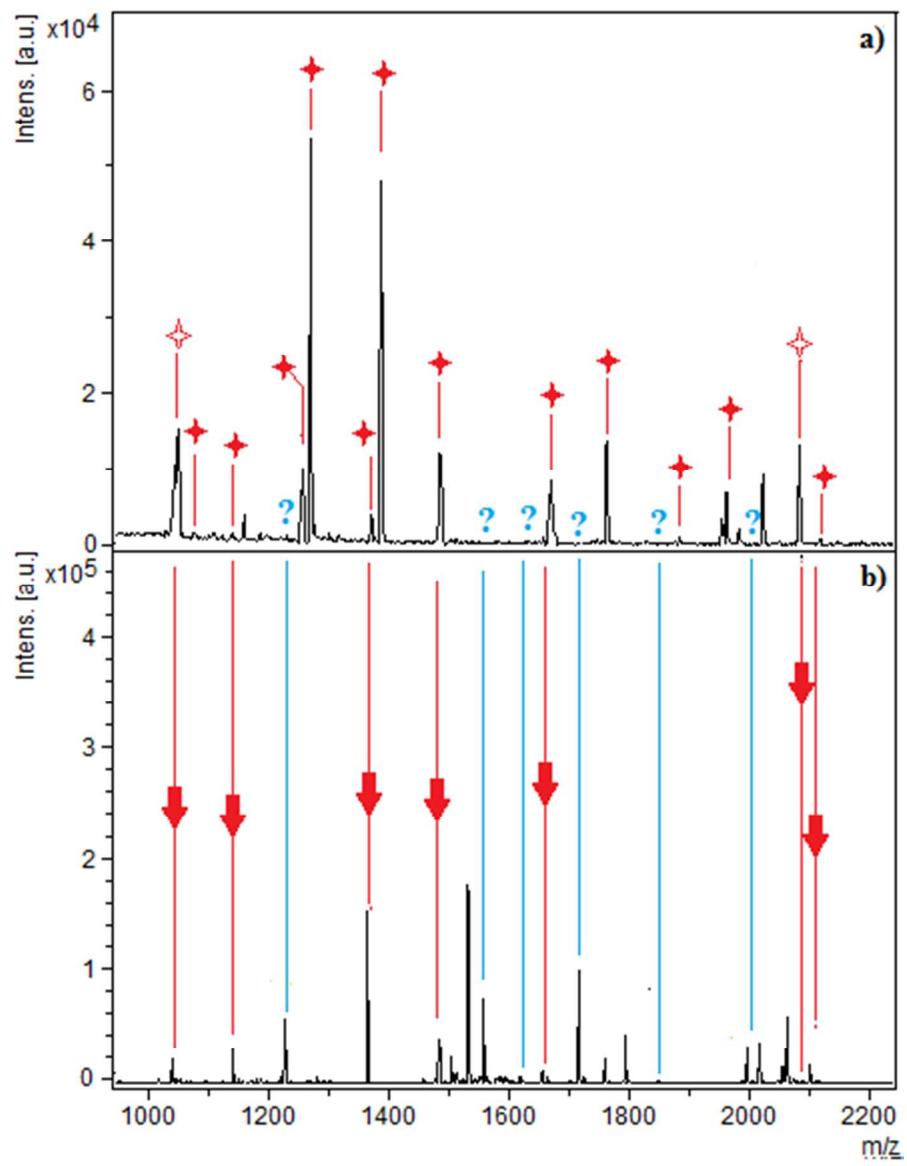

Figure S6: Comparative MS analysis of egg yolk digest applied to La_2O_3 as SPE material (a) first elution and (b) La_2O_3 spotted after first elution. The retained phosphopeptides from phosvitin and lipovitellin onto the SPE material after first elution are shown with blue lines. Red lines with arrows and red stars indicate phosphopeptides before and after elution.

Table S1: Comparative view of enrichment performance by in tip embedded polymers with metal oxides (TiO_2 , ZrO_2 and La_2O_3) and in-tip lanthanum oxide after enrichment using β -casein digest.

m/z	Peptide Sequence	Krokhin_NET Hydrophobicity	poly(GMA/ DVB)	poly(GMA/ DVB) TiO_2	poly(GMA/ DVB) ZrO_2	poly(GMA/ DVB) La_2O_3	in- tip La_2O_3

Table S4: Phosphoproteins identified from serum digest after enrichment with La₂O₃ monolithic tip using the bottom up approach. Phosphorylation at serine, threonine and tyrosine is represented as S*, T* and Y* respectively. Oxidation at methionine (Oxi M) is given as M#. Phosphorylation sites are confirmed from Phosphosite plus.
